FCC INFORMATION

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
Reorient or relocate the receiving antenna.
Increase the separation between the equipment and receiver.
Connect the equipment into an outlet on a different electrical circuit from th. receiver.
Consult the dealer or an experienced radio/TV technician for help.

* This instrument complies with the limits for a class B digital apparatus, pursuant to the Radio Interference Regulations, C.R.C., c. 1374.

This musical instrument is designed for household use, not commercial use.

FCC Information

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and the receiver.

Connect the equipment into an outlet on a different electrical circuit from the receiver.

Consult the dealer or an experienced radio/TV technician for help.

Canadian Radio Interference Regulations

This instrument complies with the limits for a class B digital apparatus, pursuant to the Radio Interference Regulations, C.R.C., c. 1374.

Important Safety Instructions

* Read Instructions – This Owner's Manual contains valuable information that will help you make full use of the instrument's many capabilities. All the safety and operating instructions should be read before the product is operated.

* Retain Instructions – The safety and operating instructions should be retained for future reference.

* Heed Warnings – All warnings on the product and in the operating instructions should be adhered to.

* Follow Instructions – All operating and use instructions should be followed.

* Water and Moisture – The appliance should not be operated or stored near water or other moisture - for example, near a bath tub, wash bowl, kitchen sink, or laundry tub; in a wet basement; or near a swimming pool; and the like.

* Power Cord Protection - Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the product.

* Ventilation – The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be situated on a bed, sofa, rug, or similar surface that may block the ventilation openings; or similar surface that may block the ventilation openings; or placed in a built-in installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.

* Heat – The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.

* Noise – Keep the appliance away from electrical motors, neon signs, fluorescent light fixtures, and other sources of electrical noise.

* Shocks – Protect the appliance from physical shocks and impact. Never move it while it is in operation.

* To reduce the risk of injury, close supervision is necessary when a product is used near a children.

* Do not touch the power plug with wet hands. There is a risk of electrical shock. Treat the power cord with care as well. Stepping on or tripping over it can break or short-circuit the wire inside.

* Do not place this product on an unstable or slant cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the product. Besides, the unit may malfunction. Use only with a cart, stand or table recommended by KAWAI, or sold with the product.

* The appliance, in combination with an amplifier and speakers or headphones, may be capable of producing sound levels that could cause permanent hearing loss. Do not operate for a long period of time at a high volume level or at a level that is uncomfortable. If you experience any hearing loss or ringing in the ears, you should consult an audiologist.

* This product may be equipped with a polarized line plug (one blade wider than the other). This is a safety feature. If you're unable to insert the plug into the outlet, contact an electrician to replace your obsolete outlet. Do not defeat the safety purpose of the plug.

* Always turn the power off when the appliance is not in use. The power supply cord of the product should be unplugged from the outlet when left unattended or unused for long period of time. Otherwise, fire or other hazards may be caused due to lightning and power-line surges, etc.

* Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings.

* Unplug the appliance and power supply cord from the wall outlet immediately and refer servicing to qualified service personnel under the following conditions:

a) When the power-supply cord or plug is damaged.
b) If liquid has been spilled, or objects have been fallen into the product.
c) If the product has been exposed to rain or water.
d) If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by this manual as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation.
e) If the product has been dropped or damaged in any way.
f) When the product exhibits a distinct change in performance - this indicates a need for service.

* Protect the product from direct sunlight, extremes in temperature (such as inside your car on a warm day) or humidity, dusty environment, or vibration (especially during transportation).

* Always turn down the volume(s) of all instruments (such as guitar or keyboard) before connecting or disconnecting to the instrument.

* Make sure that all POWER switches are off before changing equipment connections.

* Check all equipment connections before applying the power.

* Do not connect to the same circuit as a heavy load or equipment that generates line noise.

* Unplug this product from the wall outlet before cleaning.

* Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning. (Clean the instrument with a soft cloth, a mild detergent, and lukewarm water.) Never use harsh or abrasive cleansers or organic solvents.

* Servicing – The user should not attempt to service the appliance beyond that described in the operating instructions. All other servicing should be referred to qualified service personnel.

* Do not disassemble or attempt to modify the appliance. Opening or removing covers may expose you to dangerous voltage.

APPENDIX _____ 159

WELCOME TO THE K5000W

The K5000W is an Advanced Additive Workstation that combines complete music composition/ performance capabilities into a single unit.

PERFORMANCE SOUND GENERATORS

ADVANCED ADDITIVE TONE GENERATOR
The K5000 series updates the famous K5 synthesizer tone generator and its unique additive harmonic synthesis approach. The ADD Tone Generator contains 32 source generators, which depending on how they are used, can yield up to 32 voice polyphony.

PCM samples can also be mixed with additive sources. As few as one or as many as six sources can be used to make a single sound. For example, a PCM wave of a piano hammer can be superimposed with the sound of the piano string created by additive harmonics.

PCM/GM TONE GENERATOR
In addition to the additive capabilities, the K5000W contains a second tone generator that utilizes traditional subtractive PCM synthesis techniques. This tone generator is also fully General MIDI compatible to ensure compatibility with other MIDI instruments. The PCM Tone Generator adds another 32 source generators, which can give an additional 32 voices of polyphony. This results in a maximum possible polyphony of 64 voices.

DIGITAL EFFECTS SYSTEM
The K5000W contains an advanced digital effects processor (DSP), which allows four individual effects of chorus, delay, distortion, etc., in addition to reverb and a graphic equalizer.

When playing a single sound, individual *sources* can be routed to individual effects; when playing multiple sounds in Compose mode, individual *sounds* can be routed to individual effects.

COMPOSING TOOLS

SEQUENCER
A 40-track MIDI sequencer can control 32 simultaneous timbres within the K5000W. The sequencer can also control multiple external MIDI devices at the same time, using its two MIDI outputs.

APG COMPOSING TOOL
The Auto Phrase Generator (APG) uses a track from the sequencer and creates a complete orchestration in any of over one hundred musical styles.

GENERAL MIDI
When the K5000W receives a General MIDI Initialize command, it automatically jumps into Compose Mode and configures itself as a General MIDI synthesizer. So whether you're playing your favorite songs, singing Karaoke, or cruising the World Wide Web, the K5000W is your willing musical accompanist.

IF YOU NEED HELP...

Please consult your local Kawai representatives or contact with Kawai distributors in your country.

ABOUT THE KEYBOARD'S INTERNAL MEMORY

The contents of the keyboard's internal memory (such as tone data) and system data may be lost if you turn off the power while saving, loading or writing data.

Do not turn off the power while saving, loading or writing data.

If you lost system data, follow the procedure of the included SYSTEM DISK and load system data.

Internal song data may be lost when you load data from a disk. You may not be able to back up the internal memory. So, we recommend that you save your important data on a floppy disk.

ABOUT THE MEMORY EXPANSION KIT

MEMORY EXPANSION KIT may be available in your country. If you need it, please consult your local Kawai representatives or contact with Kawai distributors in your country.

K5000W FRONT PANEL

COMMON SECTION
These keys are used for functions common to all modes of operation

SEQUENCER SECTION
These keys control the on-board sequencer in COMPOSE mode.

MODE
In PERFORM mode, you can play the keyboard and adjust sounds.
In COMPOSE mode, you can use the on-board sequencer
to create your own music.

VOLUME CONTROLS
These control the output level of the instrument.
There is one for each pair or outputs.

INDIVIDUAL OUTPUTS
Mono or Stereo, individual sounds
can be routed to these outputs.
If not connected, these signals appear
at the Main Output.

GUIDED TOUR

The K5000W operates in two modes: Performance Mode for creating sounds, and Compose Mode for creating music. You can choose between them using the Mode buttons on the left side of the front panel.

CONNECTIONS

Naturally, the first thing you ought to do with your K5000W is plug it in!

POWER

Using the cable provided, connect the POWER jack to a *grounded* AC outlet.

Power Specifications

North America:	110V–120V	50/60Hz
Europe/Asia/Australia:	220V–240V	50/60Hz

AUDIO

There are two pairs of audio output jacks on the back, plus the PHONES jack on the front (in front of the Pitch Bend wheel). This gives you a few choices, depending on what you're connecting to:

SOLO PLAY
Just plug your headphones into the PHONES jack on the front and go at it. There's plenty of power for phones. Use the MAIN volume slider to control the volume.

INSTRUMENT AMPLIFIER
If you are plugging into an amp, connect the MAIN L/MONO output jack on the rear panel to your amplifier. All sounds will be mixed to this single cable.

STEREO SYSTEM
To connect to a music system or amplified speakers, use the *two* MAIN outputs (L & R) to get stereo. You'll need adapters or adapting cable to convert the 1/4" Phone jacks on the K5000W to the RCA pin jacks on your stereo. Make sure to connect the K5000W to a LINE, AUX, or TAPE input on your stereo.

MIXING CONSOLE
If you've got more than two inputs available, by all means connect the two MAIN outputs *and* the two INDIVidual outputs to your mixer. In this way, you can route certain sounds (piano, ss·ôngs, snare drum) through the reverb unit to the Main Outputs; and send others (bass drum, bass guitar) directly to the INDIVidual outputs *without* reverb, or for special studio processing.

When connections are made to the INDIVidual output jacks, the INDIVidual volume slider on the front panel becomes active. You can adjust each pair of outputs independently.

PEDALS

HOLD
Connect a Hold pedal to the HOLD jack on the rear panel. Use a Momentary On footswitch, like the Kawai model F-1. This acts like a piano-style damper pedal, sustaining after releasing keys.

EXPRESSION
You can connect a Volume pedal (Kawai model V-20X) to the EXPression jack on the rear panel.

SPEAKERS OR SOUND SYSTEM
MIDI

There are six MIDI ports on the rear panel of the K5000W: two pairs each of IN, OUT, and THRU jacks. You don't need to connect *any* of them to create a musical masterpiece – the K5000W has everything built in – but if you want to talk to your other MIDI gear, here's how to connect them:

ADDITIONAL SOUND MODULES
If you want to use the K5000W to control other sound modules, connect a cable from one of the K5000W's MIDI OUT jacks to the MIDI IN jack of the other device. If you have more than one device, you can connect one to each MIDI OUT jack or loop from the MIDI THRU of the first device to the MIDI IN of the second.

EXTERNAL KEYBOARD OR DRUM CONTROLLER
If you want to play the K5000W from another keyboard, MIDI drum or Guitar controller, connect it to one of the MIDI IN jacks.

You will need to set the K5000W's Unit Channel to match the input jack and the MIDI channel the device transmits on. Press SYSTEM, then MIDI (F5), then Unit CH (L2).

SLAVING A DRUM MACHINE OR ANOTHER SEQUENCER
Besides notes, a drum machine or sequencer also needs to communicate *timing* with the K5000W sequencer. The K5000W supports MIDI Beat Clocks, which transmit tempo as well as start and stop commands.

NOTE:
A drum machine or sequencer must be connected to the MIDI A jack, the MIDI B jack does not transmit MIDI clock information.

PLAY THE DEMO

Now that everything is connected, lets see what the K5000W can do!

In the package with your K5000W is a demonstration diskette (supplement disk). Playing this will give a good picture of the K5000W's capabilities.

PLAYING A SONG DIRECTLY OFF THE DISK

- Insert the floppy disk (supplement disk) into the disk drive on the left side of the instrument.
- Press the COMPOSE button on the left side of the instrument.
- In the SEQUENCER section to the left of the LCD display, press DISK PLAY. The following screen appears.

```
Direct Disk Play

> Song    Interface      04/04   Tempo=100  <
                         REP OFF   CHN OFF   <

CH01  CH02  CH03  CH04  CH05  CH06  CH07  CH08
 ON    ON    ON    ON    ON    ON    ON    ON
```

- Press the L1 key (Song) and turn the Value dial until the desired song is listed.
- Press the START button. The disk light will flash, and after a moment the song will start.

PERFORMANCE MODE

Press the PERFORM key on the front panel to enter Performance Mode.

Performance Mode is where you play sounds live from the keyboard. Performance Mode is also where the K5000W's wide range of synthesis capabilities are available for your creative sound editing.

```

```
SINGLE SOUNDS

The K5000W contains three banks of Single sounds. The banks are organized into groups of 10 patches. Each bank is unique in its own way.

A BANK
This is the ADD additive synthesis bank. There are up to 120 patches available in A Bank, but the patch memory can used up by fewer complex patches. There are 60 *preset* patches in this bank.

B BANK
This is the PCM synthesis bank. There are always 128 patches in this bank – with the last 12 (B117 – B128) dedicated for drums. There are 48 user editable locations in this bank.

GM BANK
This is the General MIDI bank. There are 128 *preset* patches in this bank.

CHOOSING A SINGLE SOUND

- Choose a bank: A, B, or GM, using the SINGLE buttons on the front panel.
- Choose a group: press one of the buttons labeled 00 – 12 on the front panel. A menu of the patches in the group appears on the screen.

```
┌─────────────────────────────────────────┐
│ Single Bank Menu                         │
│                       A005  Driver        │

│ │Cutf│Reso│Vel │Atak│Decy│Rels│EFX │Back││
└─────────────────────────────────────────┘
```
MODIFYING A SOUND

There are sliders on the screen of each patch, as shown in the illustration above. Push the button underneath the desired slider, then change the value with the VALUE dial. The slider image will also move according to your adjustment.

These do not change the preset values of the patch, which can only be changed by *editing* the patch – described starting on page 29.

The patches in A Bank have two pages of sliders – use the More and Back keys to switch pages.

COMBI SOUNDS

Combi Patches are *combinations* of up to four Single patches. They can be arranged in layers, key splits, velocity splits, or any combination.

No matter how they are arranged, Combis are designed to be played *as a group*. The entire combi responds to a single MIDI channel. Multi-timbral / multi-channel arrangements are done in the Compose Mode.

CHOOSING A COMBI

There are 64 Combi patches, C01 – C64.

- Choose the Combi bank: press the COMBI button on the front panel.

- Choose a group: press one of the buttons labeled 00 – 06 on the front panel.
  A menu of the patches in the group appears on the screen.

```
Combi Bank Menu

 C10   Komradds      C15   E-Normus
 C11   Addalogg      C16   Raunch
 C12   Addalog2      C17   TakeOver
 C13   CashFlow      C18   Frostbyt
 C14   WINBRASS      C19   Wilder
```

- Choose a patch: press one of the buttons labeled 0 – 9 on the front panel.
  An individual Combi patch appears on the screen.

```
 C07          Moonrise
Chimera   Runner    SynStrg1  GOOM
   1         2         3        4
 Trns Vol   Trns Vol  Trns Vol  Trns Vol
```

MODIFYING A COMBI

On the screen there are Transpose and Volume sliders for each Section, as shown in the illustration above. Push the button underneath the desired slider, then change the value with the VALUE dial. The slider image will also move according to your adjustment.

These do not change the preset values of the patch, which can only be changed by *editing* the Combi patch – described starting on page 71.

COMPOSE MODE

Press the COMPOSE key on the front panel to enter Compose Mode.

Compose Mode is where the composer, arranger, and producer put their music together, orchestrating single sound patches into a multi-timbral canvas of color. Compose Mode is also where music recording, editing, and playback are done, with internal sounds as well as controlling external MIDI devices. The K5000W is also a General MIDI compatible sound generator, and jumps into Compose Mode whenever a General MIDI System On message is received.
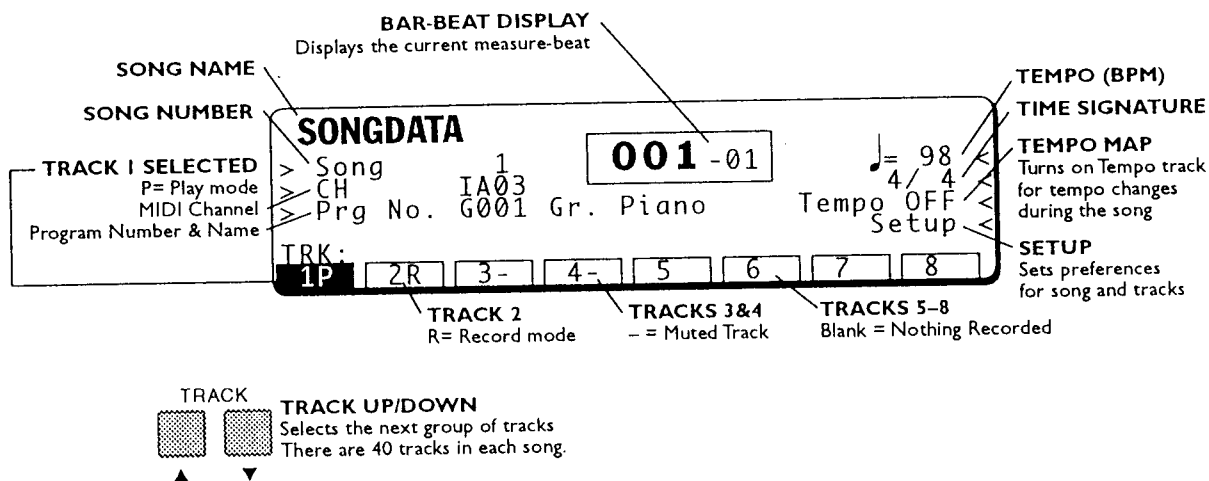

LOADING A SONG INTO MEMORY

On page 16, we played the demo song directly off the disk. If we load the song into memory, we can modify it or add additional parts.

- Insert the floppy disk (supplement disk) into the disk drive on the left side of the instrument.
- In the COMMON section to the left of the LCD display, press DISK. The following screen appears.

```
Disk                           Menu

> Save                         Delete <
> Load                         Format <
```
- Press the L2 key (Load), then the R1 key (Song). The following screen will appear.

```
Disk Load                        Song
> Format      OWN     Song No.      1 <
      Demo1      Demo2      Demo3
      Demo4      Demo5
File                       . KSO    Exec
```
- Press the L1 key (Format), and turn the Value dial until the format reads SMF.
- Press the F1 key (File), and turn the Value dial until the desired song is highlighted.
- Press the F8 key (Exec). *Sure?* Press the F8 key (Yes) to continue.
- The screen says EXECUTING... while the song is loaded from the diskette. When loading is finished, the screen will change to COMPLETED!

PLAYING A SONG FROM MEMORY

- Press the EXIT key, then the COMPOSE button on the left side of the front panel. This brings up the K5000W's sequencer.

```
┌─────────────────────────────────────────────┐
│ SONGDATA                                      │
│ > Song      1    ┌─────────┐    ♩= 98    <    │
│ > CH      IA03   │ 001 -01 │      4/ 4   <    │
│ > Prg No. C001 Gr. Piano   Tempo OFF     <    │
│                              Setup       <    │
│ TRK.                                          │
│ ┌1P┐┌2R┐┌3┐┌4┐┌5┐┌6┐┌7┐┌8┐                    │
└─────────────────────────────────────────────┘
```
- Press the START button in the sequencer section of the front panel. The START button will light up green and the song will play. When completed, the light will go out.

SONG INFORMATION
As the song plays, you will see the bars and beats ticking in the center of the screen.

At the bottom of the screen is information for each track. Press the Function keys (F1 – F8) to select a track, the color will reverse indicating it is selected. Once selected, you can turn the track off (mute) or on by pressing the function key again. You can turn tracks on and off while the song plays.

CHANGING SOUND PATCHES
As you select different tracks, the channel and program will be displayed on the screen (see the picture on the previous page.) You can temporarily change a track's sound patch by pressing the L3 button to the left of the screen and turning the Value dial.

ERASING A SONG FROM MEMORY

This is easy. Song memory is not maintained when power is off, so when the K5000W is turned off, all songs are erased.

Naturally, you'll want to learn how save your new song to disk *before* you turn off the power – that's covered on the next page.

REAL TIME RECORDING

Lets start with a fresh song, and record a track.

FROM THE COMPOSE MODE MAIN SCREEN:
- Press the REC button – it lights up, red.

- Press the F1 key to put track 1 into record. The label above the F1 key should now indicate "1R".

- Press the START button near the REC button – this starts the recording – the START key also lights up, green (both REC and START should be lit), and the Metronome bell starts counting time.

- Play the keyboard.

- When you have finished recording, press STOP.

- To listen back, press RESET then PLAY.

SETTING A COUNT IN

Few people can press START with their left hand, and simultaneously start recording with their right, so let's give ourselves two bars to get ready to record.

> **FROM THE COMPOSE MODE MAIN SCREEN:**
> * Press Setup (R4), then Count In (L1).
> * Turn the value dial, so that Count In shows 2.
> * Press the EXIT button to return to the main screen.

If you want to rerecord your first track, repeat the steps in the previous section – this time the bell will count off two bars before recording starts.

CHANGING THE TEMPO

You can change the tempo without changing the pitch of the notes – that's one of the big differences between recording MIDI and audio.

Press R1 to highlight the tempo setting, the use the Value dial to change it.

OVERDUBBING

Recording a new track in sync with the first track follows the same process as recording the original one.

> **FROM THE COMPOSE MODE MAIN SCREEN:**
> * Press the REC button – it lights up, red.
> * Press the F2 key highlight track 2, then press it again to put it into record. The label above the F2 key should now indicate "2R". The label above track 1 (F1) should read "1P", indicating that track 1 will play – if not, press F1 several times until it does.
> * You might want to change to a different sound before recording. Make sure track 2 (F2) is selected, then press L3 and turn the Value dial to change programs. You can play the keyboard to audition the sound.
> * Press the START button near the REC button – this starts the recording – the START key also lights up, green (both REC and START should be lit), and the Metronome bell starts counting time. You should also hear track 1.
> * Play the keyboard
> * When you have finished recording, press STOP.
> * To listen back, press RESET then PLAY.

SAVING YOUR SONG TO DISK

The K5000W does not save Song data while turned off, so it is imperative to save your data to disk before turning off the unit.

The K5000W uses standard DOS format 2DD and 2HD diskettes, that can be read by Windows and MacOS computers.

PROCEDURE:
- Press DISK, then Save (L1), then Song (R1). The following screen appears:
```
 Disk Save                        Song
> Format     SMF       Song No.        1 <
   !"#$%&'()*+,-./0123456789:;<=>?
   @ABCDEFGHIJKLMNOPQRSTUVWXYZ[D]
   `abcdefghijklmnopqrstuvwxyz[|]-
   <    >    SONGDATA  .MID    [Exec]
```

- Name your song by using the arrows (F1 & F2) and the Value dial.

- If you want to save your song as a Standard MIDI File instead of the K5000W's own file format, press Format (L1) and turn the value dial until the format is set to SMF.

- Press Exec (F8). *Sure?* Press Yes (F8) to continue.

- The song is saved to disk.

AUTO PHRASE GENERATOR (APG)

The Auto Phrase Generator, or APG, creates new musical parts based on a track recorded in the sequencer.

APG takes one of your recorded tracks, analyzes the chord changes, and then creates new parts based on your chord progression in the musical style of your choice. After calculating the new parts based upon your chords and the designated pattern, the APG copies those parts onto as many as eight tracks of your already existing song. You can then pick, choose and edit the parts just like tracks you recorded yourself.

CREATING A PHRASE

RECORD THE ORIGINAL TRACK
Use the sequencer to record a new track, just as before:

- Press the REC button – it lights up, red.

- Press the F1 key to put track 1 into record. The label above the F1 key should now indicate "1R".

- Press the START button near the REC button – this starts the recording – the START key also lights up, green (both REC and START should be lit), and the Metronome bell starts counting time.

- Play the keyboard.

- When you have finished recording, press STOP.

- To listen back, press RESET then PLAY.

ANALYZE THE TRACK
After our *seed* track is recorded, the next step is to analyze its chord structure.

- Press the APG button. The APG Seed Setting screen appears.

```
 APG                      Seed Setting
                          001-01  J-128
> Start Bar     001    Seed Track    01 <
> Length        025
  End Bar       025
                            [Antz][Cont]
```
- Press Length (L2), then turn the Value dial clockwise until the number stops changing. This is the total length of your track to be analyzed.

- Press Analyze (F7). The screen will read *EXECUTING* for a few seconds, then the Track Selection screen will appear.

```
APG                    Track Selection
                           001-01 ♩=120
> AC1  Tr04      AC4  Tr08              <
> SUB  Tr05      BAS  Tr09              <
> AC2  Tr06      DRM  Tr10              <
> AC3  Tr07      PRC  Tr11              <
Back                              Cont
```
- Press each track button (L1 – L4 and R1 – R4) twice, so that each part has a Track number and none of them are off.

CHOOSE A STYLE AND VARIATION

There are 107 rhythmic *templates* available, including two that you can create.

- Press Next (F8) to access the APG Data Selection screen.

```
APG                   APG Data Selection
                           001-01 ♩=120
 *TECHNO*   German    ContJazz    SoundTrk
 Japanese   HardCore  WestCost    FusionA
 French     TechnoA   ContLatn    FusionB
 Detroit    TechnoB   ContPop     FusionC
 Ambient    *CNTEMP*  Altnativ    FusionD
Back                              Cont
```
- Press the START button to play the selected APG Phrase. While the phrase is playing, you can select different templates using the value dial.

PASTE INTO SONG

If you want to paste the APG phrases into your song, press Continue (F8), then Paste (R4). The screen will read *EXECUTING* for a moment, then *COMPLETED!*

SAVE

SAVE YOUR NEW SONG USING THE SAME PROCEDURE AS BEFORE:
- Press DISK, then Save (L1), then Song (R1). The following screen appears:
```
Disk Save                          Song
> Format     SMF      Song No.        1 <
   !"#$%&'()*+,-./0123456789:;<=>?
   @ABCDEFGHIJKLMNOPQRSTUVWXYZ[0]_
   abcdefghijklmnopqrstuvwxyz{|}~
   <   >    SONGDATA   .MID     Exec
```

- Name your song by using the arrows (F1 & F2) and the Value dial.

- If you want to save your song as a Standard MIDI File instead of the K5000W's own file format, press Format (L1) and turn the value dial until the format is set to SMF.

- Press Exec (F8). *Sure?* Press Yes (F8) to continue.

- The song is saved to disk.

SINGLE SECTION

SINGLE PLAY

Pressing the PERFORM key on the left side of the keyboard brings up the Single Play window.

```
 B001        WidPiano
 ⊤⊤  ╫  ⊥  ╫  ╫  ╫  ╫
 +63 +7  0  -63  0  +2  -2  0
Cutf Reso Vel Atak Decy Rels EFX Rev
```
The name of the patch is displayed, as well as parameters which are described below.

CHANGING SINGLE PATCHES

To select a different patch, use the Patch Select keys 0 through 9 on the right side of the panel. To change banks, use the Patch Select keys 00 through 12. The Bank menu screen appears as shown below.
```
Single Bank Menu

                       A005  Driver
A001  Runner           A006  Reznator
A002  Gorgizmo         A007  Goom
A003  Dist Pulse       A008  Heaven
A004  Telmetal         A009  Creaturz
```

This screen lists the patches in the selected bank. To select one press the 0-9 key corresponding to the last digit of the patch number. A different patch will play, with the display as shown at the top of this section.

NOTE:
In Bank A, there is not a fixed number of patches. Instead there is a fixed *amount of memory* for the patches. If your patches are simple, more of them can be stored. As a result, all patch locations may not be available.

MODIFYING PATCHES

In Single Play mode, fourteen parameters are available for instant edit. Press one of the F keys as described below, then use the value dial to change the setting.

```
 A001        Runner
 ⊤⊤  ╫  ⊥  ╫  ╫  ╫
 +63 +63  0  -63  0  +2  -2
H-Lo H-Hi E/O FFBS FFSP FFDP Rev More
  |   |   |   |   |   |   |   |
 F1  F2  F3  F4  F5  F6  F7  F8
```
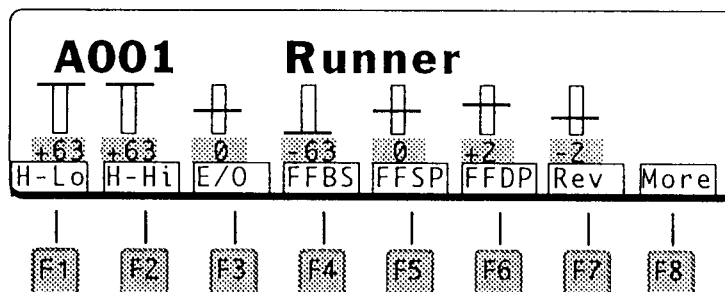

NOTES:
These parameters add and subtract from the original values contained in the patch, and affect all sources.

B and GM Banks have only one page of parameters, as shown at the top of this section.

F1 H-LO (LOW HARMONICS) (FOR BANK A ONLY)
In a patch that uses the additive sound generator, this control adjusts the level of the lower harmonics. This does not adjust the *low notes*, rather it adjusts the *low end* of any note.

F2 H-HI (HIGH HARMONICS) (FOR BANK A ONLY)
In a patch that uses the additive sound generator, this control adjusts the level of the upper harmonics. This does not adjust the *high notes*, rather it adjusts the *high end* of any note.

F3 E/O (EVEN/ODD HARMONICS) (FOR BANK A ONLY)
In a patch that uses the additive sound generator, this control adjusts the balance of even versus odd harmonics. A positive value boosts the even harmonics and cuts the odd ones, a negative value cuts the even harmonics and boosts the odd ones.

F4 FFBS (FORMANT FILTER BIAS) (FOR BANK A ONLY)
In a patch that uses the additive sound generator, this control adjusts the Formant Filter Bias.

F5 FFSP (FORMANT FILTER SPEED) (FOR BANK A ONLY)
In a patch that uses the additive sound generator, this control adjusts the Formant Filter Speed.

F6 FFDP (FORMANT FILTER DEPTH) (FOR BANK A ONLY)
In a patch that uses the additive sound generator, this control adjusts the Formant Filter Depth.

F7 REV (REVERB AMOUNT)
This adjusts the reverb level. Turn it up to add more ambience.
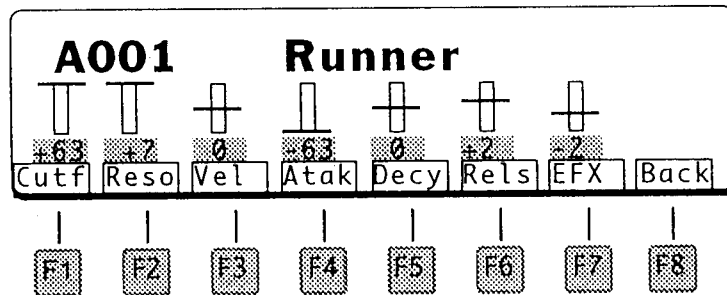

F8 MORE
Jumps to the next page, below.

F1 CTOF (FILTER CUTOFF)
This adjusts the filter cutoff frequency. Turn this up to make the sound brighter.

F2 RESO (FILTER RESONANCE)
This adjusts the filter resonance. The value range is -7 – +7.

F3 VEL (VELOCITY)
Scales the velocity plus or minus. Use this control to adjust the way the patch responds to the dynamics of your playing.

F5   DECY (DECAY TIME)
     This adjusts the initial decay for both the DCA and DCF envelopes. Turn it down (minus
     value) to make the decay *sharper*, turn it up to make the decay *smoother*.

F6   RELS (RELEASE TIME)
     This adjusts the release or final decay time for both the DCF and DCA envelopes. Turn it up to
     make the sound fade out longer *after* releasing the keyboard.

F7   EFX (EFFECTS AMOUNT)
     This adjusts the effects level, such as chorus and distortion.

F8   BACK
     Jumps to the previous page, above.

SINGLE EDIT

Pressing EDIT brings up the Edit Menu. All editing pages can be accessed from this page, or by using the Patch Select buttons to the right of the screen – see the legends *underneath* the buttons.

```
┌─────────────────────────────────────────┐

└─────────────────────────────────────────┘
```
L1   COMMON
Jumps to the Common section, see page 30.

L2   DCO
Jumps to the DCO section, see page 31.

L3   DCF
Jumps to the DCF section, see page 33.

L4   DCA
Jumps to the DCA section, see page 36.

R1   ADDITIVE
Jumps to the ADD section, see page 38.

NOTE:
This is only available when editing the additive sounds in Bank A.

R2   LFO & COPY
Jumps to the LFO section, see page 52.

R3   CONTROL
Jumps to the Control section, see page 54.

R4   EFFECT
Jumps to the Effect section, see page 79.

NOTE:
Throughout the various pages of Single Edit mode, the F2 through F7 keys can be used to turn individual sound sources on or off.

EXITING EDIT MODE

Press EXIT to return to Play Mode. Depending on which page is displayed, you may need to press EXIT more than once. If you have made any changes to the patch, an alert message appears, asking if you want to "Save". Press WRITE to save, or F8 (Quit) to exit without saving. To continue editing, press EDIT.

COMMON

The Common section contains several pages of basic parameters such as the patch name, below.
```
 A001 Runner                              Common
 > -> Name Runner
 > <-
     !"#$%&'()*+,-./0123456789:;<=>?
     @ABCDEFGHIJKLMNOPQRSTUVWXYZ[\]^_
     abcdefghijklmnopqrstuvwxyz{|}~
                                        More
```

L1 and L2 move through the name forward and back, respectively. Use the Value dial to select a letter.

F8   MORE
Advances to the next page of Common parameters, below.

```
 A001 Reznator                          Common
 > Volume         128   Sources         6 <
 > Poly           POLY  AM            OFF <
 BACK
```
L1   VOLUME
Sets the master volume for the program.

L2   POLY
Sets the polyphonic mode for the patch.

> POLY   Standard polyphonic mode
>
> SOLO1   Monophonic mode. Each key played re-triggers the envelopes.
>
> SOLO2   Monophonic mode. Sustained keys played *do not* retrigger the envelopes.

R1   SOURCES
Sets the number of sources for the patch. Additive patches (A Bank) can have up to six sources, other banks are fixed at 2 sources. Remember that the more sources used in a patch, the fewer notes that can be played.

R2   AM
Selects sources for Amplitude Modulation. One source can be set to modulate an adjacent source, i.e., 1>2.

F1   BACK
Goes back to the previous Common page, above.

DCO

Pressing DCO in the Single Edit menu brings up the following screen which contains the DCO parameters.

```
A001 Runner                              DCO
> Wave Type        ADD    KS Pitch  50cent  <
> PCM Wave No.             Fixed Key    C-1
> Coarse          +24
> Fine            +63
        S1 P  S2--  S3 A  S4 A  S5--  S6--  More
```
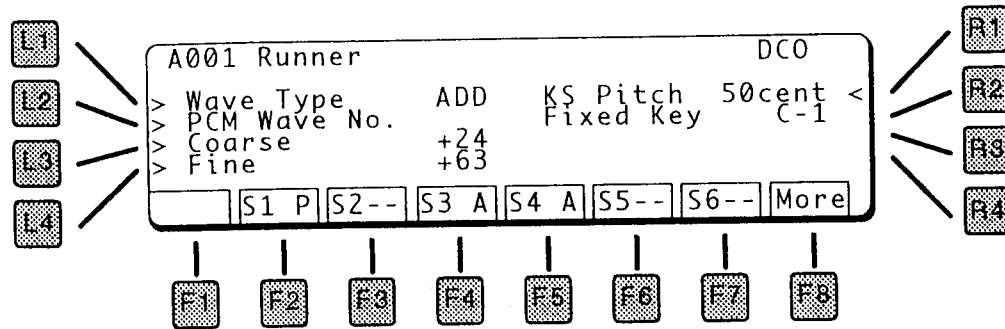

L1 WAVE TYPE
Selects the wa ve type for the sour ce: ADD f or the additive synthesizer, PCM for sample waves.

L2 PCM WAVE NUMBER
Selects the PCM wave to be used. See page 160 for a list of waves.

NOTE:
This has no effect if ADD is the selected wave type.

L3 COARSE
The coarse fr equency in semitones.The range is two octaves above or below.

L4 FINE
The fine frequency setting. Use this for detuning the wave to create beating or fullness.

R1 KS PITCH
When the Fixed Key is being used (not Off, below) this parameter adds the key value to control the pitch. This can be used to play in quarter-tones, or to add "stretch" to the tuning. The reference point is the Fixed Key value.
R2 FIXED KEY
Sets the fix ed pitch for the sour ce .The range is A-1 to C7. If Off, then normal key tracking applies.

F8 MORE
Goes to the DCO Pitch En velope page, below.

DCO PITCH ENVELOPE

The DCO Pitch envelope changes the pitch of the sound over time. Many acoustic instruments have small pitch changes during their initial attack – pulling guitar strings and embouchure in wind instruments – which can be simulated using the DCO Pitch Envelope.

Because of its function during the attack phase of the sound, the DCO Pitch Envelope has only attack and decay functions – it does not sustain.

```
       A006 Reznator              Pitch Envelope
  > Strt L  +63                              Vel to
  > Atak T  127                          Level +63  <
  > Atak L  +63                          Time  +63  <
  > Dcay T  127
  BACK  S1 P  S2--  S3 A  S4 A  S5--  S6--
```
LI   STRT L (STARTING LEVEL)
Sets the starting level for the envelope.

L2   ATAK T (ATTACK TIME)
When a note is played (note on), the envelope will go from the starting level to the Attack Level in this amount of time.

L3   ATAK L (ATTACK LEVEL)
Sets the level after the initial attack.

L4   DECY T (DECAY TIME)
After reaching the attack level, the envelope will then go to zero in this amount of time.

RI   LEVEL (VELOCITY TO LEVEL)
This controls how much the key velocity affects the *amount* of pitch envelope.

R2   TIME (VELOCITY TO TIME)
This controls how much the key velocity affects the *overall time* of pitch envelope.

DCF

Pressing DCF in the Single Edit menu brings up the following screen which contains the DCF parameters.
LI   DCF
This turns on the DCF. If Active, the signal is routed through the DCF. If set to Bypass, the sound does not pass through the DCF.

L2   CUTOFF
Sets the basic filter cutoff fr equency.

L3   MODE
Sets the *type* of filter. The choices ar e:

Lo Pass   Low Pass Filter – Cuts off the high frequencies (lets the low frequencies pass thru)

Hi Pass   High Pass Filter – Cuts off the low frequencies (lets the high frequencies pass thru)

L4   VELO CURVE
Selects a v elocity r esponse cur ve. W orks with Velo to Cut to tailor how the filter cutoff is affected b y the key velocity.

RI   RESONANCE
Sets the amount of filter resonance. The higher the setting, the more *nasal* the sound.

R2   DCF LEVEL
Adjusts the input level to the filter.

R3   KS TO CUT
Contr ols how much the Key Scale affects the filter cutoff fr equency.

R4   VELOCITY TO CUT
Contr ols how much the Velocity affects the filter cutoff fr equency.

F8   MORE
Goes to the DCF En velope page, below.

DCF (FILTER) ENVELOPE

This screen controls the envelope generator for the filter.

ENVELOPE PARAMETERS
LI DEPTH
Scales the strength of the entire envelope.

L2 ATAK T (ATTACK TIME)
When a note is played (note on), the envelope will go from zero to maximum in this amount of time. A short attack time gives a sharp edge to the start of the sound like a piano. A long attack gives a more legato effect.

L3 DCYI T (DECAYI TIME)
After reaching the maximum, the envelope will go to the decay1 level in this amount of time.

L4 DCYI L (DECAYI LEVEL)
After reaching the maximum, the envelope will go to this level.

RI DCY2 T (DECAY2 TIME)
After reaching the decay1 level, the envelope will go to the decay2 level in this amount of time.

R2 DCY2 L (DECAY2 LEVEL)
The sustain level. After Attack, Decay1, and Decay2, if a note is still held on it will sustain at this level.

R3 RELS T (RELEASE TIME)
When a note is released (goes off) the envelope will return to zero in this amount of time.

F8 MORE
Goes to the next page of parameters, which modulate the envelope.

```
┌─────────────────────────────────────────────────┐
│  A006 Reznator              DCF Modulation      │
│ > KS to Attack    ▓63  Velo to Env    +63  <    │
│ > KS to DCY1      +63  Velo to Atk    +63  <    │
│                        Velo to DCY1   +63  <    │
│ ┌────┬─────┬─────┬─────┬─────┬─────┬─────┬────┐ │
│ │Back│S1 P │S2-- │S3 A │S4 A │S5-- │S6-- │    │ │
│ └────┴─────┴─────┴─────┴─────┴─────┴─────┴────┘ │
└─────────────────────────────────────────────────┘
```
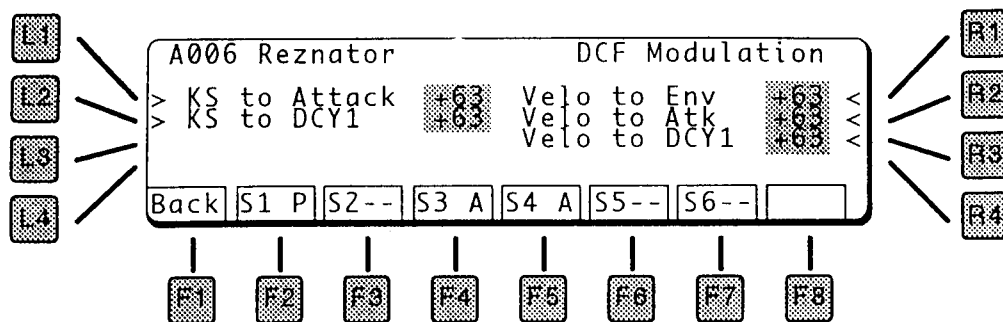

LI   KS TO ATTACK

Adds Key Scale to control the Attack time.

L2   KS TO DCYI

Adds Key Scale to control the Decay 1 time.

RI   VELO TO ENV

Adds Velocity to control the overall envelope level. The more velocity, the more the filter will open.

R2   VELO TO ATK

Adds Velocity to control the Attack time.

R3   VELO TO DCYI

Adds Velocity to control the Decay 1 time.

DCA

The Digitally Controlled Amplifier (DCA) sets the volume of the sound. It is controlled by an envelope to shape a sound's overall transient characteristics.

The DCA envelope screen shows a visual representation of the envelope.

```
     A001 ABCDEFGH              DCA Envelope
   > VelCrv  11                 Dcy2 T 127  <
   > Atak T  127                Dcy2 L +63  <
   > Dcy1 T  127                Rels T 127  <
   > Dcy1 L +63                             <
   [BACK][S1 P][S2--][S3 A][S4 A][S5--][S6--][MORE]
```
LI   VELOCITY CURVE
Selects a velocity response curve to tailor the response of the DCA to key velocity.

L2   ATTACK TIME
When a note is played (note on), the envelope will go from zero to maximum in this amount of time. A short attack time gives a sharp edge to the start of the sound like a piano. A long attack gives a more legato effect.

L3   DECAY I TIME
After reaching the maximum, the envelope will go to the decay1 level in this amount of time.

L4   DECAY I LEVEL
After reaching the maximum, the envelope will go to this level.

RI   DECAY2 TIME
After reaching the decay1 level, the envelope will go to the decay2 level in this amount of time.

R2   DECAY2 LEVEL
The sustain level. After Attack, Decay1, and Decay2, if a note is still held on it will sustain at this level.

R3   RELEASE TIME
When a note is released (goes off) the envelope will return to zero in this amount of time.

F8   MORE
Goes to the DCA Modulation page, below.

DCA MODULATION

This page offers parameters to modify the DCA envelope by key scale (which note is played) or velocity (how hard a key is played). Careful use of these parameters can add life and expression to any sound.

```
┌──────────────────────────────────────────────────┐
│ A001 Runner              DCA Modulation          │
│      KS TO DCA ENV       VELO TO DCA ENV          │
│ > Level          +63     Level          +63   <   │
│ > Attack Time    +63     Attack Time    +63   <   │
│ > Decay1 Time    +63     Decay1 Time    +63   <   │
│ > Release        +63     Release        +63   <   │

│ │Back││S1 P││S2--││S3 A││S4 A││S5--││S6--││   │  │
└──────────────────────────────────────────────────┘
```
MODULATION BY KEY SCALE:

L1 ENVELOPE LEVEL
Uses key scale to control the maximum amount of the envelope. With a positive value, a higher key will have more envelope dynamics and a lower key will have less dynamics.

L2 ATTACK TIME
Uses key scale to control the attack time. With a positive value, a higher key will have a longer attack time and a lower key will have a shorter attack time.

In nature, lower instruments (baritone sax, for example) have a *longer* attack time than higher instruments (alto sax). Using *negative* amounts of this parameter will simulate this.

L3 DECAY1 TIME
Uses key scale to control the decay1 time. With a positive value, a higher key will have a longer decay time and a lower key will have a shorter time.

L4 RELEASE TIME
Uses key scale to control the decay1 time. With a positive value, a higher key will have a longer release time and a lower key will have a shorter time.

MODULATION BY VELOCITY:

R1 ENVELOPE LEVEL
Uses velocity to control the maximum amount of the envelope. With a positive value, a harder (louder) key will have more envelope dynamics and a softer key will have less dynamics.

R2 ATTACK TIME
Uses velocity to control the attack time. With a positive value, a harder (louder) key will have a longer attack time and a softer key will have a shorter attack time.

In nature, softer notes generally have a *longer* attack time than louder notes. Using *negative* amounts of this parameter will simulate this.

R3 DECAY1 TIME
Uses velocity to control the decay1 time. With a positive value, a harder (louder) key will have a longer decay time and a softer key will have a shorter time.

R4 RELEASE TIME
Uses attack velocity to control the release time. With a positive value, a faster key release will have a longer release time and a slower release will have a shorter time. Again, negative values of this parameter are more *natural.*

ADDITIVE

This section presents the editing parameters for Kawai's ADD harmonic synthesizer. These parameters are only available when editing additive sources in A Bank patches. If you try to edit a PCM wave in an A Bank patch, the following message appears:

```
┌─A001 Runner─────────────────────────────┐
│      /!\    This Is a PCM Wave           │
│     /   \   Change the Wave type to      │
│    /_____\      Additive?                │
│ ┌──┐┌────┐┌────┐┌────┐┌──┐┌──┐┌──┐┌────┐ │
│ │NO││S1 A││S2 P││S3 A││  ││  ││  ││YES │ │
└─┴──┴┴────┴┴────┴┴────┴┴──┴┴──┴┴──┴┴────┴─┘
```
If you continue, the PCM source will be converted to an additive one.

The first ADD screen presents seven submenus for navigation.

```
A002 Launcher                        Menu
     Normal Mode           Morf Mode
  > Harmonic Lvl(DHL)                  Morf <
  > Harmonic Env(DHE)
  > Formant  Lvl(DFL)     Formant Lvl(DFL) <
  > Formant  Env(DFE)     Formant Env(DFE) <
```
L1   HARMONIC LEVEL
      Goes to DHL page, where the level of individual harmonics can be adjusted.

L2   HARMONIC ENVELOPE
      Goes to DHE page, where the harmonics can be enveloped.

L3   FORMANT LEVEL
      Goes to the DFL page, where the formant filter can be adjusted.

L4   FORMANT ENVELOPE
      Goes to the DFE page, where the formant filter can be enveloped.

R1   MORF
      Goes to the Morfing page, which is a harmonics programming assistant.

      NORMAL VS MORF
      There are two programming modes, Normal and Morf. Any additive source uses one or the other. The main difference is in how the Harmonic Envelopes are utilized. For this reason, if you change to Morf mode (by executing a morf), the DHE parameters are replaced by new Morf settings. Other sections are not affected.

R3   FORMANT LEVEL
      Goes to the DFL page, where the formant filter can be adjusted.

R4   FORMANT ENVELOPE
      Goes to the DFE page, where the formant filter can be enveloped.

HARMONIC LEVEL (DHL)

Selecting Harmonic Level from the previous page brings you to the DHL Menu page, where you can select pages for direct manipulation of the harmonic levels.

```
A023 Launcher                    DHL Menu
> Common
> Harmonic Level Edit
> Harmonic Level Copy
       S1 A  S2 P  S3 A  S4 A  S5--  S6--
```
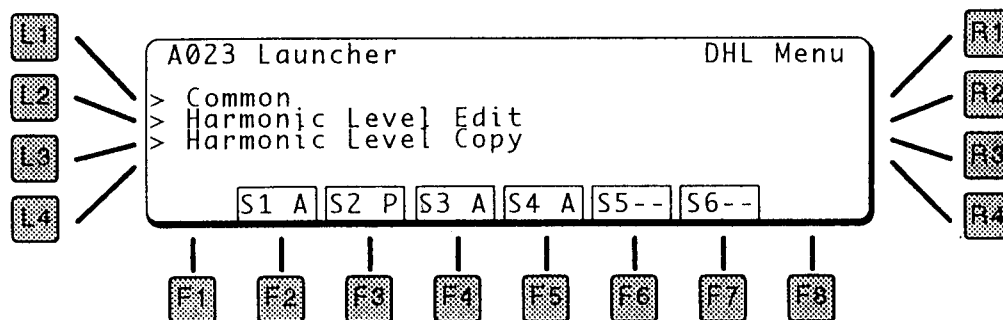

L1 COMMON
Edits parameters common to all harmonics.

L2 HARMONIC LEVEL EDIT
Goes to a visual display of harmonics, where individual harmonics can be adjusted.

L3 HARMONIC LEVEL COPY
Copies sets of harmonics from one patch to another.

COMMON

Edits parameters common to all harmonics.

```
A023 Launcher                    DHL Common
                              Balance
> Total Gain      63   Vel Curve    5 <
> KS to Gain       0   Vel Depth   63 <
> Harmonic Group  HI
       S1 A  S2 P  S3 A  S4 A  S5--  S6--
```
L1 TOTAL GAIN
This is the master level for this harmonic group.

L2 KS TO GAIN
This adjusts how much the Key Scale controls the gain of the harmonic group. With a positive value, high notes will have a higher gain than low notes.

L3 HARMONIC GROUP
In the K5000W, each source can use a harmonic bank of 64 harmonics. This parameter selects whether the first 64 harmonics (1 – 64, starting at the fundamental) or harmonics 65 – 128 are used.

By itself, the Hi harmonics group has a tonality similar to metallic percussion instruments.

R1 VELOCITY CURVE
12 velocity curves are available to adjust the response of the harmonic envelope to the touch of your playing. This curve is used for all sections of the patch. Curve #5 (below) equals an exact 1:1 correlation, the other curves weight the response in different directions.

1 2 3 4 5 6 7 8 9 10 11 12
R2   VELOCITY DEPTH
This sets the velocity crossfade between the soft and loud harmonic groups.

HARMONIC LEVEL EDIT

Goes to a visual display of harmonics, where individual harmonics can be adjusted.

```
A023 Launcher              Harmonic Level
                  SOFT           Edit Group
                                    Bright  <
                              Harm        1 <
  > >                        Level    127  <
  > <                        Selct  Soft   <
       S1 A  S2 P  S3 A  S4 A  S5--  S6--
```
L3   NEXT HARMONIC
L4   PREVIOUS HARMONIC
These buttons select an individual harmonic. The small arrow under the harmonics displays which harmonic is selected, and its number and value can be seen on the right side of the screen (R2 and R3).

R1   EDIT GROUP
Since editing harmonics one at a time can become quite cumbersome, the Edit Group function allows you to select harmonics to modify *as a group*.

HARMONIC GROUPS

Harmonics can be grouped in the following categories. The dots underneath the harmonic bars show which harmonics are selected.

BRIGHT
The upper 32 harmonics.

DARK
The lower 32 harmonics.

ODD
The odd numbered harmonics.

EVEN
The even numbered harmonics.

OCT
Each harmonic tuned to an octave of the fundamental pitch: 1, 2, 4, 8, 16, 32, 64 (when lo is selected) / 128 (when hi is selected).

5TH
Each harmonic tuned to a fifth above of the fundamental pitch: 3, 6, 12, 24, 48 (when lo is selected) / 96 (when hi is selected).

ALL
All 64 harmonics.

EACH
Only the selected harmonic, the pointed to by the arrow under the harmonic display.

R2   HARMONIC NUMBER
Uses the Value dial to select a harmonic for display. The small arrow under the harmonics displays which harmonic is selected.

R3   LEVEL
Adjusts the level of the selected harmonic(s).

R4   SELECT
Selects a harmonic group to edit (soft or loud). These two sets can be crossfaded by velocity.

HARMONIC LEVEL COPY

From this screen, you can copy sets of harmonics from one patch to another. Since there are so many parameters in a harmonic series, this makes creating and modifying patches less time consuming.
L2   SINGLE
Select the Patch to copy from. Pressing L2 switches between Soft and Loud.

L3   SOURCE
Select the Source from within the selected patch to copy from, 1 – 6. Pressing L3 switches between Soft and Loud variations.

*** = no copy. This means that this side (soft or loud) will not be copied.

F2~F7   DESTINATION
Press the F2~F7 buttons to select which source (of the current patch) that the copy will be made *to*.

F8   EXECUTE
Press this to make the copy.

HARMONIC ENVELOPE (DHE)

This screen is the menu for Harmonic Envelope functions.

```
┌─────────────────────────────────────────────────────┐
│ A023 Launcher                        DHE  Menu       │
│ > Harmonic Envelope Multiview                        │
│ > Harmonic Envelope View                             │
│ > Harmonic Envelope Copy                             │

└─────────────────────────────────────────────────────┘
```
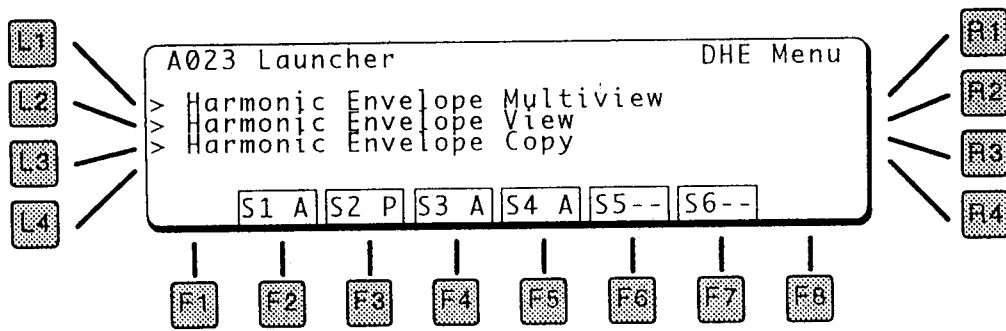

L1   HARMONICS ENVELOPE MULTIVIEW
      Displays individual parameters for *all 64* harmonic envelopes simultaneously.

L2   HARMONICS ENVELOPE VIEW
      Displays all parameters of a *single* harmonic envelope.

L3   HARMONICS ENVELOPE COPY
      Copies harmonic envelopes from a Single patch in memory to the current patch being edited.

HARMONIC ENVELOPE MULTIVIEW

The Harmonic Envelope Multiview screen shows individual segments of the harmonic envelope for all harmonics side by side. The display shows the rate on the left and the level on the right. The harmonics selected for editing are shown by the dots and the arrow underneath the graphs. Compare this screen to the Harmonic Envelope View screen (described on page 44), which shows all segments of a single envelope.

```

L1   EDIT GROUP
      Since editing harmonics one at a time can become quite cumbersome, the Edit Group function allows you to select harmonics to modify *as a group*.

HARMONIC GROUPS
      Harmonics can be grouped in the following categories. The dots underneath the harmonic bars show which harmonics are selected.

      BRIGHT
      The upper 32 harmonics.

DARK
The lower 32 harmonics.

ODD
The odd numbered harmonics.

EVEN
The even numbered harmonics.

OCT
Each harmonic tuned to an octave of the fundamental pitch: 1, 2, 4, 8, 16, 32, 64 (when lo is selected) / 128 (when hi is selected).

5TH
Each harmonic tuned to a fifth above of the fundamental pitch: 3, 6, 12, 24, 48 (when lo is selected) / 96 (when hi is selected).

ALL
All 64 harmonics.

EACH
Only the selected harmonic, the pointed to by the arrow under the harmonic display.

L2 **LOOP**
To enhance motion in the sound, the harmonic envelopes can loop among several settings during the sound's sustain.

OFF
No loop. Envelope goes to the Decay 2 Level and sustains there, the same as the envelopes for the DCF and DCA.

LP1
Loops between Decay 1 Level and Decay 2 Level, at the Decay 2 Rate.

LP2
Loops between Decay 1 Level and Decay 2 Level, but uses *both* Decay 1 and Decay 2 Rates.
L3   NEXT HARMONIC
L4   PREVIOUS HARMONIC
These buttons select an individual harmonicThe small arrow under the harmonics displays which harmonic is selected.

R1   ATTACK (RATE & LEVEL)
Press R1 to switch between the Attack Rate and Attack Level. Use the Value dial to change the setting.

R2   DECAY 1 (RATE & LEVEL)
Press R2 to switch between the Decay 1 Rate and Level. Use the Value dial to change the setting.

R3   DECAY 2 (RATE & LEVEL)
Press R3 to switch between the Decay 2 Rate and Level. Use the Value dial to change the setting.

R4   RELEASE (RATE & LEVEL)
Press R4 to switch between the Release Rate and Level. Use the Value dial to change the setting.

HARMONIC ENVELOPE VIEW

This display shows all the envelope parameters for a single harmonic on one screen, another way of looking at the harmonic envelopes.
L2   LEVEL
Press L2 to cycle through the level settings for Attack, Decay 1, Decay 2, and Release. Use the Value dial to change the setting.

L3   RATE
Press L3 to cycle through the rate settings for Attack, Decay 1, Decay 2, and Release. Use the Value dial to change the setting.

R3   HARMONIC
This selects the harmonic to modify. Each of the 64 harmonics has its own envelope.

R4   DECAY LOOP
To enhance motion in the sound,the harmonic envelopes can loop among several settings during the sound's sustain.See the diagram on the previous page.

OFF
No loop. Envelope goes to the Decay 2 Level and sustains there, the same as the envelopes for the DCF and DCA.

LP1
Loops between Decay 1 Level and Decay 2 Level, at the Decay 2 Rate.

LP2
Loops between Decay 1 Level and Decay 2 Level, but uses *both* Decay 1 and Decay 2 Rates.

HARMONIC ENVELOPE COPY

From this screen, you can copy sets of harmonic envelopes from one patch into the current patch. Since there are so many parameters in a harmonic envelope, this makes creating and modifying patches less time consuming.

```
┌─────────────────────────────────────────────────┐

│      │S1 A│S2 P│S3 A│S4 A│S5--│S6--│             │
└─────────────────────────────────────────────────┘
```
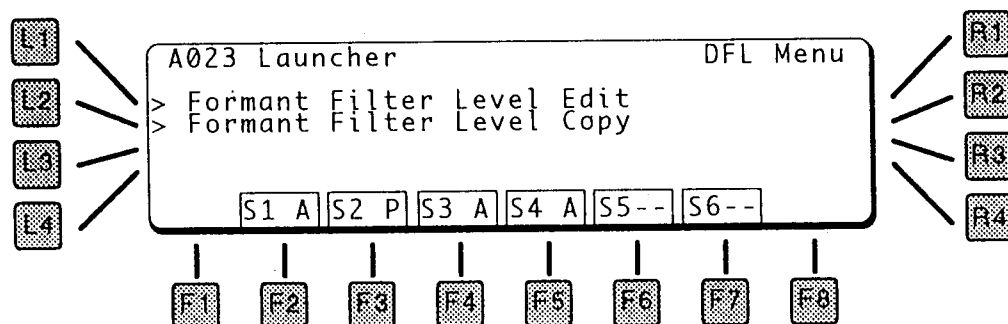

The following chart shows the pitch and frequency of each filter band. The Bias control can be used to slide the entire range up and down.

CENTER FREQUENCY OF 128 BAND FORMANT FILTER (BIAS=0)

Band 70=440Hz.
If the BIAS is set to +12, Band 70=220Hz.
If the BIAS is set to -12, Band 70=880Hz.
The Formant Filter Envelope value works the same as the BIAS.
If the Formant Filter Env. is set to a minus value, the filter moves to the right.

Band	Freq.-Hz.	Key	Band	Freq.-Hz.	Key	Band	Freq.-Hz.	Key	Band	Freq.-Hz.	Key

L3 NEXT
L4 PREVIOUS
These buttons select the next or previous group.

R1 EDIT GROUP
The filter bands can be grouped into the following categories. The bracket underneath the bars show which filter bands are selected. The range can be adjusted with the Band control, the level of the selected band with the level control.

GRAPHIC EQ
An eight-band graphic EQ, which creates the typical elliptical EQ pattern in each band.

20 BAND
Operates on 20 of the 128 formant filter bands at one time.

15 BAND
Operates on 15 of the 128 formant filter bands at one time.

10 BAND
Operates on 10 of the 128 formant filter bands at one time.

5 BAND
Operates on 5 of the 128 formant filter bands at one time.

ALL
All 128 Bands.

EACH
Only the selected frequency band, shown by the arrow under the display.

R2 BAND
The range of the filter band to be controlled can be adjusted using the Band control. The bracket shows the selected range.

R3 LEVEL
This adjusts the level of the selected band.

R4 BIAS
The frequencies of the entire formant filter can be moved up and down using the Bias control.

L2 FORMANT FILTER LEVEL COPY

This copies the formant filter settings from a Single patch in memory into the *current* Single patch.

```

Formant Envelope Sweeps the Filter Up and Down

Formant Filter
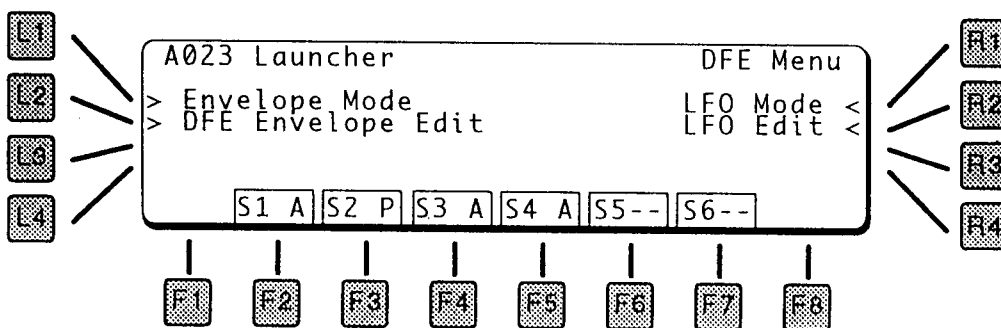

Formant
Envelope

L2 DFE ENVELOPE EDIT

This page contains the parameters for the Formant Filter Envelope. There is one envelope per source.

The envelope diagram shows the visual result of the envelope settings on the page.
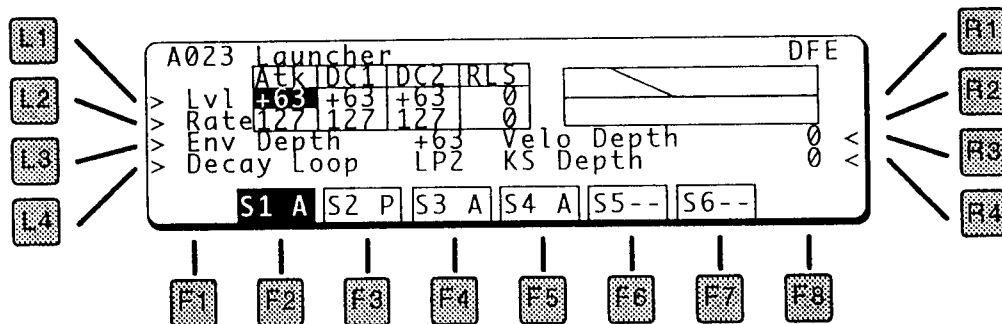

L1 LEVEL
Press L2 to cycle through the level settings for Attack, Decay 1, Decay 2, and Release. Use the Value dial to change the setting.

L2 RATE
Press L3 to cycle through the time settings for Attack, Decay 1, Decay 2, and Release. Use the Value dial to change the setting.

L3 ENV DEPTH
This is the master envelope depth control, which determines how much the envelope controls the filter.

L4 DECAY LOOP
To enhance motion in the sound, the harmonic envelopes can loop among several settings during the sound's sustain. See the diagram on page 43.

OFF
No loop. Envelope goes to the Decay 2 Level and sustains there, the same as the envelopes for the DCF and DCA.

LP1
Loops between Decay 1 Level and Decay 2 Level, at the Decay 2 Rate.

LP2
Loops between Decay 1 Level and Decay 2 Level, but uses *both* Decay 1 and Decay 2 Rates.

R3   VELO DEPTH
The key velocity can be used to adjust the amount of filter modulation by the envelope. With a positive value, the harder a key is played, the more the filter will be moved by the envelope.

R4   KS DEPTH
The key scale (which key is played) can also be used to adjust the amount of filter modulation by the envelope. With a positive value, the higher the note, the more the filter will be moved by the envelope.

R2 LFO EDIT

```
   A023 Launcher                      DFE LFO
  ┌──────────────────────┐
  │ /|                    │    LFO Shape  TRI  <
  │/ |        /\          │    LFO Speed   72  <
  │  |       /  \         │    LFO Depth   63  <
  └──────────────────────┘
     S1 A  S2 P  S3 A  S4 A  S5 --  S6 --
```
R2   LFO SHAPE
This selects the LFO waveform type:

TRI
Triangle

SAW
Sawtooth

RND
Random

R3   LFO SPEED
Sets the LFO speed.

R4   LFO DEPTH
Sets the initial LFO Depth.

MORF

Morfing lets you create new harmonic shapes by dissolving between four different harmonic *snapshots*. This is done by copying four sources from patches stored in the K5000W.

Sustain
L2   SINGLE
This selects which *patch* the source will be copied from. Press this key repeatedly to cycle through the four phases (P1 – P4).

L3   SOURCE
This selects the *source* within the single patch (selected by L2) to copied. There are up to six sources, each of which contains a soft harmonic set (S), and a loud harmonic set (L). Press this key repeatedly to cycle through the four phases (P1 – P4).

L4   TIME
The transition between phases.

R1   TOTAL GAIN
The loudest harmonic will be set to this level, so it functions as a master level.

R2   HARMONIC GROUP
This selects the range of harmonics, 1–64 or 65–128.

R3   KS TO GAIN
Controls the level with the Key Scale. With a positive value, the harmonics will get louder as higher notes are played on the keyboard.

R4   P3>P2 LOOP
If OFF, the harmonics will move according to the selected on this screen, however they will *freeze* once the sustain point is reached. By turning ON the P3>P2 Loop, the harmonics will morf back and forth between phase 2 and phase 3 during sustain, creating constant motion and a more animated sound.

F8   EXECUTE
Creates the Morf.

LFO & COPY

The Low Frequency Oscillator is a slow moving (sub-audio) oscillator that is used to modify the DCO, DCF, or DCA to give vibrato and tremolo effects.

A Source Copy function is also included on this page.

```
A001 Runner                              LFO
> Waveform        TRI    Fade In time   127 <
> Speed           127    Fade In to SP   63 <
> Delay Onset     127
                         Source Copy         <
         S1 P  S2--  S3 A  S4 A  S5--  S6--  More
```
L1   WAVEFORM
      This selects the LFO waveform type:

      SIN
      Sine

      TRI
      Triangle

      SAW
      Sawtooth

      SQR
      Square

      RND
      Random

L2   SPEED
      Sets the LFO initial speed. The range is 0.1Hz to 18Hz.

L3   DELAY ONSET
      This adds a delay before the LFO kicks in. The delay can be as long as 2 seconds.

R1   FADE IN TIME
      After the delay, this sets the amount of time that the LFO fades in to maximum amount.

R2   FADE IN TO SPEED
      After the delay, the LFO gradually speeds up to the initial speed setting.

R3   SOURCE COPY
      This lets you copy an *entire* source from another patch.

```
 A001 Runner                        Source Copy
> Single No.      A036
> Source No.         1    --> SRC1

      S1 A  S2 P  S3 A  S4 A  S5--  S6--  Exec
```
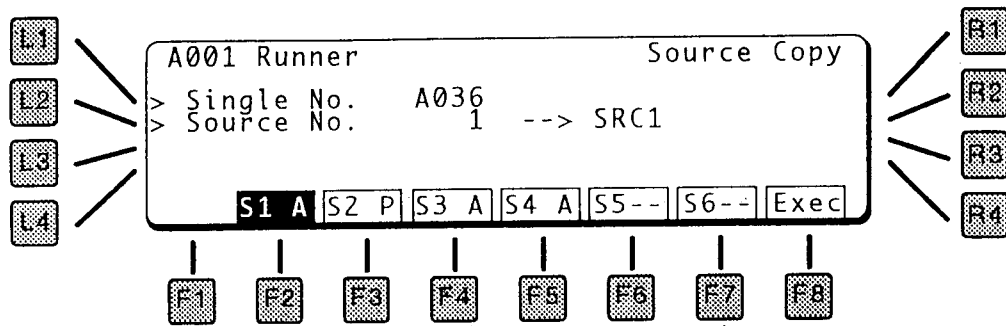

L1   SINGLE NUMBER
Select the Patch to copy from.

L2   SOURCE NUMBER
Select the Source from within the selected patch to copy from, 1 – 6.

F2 – F6 Selects the destination source (in the current patch) for the copy.

F8   MORE
      Goes to the LFO Modulation page, below.

LFO MODULATION

```
 A001  Runner                   LFO  Modulation
> Vibrato (DCO)      63    KS to Vibrato   +63  <
> Growl (DCF)        63    KS to Growl     +63  <
> Tremolo (DCA)      63    KS to Tremolo   +63  <

 Back  S1 P  S2--  S3 A  S4 A  S5--  S6--
```
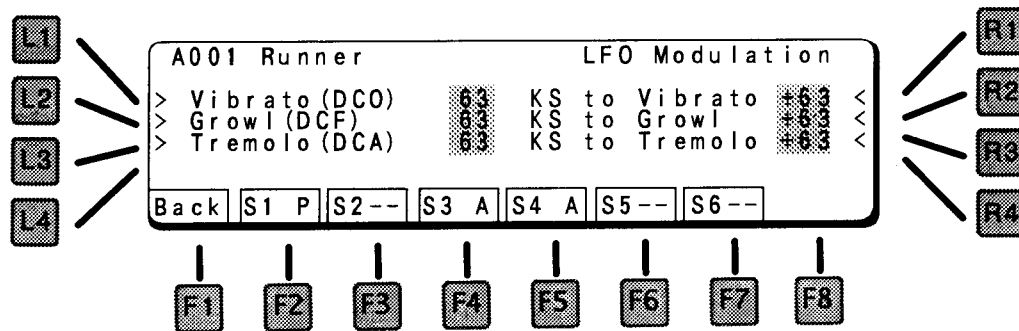

L1   VIBRATO (DCO)
      Controls the amount of LFO routed to the DCO, which causes vibrato.

L2   GROWL (DCF)
      Controls the amount of LFO routed to the DCF, which causes growl.

L3   TREMOLO (DCA)
      Controls the amount of LFO routed to the DCA, which causes tremolo.

R1   KEY SCALE TO VIBRATO
      This scales the amount of vibrato depth according to the key played. With a positive value,
      the amount of vibrato increases as higher notes are played.

R2   KEY SCALE TO GROWL
      This scales the amount of DCF growl according to the key played. With a positive value,
      the amount of growl increases as higher notes are played.

R3   KEY SCALE TO TREMOLO
      This scales the amount of tremolo depth according to the key played. With a positive value,
      the amount of tremolo increases as higher notes are played.

CONTROL

The Control pages contain settings for real time control of the sound.

VOLUME, PITCH BEND, PAN
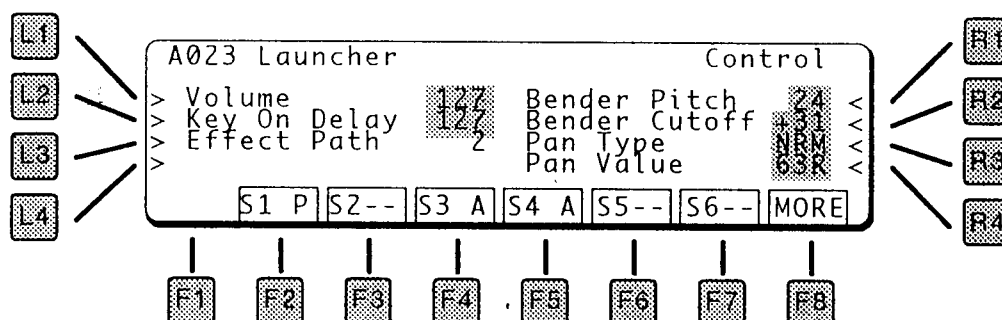

L1   VOLUME
This is the master volume for the sound source.

L2   KEY ON DELAY
This sets a delay between the time the key is struck and the sound starts.

L3   EFFECT PATH
Routes this source to one of the four inputs to the effects section. For more on effects please see page 79.

Effect Path routes the source to one of these Effect Inputs
R1   BENDER PITCH
The maximum amount of pitch bend, in semitones.

R2   BENDER CUTOFF
The Pitch Bend control also can affect the filter. If you bend *up*, the filter cutoff goes up and the sound gets brighter. If you bend *down* the filter cutoff goes down and the sound gets darker.

R3   PAN TYPE
This sets the type of panning.

NRM   (Normal) is a standard left to right pan, controlled by the Pan Value, below.

RND   (Random) changes the panning randomly for each note played. This gives a feeling of an "ensemble of players" when used for a string patch, for example.

KS & -KS   (Key Scale and Negative Key Scale) changes the panning depending upon the key played. KS pans from left to right, -KS pan from right to left. Using KS will simulate the natural panning of strings inside a piano.

R4   PAN VALUE
Places the sound left to right in the stereo field.

F8   MORE
       Press to go to the Zone screen, below.

KEY AND VELOCITY ZONE

```
┌──────────────────────────────────────────────────────┐
│  A023 Launcher                        Control         │
│  > Zone Lo  C#-2     ┌──────────────────────────┐     │
│  > Zone Hi  D#-8     │                          │     │
│  > Velo Sw   OFF     │                          │     │
│  > Value      68     └──────────────────────────┘     │
│ [Back][S1 P][S2--][S3 A][S4 A][S5--][S6--][More]      │
└──────────────────────────────────────────────────────┘
```
This screen has parameters for key and velocity range. Using these parameters, a sound can be limited to play in only a certain range of the keyboard, or only when a key is played hard or soft. By creating several sources, for example, one that plays on soft notes only and another that plays on hard notes only, a sound can be created with more lifelike variation.

L1   ZONE LO
      Sets the lowest note that will be played. The keyboard graphic visually shows the range.

L2   ZONE HI
      Sets the highest note that will be played.

L3   VELOCITY SWITCH
      Sets the velocity range. At Loud, only hard (loud) notes will sound. At Soft, only soft notes will sound. When set to OFF, the velocity switch is turned off and notes play at all velocity levels.

L4   VALUE
      Sets the threshold between high and low velocity. This is the MIDI velocity number.

F1   BACK
      Press to return to the previous screen.

F8   MORE
      Press to go to the controller screen, below.

CONTROLLERS

The next two screens contain settings for aftertouch pressure, modulation wheel, and expression pedal control of the sound. Following these is a screen for Assignable Controllers.

```
┌──────────────────────────────────────────────────────┐
│  A023 Launcher                      Controller        │

└──────────────────────────────────────────────────────┘
```
PRESSURE MODULATION

Channel Pressure, or *aftertouch,* can be routed to two destinations simultaneously (actually a *third* destination is possible by using the Assignable Controllers, page 59).

L1 DESTINATION 1
Selects the destination for the modulation. The destination can be any of those listed below.

L2 DEPTH 1
Sets the amount of the modulation. This can be positive or negative.

L3 DESTINATION 2
Selects the destination for the modulation. The destination can be any of those listed below.

L4 DEPTH 2
Sets the amount of the modulation. This can be positive or negative.

WHEEL MODULATION

The Modulation Wheel can be routed to two destinations simultaneously (actually a *third* destination is possible by using the Assignable Controllers, page 59). The Modulation Wheel is MIDI Controller 1.

R1 DESTINATION 1
Selects the destination for the modulation. The destination can be any of those listed below.

R2 DEPTH 1
Sets the amount of the modulation. This can be positive or negative.

R3 DESTINATION 2
Selects the destination for the modulation. The destination can be any of those listed below.

R4 DEPTH 2
Sets the amount of the modulation. This can be positive or negative.

F1 BACK
Press to return to the previous screen.

F8 MORE
Press to go to the expression pedal modulation screen, below.

EXPRESSION PEDAL

This screen contains settings for control of the sound using the expression pedal (MIDI controller 11).

L1 DESTINATION 1
Selects the destination for the modulation. The destination can be any of those listed below.

L2   DEPTH 1
Sets the amount of the modulation. This can be positive or negative.

L3   DESTINATION 2
Selects the destination for the modulation. The destination can be any of those listed below.

L4   DEPTH 2
Sets the amount of the modulation. This can be positive or negative.

F1   BACK
Press to return to the previous screen.

F8   MORE
Press to go to the Assignable Controller screen, below.

MODULATION DESTINATIONS
Any of the modulation sources on these pages can be routed to any of the following destinations:

PITCH
Modifies the pitch. With a positive value, increasing the control makes the pitch go up, with a negative value, increasing the control makes the pitch go down.

CUTOFF
Modifies the filter cutoff. With a positive value, increasing the control makes the sound brighter, with a negative value, increasing the control makes the sound darker.

LEVEL
Modifies the volume. With a positive value, increasing the control makes the sound louder, with a negative value, increasing the control makes the sound softer.

VIBRATO DEPTH
Adds Vibrato (LFO controls pitch). This parameter sets the amount of vibrato.

GROWL DEPTH
Adds Growl (LFO controls filter). This parameter sets the amount of growl.

TREMOLO DEPTH
Adds Tremolo (LFO controls volume). This parameter sets the amount of tremolo.

LFO SPEED
Modifies the LFO speed. With a positive value, increasing the control makes the LFO faster, with a negative value, increasing the control makes the LFO slower.

ATTACK TIME
Controls the DCF & DCA Attack time. With a positive value, a higher key will have a longer attack time and a lower key will have a shorter attack time.

DECAY1 TIME
Controls the DCF & DCA Decay1 time. With a positive value, a higher key will have a longer decay time and a lower key will have a shorter time.

RELEASE TIME
Controls the DCF & DCA Release time. With a positive value, a higher key will have a longer release time and a lower key will have a shorter time.

VELOCITY OFFSET
Scales the velocity, plus and minus.

RESONANCE
Controls the amount of filter resonance.

PANPOT
Controls the Left/Right panning of the sound

FORMANT FILTER BIAS
In a patch that uses the additive sound generator, this control adjusts the Formant Filter Bias.

FORMANT FILTER ENV/LFO DEPTH
In a patch that uses the additive sound generator, this control adjusts the Formant Filter Depth.

FORMANT FILTER ENV/LFO SPEED
In a patch that uses the additive sound generator, this control adjusts the Formant Filter Speed.

HARMONICS LO
Controls the level of the lower harmonics. This does not adjust the *low notes,* rather it adjusts the *low end* of any note.

HARMONICS HI
Controls the level of the upper harmonics. This does not adjust the *high notes,* rather it adjusts the *high end* of any note.

HARMONICS EVEN
Controls the level of the even harmonics.

HARMONICS ODD
Controls the level of the odd harmonics, including the *fundamental,* or base pitch.

ASSIGNABLE CONTROLLER

Two additional controllers can be used for modulation. The controllers are assigned from the following screen.
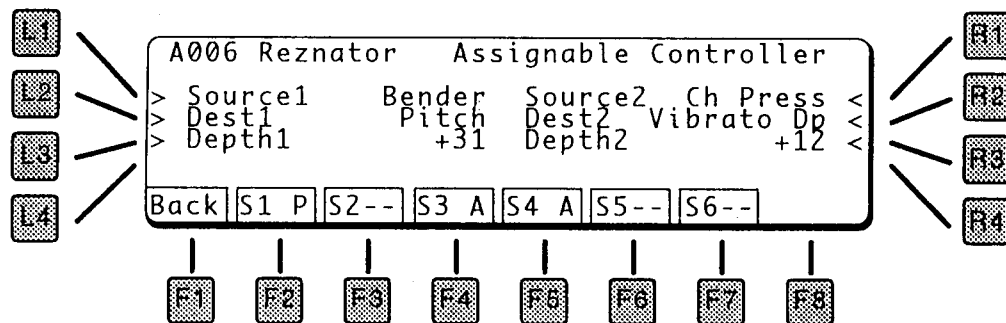

L1   SOURCE1
Selects the source for the modulation. The source can be any of those listed above.

L2   DESTINATION1
Selects the destination for the modulation. The destination can be any of those listed on page 57.

L3   DEPTH1
Sets the amount of the modulation. This can be positive or negative.

R1   SOURCE2
Selects the source for the modulation. The source can be any of those listed above.

R2   DESTINATION2
Selects the destination for the modulation. The destination can be any of those listed on page 57.

R3   DEPTH2
Sets the amount of the modulation. This can be positive or negative.

ASSIGNABLE CONTROLLER SOURCES
The following sources can be used for modulation:

BENDER
The Pitch Bend wheel.

CH PRESS (CHANNEL PRESSURE)
Aftertouch pressure (per channel).

WHEEL
The Modulation Wheel

EXPRESS (EXPRESSION PEDAL)
The Expression Pedal, MIDI Controller 11

MIDI VOLUME
The MIDI Volume command, MIDI Controller 7

PANPOT
The MIDI Pan command, MIDI Controller 10

G CONT 1 ~ 8 (GENERAL CONTROLLERS 1~ 8)
The eight MIDI General Purpose Controllers – controller numbers 16–19 & 80–83.

WRITE

After editing, save your sound by pressing the WRITE button in the COMMON section of the front panel. The following screen appears.

```
L1                  A001  Runner                           R1
L2              > Write                      Delete  <      R2
L3              > Disk Write                                R3
L4                                                          R4
```

L1 WRITE

This saves your patch to the internal memory area.

```
L1      A001  Runner                                  R1
L2          !"#$%&'()*+,-./0123456789:;<=>?      <    R2
L3      @ABCDEFGHIJKLMNOPQRSTUVWXYZ[ ]^_              R3
L4      `abcdefghijklmnopqrstuvwxyz{|}-              R4
        Patch Name   Runner              Exec
             <    >
```

```
F1  F2  F3  F4  F5  F6  F7  F8
```
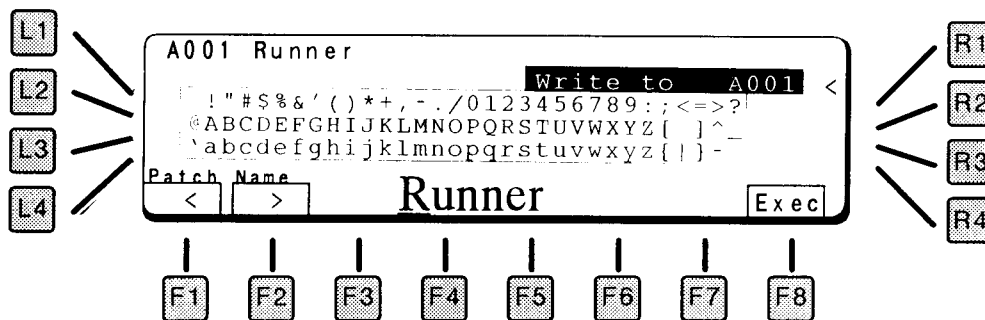

R1 WRITE LOCATION
Use the Value dial to select a location to save your patch.

F1/F2 CHARACTER
This names the patch. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8 EXECUTE
Stores the patch.

L2 DISK WRITE (A BANK ONLY)

You can also write ADD Patches to disk.   This is useful if your internal memory is full.
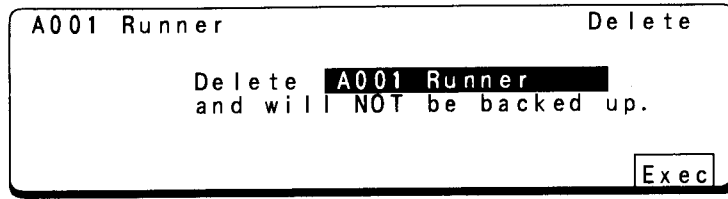

```
A001  Runner                 Disk Write
Edit bf>Disk
     !"#$%&'()*+,-./0123456789:;<=>?
    @ABCDEFGHIJKLMNOPQRSTUVWXYZ[ ]^_
     `abcdefghijklmnopqrstuvwxyz{|}__
File Name
     <    >    Runner      .KA1     Exec
```

F1/F2 CHARACTER
This names the file on the disk. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8   EXECUTE
      Press Execute to save the file. It will be saved with the file extension shown after the name.

R1 DELETE (A BANK ONLY)

Since there is not a fixed number of ADD patches in the A Bank, you may need to delete patches to make room for new ones.

```
A001  Runner                          Delete

         Delete  A001  Runner
         and will NOT be backed up.

                                          Exec
```

Use the Value dial to choose the patch to delete, and press F8 (Execute). Sure? Press F8 to continue.

KIT SECTION

Single Patches B117 through B128 are reserved for drum kits. B117 is user editable, the others are preset.

```
Single Bank Menu

  B120  Standrd1      B125  Bob
  B121  Standrd2      B126  Dance
  B122  Room          B127  Jazz
  B123  Power         B128  Brush
  B124  Electric
```

MODIFYING PATCHES

In Kit Play mode, eight parameters are available for instant edit. Press one of the F keys as described below, then use the value dial to change the setting.

NOTES:
These parameters add and subtract from the original values contained in the instrument patches.
```
┌─────────────────────────────────────────────┐
│   B120        Standrd1                       │
│  ┬┬  ┬┬  ┬┼┬  ┴┴  ┬┼┬  ┬┼┬  ┬┼┬  ┬┼┬          │
│  ▓▓▓  +7  0  -63  0  +2  -2   0              │
│ │Cutf││Reso││Vel ││Atak││Decy││Rels││EFX ││Rev │ │
└─────────────────────────────────────────────┘
```

F1   CTOF (FILTER CUTOFF)
This adjusts the filter cutoff frequency. Turn this up to make the sound brighter.

F2   RESO (FILTER RESONANCE)
This adjusts the filter resonance. The value range is -7 – +7.

F3   VEL (VELOCITY SENSITIVITY)
Adjusts the velocity sensitivity. Use this control to adjust the way the patch responds to the dynamics of your playing.

F4   ATAK (ATTACK TIME)
This adjusts the envelope (DCA) attack time. Turn it down (minus value) to make the attack *sharper*, turn it up to make the attack *smoother*.

F5   DECY (DECAY TIME)
This adjusts the envelope (DCA) initial decay. Turn it down (minus value) to make the decay *sharper*, turn it up to make the decay *smoother*.

F6   RELS (RELEASE TIME)
This adjusts the envelope (DCA) release or final decay. Turn it up to make the sound fade out longer *after* releasing the keyboard.

F7   EFX (EFFECTS AMOUNT)
This adjusts the effects level, such as chorus and distortion.

F8   REV (REVERB AMOUNT)
This adjusts the reverb level. Turn it up to add more ambience.

KIT EDIT

Pressing EDIT brings up the Kit Edit menu:

```
B120  Standrd1                          Menu
> Kit Common          Inst Edit         75 <
> Kit Effect
> Kit Inst Select
```
Kit Edit arranges the instruments into a kit. Instrument Edit edits the instruments themselves.

EXITING EDIT MODE
Press EXIT to return to Play Mode. An alert message appears, asking if you want to save you edit before continuing. Press WRITE to save, or F8 (Quit) to exit without saving. To continue editing, press EDIT.

L1 KIT COMMON

The Kit Common page the patch name, and volume setting for the kit, as shown below.
```
B120  Standrd1                        Common
> -> Name Standrd1          Vol     120 <
> <-
   !"#$%&'()*+,-./0123456789:;<=>?
   @ABCDEFGHIJKLMNOPQRSTUVWXYZ[  ]^_
   `abcdefghijklmnopqrstuvwxyz{|}~
```

L1 and L2 move through the name forward and back, respectively. Use the Value dial to select a letter.

R1   VOLUME
Sets the master volume for the kit.

L2 KIT EFFECT

This sets the effects for the drum kit. See page 79 for an explanation of the effects section.

```
C001  NewWorld                        Effect
Algorithm 1
 1 ─┌E1├─┤E2┐
 2 ─┤                                
 3 ─────────┤E3├─┤E4├─┤Rev├─┤GEQ├──Main
 4 ────────────────────────────────Indv
[Alg] [E1] [E2] [E3] [E4] [Rev] [GEQ] [Ctrl]
```
NOTE:
These effects are not used when a kit in combined into a Combi or used in Compose mode – the effects settings in the Combi or Song is used instead. When the K5000W is used in General MIDI mode, the GM preset is used.

L3 KIT INSTRUMENT SELECT

This page routes the percussion instruments to individual keys, to create a *kit* of drums.

```
┌──────────────────────────────────────────────┐
│  B120  Standrd1                   Inst Select │
│ > Note No.        38                          │
│ > Inst No.        24                          │
│   ┌──────────────────────────────────────┐    │
│   │▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌▐▌│    │
│   └──────────────────────────────────────┘    │
└──────────────────────────────────────────────┘
```

There are a total of 285 percussion instruments, 253 preset and 32 user-programmable (U1 – U32). These instruments are arranged by note to create a kit. Each kit can have a total of 64 instruments, assigned from C#0 (25) to E5 (88).

L1   NOTE NUMBER

This parameter responds to keyboard or MIDI) control of the Note Number. A dot on the keyboard in the display moves to show the key played. You can also turn the Value dial to select notes.

L2   INSTRUMENT NUMBER

As you change notes, the Instrument Number changes to show which instrument is assigned to the note. You can change the assigned instrument by turning the Value dial.

R1   INSTRUMENT EDIT

This leads to the instrument editing section. Use the Value dial or the keyboard to select an instrument number, then press R1. The Instrument Edit menu appears:

```
┌──────────────────────────────────────────────┐
│  B120  Standrd1  024                   Menu   │
│ > Common                                      │
│ > Control & DCO                               │
│ > DCF                                         │
│ > DCA                                         │
│                                               │
└──────────────────────────────────────────────┘
```

The following menus appear by pressing the buttons L1 – L4.

L1   COMMON

```
┌──────────────────────────────────────────────┐
│  B120  Standrd1  32                  Common   │
│                                               │
│ > Effect Path       4                         │
│ > Excl Group        0                         │
│ > Gate        Note Off                        │
└──────────────────────────────────────────────┘
```
L2   EFFECT PATH

The instrument is routed to one of the four Effects inputs by this parameter. For more information, see the Effects section page 79.

L3 EXCL GROUP

Instruments grouped together so that only one of them will play at any one time. For example, if Open and Closed Hi Hat sounds are grouped together, then playing a closed hi-hat sound will cutoff the open sound. There are seven exclusive groups, numbers 1 – 7; when OFF, no group is assigned.

L4 GATE

Sets the response to Note On and Note Off for the instrument. The gate time can be set to a short or longer duration (1 – 32), or can stay on until the note is released (Note Off).

Percussion instruments generally do not have a deliberate end to each note – each percussion note is caused by the instantaneous attack of a stick on a head, a hammer on a string. There is no sustain, only decay.

For other instrument families, there is a deliberate start and end to each note played – the Note On and Note Off. The sax player starts blowing to begin a note and stops blowing to end it. It can sustain as long as the player can blow.

L2 CONTROL & DCO

This page has parameters to control the volume, wave, and pitch of the sound.
CONTROL PARAMETERS:

L1 VOLUME

This sets the volume of the selected instrument. Use this parameter to adjust the relative mix of the instruments in the kit.

L2 PAN

Sets the Pan from left to right.

L3 COARSE

Sets the coarse pitch of the sound, in semitones. 0 is the original sample pitch.

L4 FINE

Fine tuning of the sound, 0 is the original sample pitch.

DCO PARAMETERS:

R1 PCM WAVE NUMBER

Selects the PCM wave to be used. See page 162 for a list of waves.

R2 ENVELOPE START LEVEL

Most percussion instruments have some pitch change during the note attack, the DCO envelope can be used to create, accentuate, or minimize this.

Sets the starting level for the envelope. A positive number means the sound will start at a higher pitch, then come down to 0 (the Coarse pitch), A negative number means the sound will start low and come up to 0.

R3 ENVELOPE ATTACK TIME

When a note is played (note on), the envelope will go from the Start level to 0 in this amount of time.

R4   VELOCITY TO ENVELOPE LEVEL

This controls how much the key velocity affects the *amount* of DCO envelope.

L3   DCF

Pressing DCF in the Inst Edit menu brings up the following screen which contains the DCF parameters.

```
  B120  Standrd1 32                              DCF
> Cutoff              127
> Velo to Cut         +31
```
L1   CUTOFF

Sets the basic filter cutoff frequency.

L2   VELOCITY TO CUTOFF

Controls how much the Velocity affects the filter cutoff frequency.

L4   DCA

The Digitally Controlled Amplifier (DCA) sets the volume of the sound. It is controlled by an envelope to shape a sound's overall transient characteristics.

The DCA envelope screen shows a visual representation of the envelope.

```
  B120  Standrd1 32                    DCA Envelope
                                          VEL TO
> Atak T  127                          Level    63  <
> Decy T  127                          Attack  +63  <
> Dcay L  127                          Decy T  +63  <
> Rels T  127
```
L1   ATTACK TIME

When a note is played (note on), the envelope will go from zero to maximum in this amount of time. A short attack time gives a sharp edge to the start of the sound like a piano. A long attack give a more legato effect.

L2   DECAY TIME

After reaching the maximum, the envelope will then go to the decay level in this amount of time.

L3   DECAY LEVEL

After reaching the maximum, the envelope will then go to this level.

L4   RELEASE TIME

When a note is released (gate off) the envelope will return to zero in this amount of time.

MODULATION BY VELOCITY:

R1   ENVELOPE LEVEL

Uses velocity to control the maximum amount of the envelope. A harder (louder) key will have more envelope dynamics and a softer key will have less dynamics.

R2　ATTACK TIME
Uses velocity to control the attack time. With a positive value, a harder (louder) key will have a longer attack time and a softer key will have a shorter attack time.

In nature, softer notes generally have a *longer* attack time than louder notes. Using *negative* amounts of this parameter will simulate this.

R3　DECAY TIME
Uses velocity to control the decay time. With a positive value, a harder (louder) key will have a longer decay time and a softer key will have a shorter time.

WRITE

After editing, save your sound by pressing the WRITE button in the COMMON section of the front panel. The following screen appears.
L1　WRITE

This saves your patch to the internal memory area.
R1　WRITE LOCATION
Use the Value dial to select a location to save your patch.

F1 / F2　CHARACTER
This names the patch. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8　EXECUTE
Stores the patch.

L2 DISK WRITE

You can also write KIT Patches to disk. This is useful if your internal memory is full.
```
┌─────────────────────────────────────────────────────┐
│ B120  Standard1                            Disk Wr   │
│ Edit  bf>Disk                                        │
│  ┌────────────────────────────────────────────────┐ │

└─────────────────────────────────────────────────────┘
```

F1 / F2 CHARACTER
This names the file on the disk. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8 EXECUTE
Press Execute to save the file. It will be saved with the file extension shown after the name.

R1 DELETE

Since there is not a fixed number of ADD patches in the A Bank, you may need to delete patches to make room for new ones.
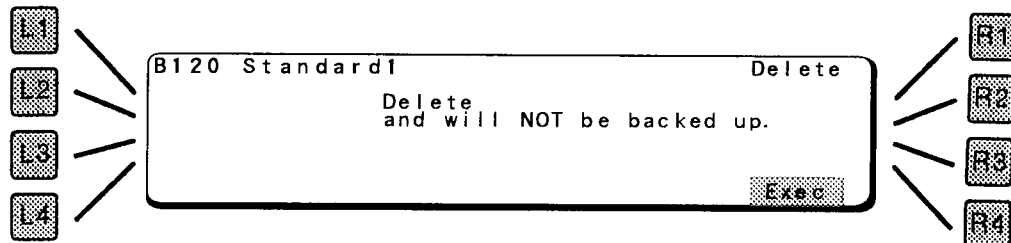

Use the Value dial to choose the patch to delete, and press F8 (Execute). Sure? Press F8 to continue.

COMBI SECTION

Combi Patches are *combinations* of up to four Single patches. They can be arranged in layers, key splits, velocity splits, or any combination.

No matter how they are arranged, Combis are designed to be played *as a group*. The entire combi responds to a single MIDI channel.

Multi-timbral / multi-channel arrangements are done in the Compose Mode.

COMBI PLAY

Pressing the Perform key on the left side of the keyboard brings up the Single Play window. Press Combi to change to Combi mode.

```
┌─────────────────────────────────────────────────┐
│  C07          Moonrise                           │
├──────────┬──────────┬──────────┬─────────────────┤
│ Chimera  │ Runner   │ SynStrg1 │ GO OM           │
│   1   ⊤  │   2   ⊤  │   3   ⊤  │   4   ⊤         │
│  0    96 │ +12   97 │  0   104 │  0   120        │
│ Trns│Vol │ Trns│Vol │ Trns│Vol │ Trns│Vol        │
└──────────┴──────────┴──────────┴─────────────────┘
```

The name of the Combi patch is displayed as well as the name, transpose, and volume for each Single patch that it contains.

SELECTING COMBI PATCHES

To select a one of the 64 Combi patches, use the Patch Select keys 0 through 9 on the right side of the panel. To change banks, use the Patch Select keys 00 through 06. The Bank menu screen appears as shown below.

```
┌─────────────────────────────────────────────┐
│ Combi  Bank  Menu                            │
│  ┌──────────────────────┬──────────────────┐ │
│  │ C10   Komradds       │ C15   E-Normus   │ │
│  │ C11   Addalogg       │ C16   Raunch     │ │
│  │ C12   Addalog2       │ C17   TakeOver   │ │

    [F1] [F2] [F3] [F4] [F5] [F6] [F7] [F8]
```

F1   TRANSPOSE SECTION 1
This parameter adjusts the pitch of Section 1, in semitones. To raise a sound one octave, set the transpose to 12; to lower it one octave, set the transpose to -12.

F2   VOLUME SECTION 1

This parameter adjusts the volume of Section 1.

F3   TRANSPOSE SECTION 2

This parameter adjusts the pitch of Section 2, in semitones.

F4   VOLUME SECTION 2

This parameter adjusts the volume of Section 2.

F5   TRANSPOSE SECTION 3

This parameter adjusts the pitch of Section 3, in semitones.

F6   VOLUME SECTION 3

This parameter adjusts the volume of Section 3.

F7   TRANSPOSE SECTION 4

This parameter adjusts the pitch of Section 4, in semitones.

F8   VOLUME SECTION 4

This parameter adjusts the volume of Section 4.

COMBI EDIT

Pressing EDIT brings up the Combi Edit Menu, below.

```
 C021  K-Hit!                          Menu
>  Common
>  Section
>  Effect
```

L1   COMMON
This jumps to the Common edit, below.

L2   SECTION
This jumps to Section edit, discussed on the next page.

L3   EFFECT
Jumps to the Effect section, page 79.

NOTE:
Press EXIT to return to the Combi Edit Menu.

EXITING EDIT MODE

From the Combi Edit Menu, press EXIT. An alert message appears, asking if you want to "Save and Quit". Press WRITE to save and quit to Combi Play mode, or F8 (Quit) to return to Combi Play mode without saving. To continue editing, press EDIT.

COMMON

Enter the name of the Combi patch from this page.

```
 C021  K-Hit!                          Common
>  ->   Name  K-Hit!
>  <-
        !"#$%&'()*+,-./0123456789:;<=>?
        @ABCDEFGHIJKLMNOPQRSTUVWXYZ[0]^
        abcdefghijklmnopqrstuvwxyz{|}-
                                        More
```

L1 and L2 select which character is selected, the Value dial selects the desired letter or number.

F8   MORE
This advances to the Volume page.

```
┌─────────────────────────────────────────────────────┐
│ C021 K-Hit!                            Common        │

```

L1   VOLUME
This sets the master volume for the Combi patch.

F1   BACK
This returns to the Name page.

SECTION

The Section pages contain parameters to setup each of the four sections of a Combi Patch.

SELECTING A SECTION

The Section parameters are duplicated for each section in a Combi patch. To select a section, press the function key for the desired section (F2 – F5). In the display above, Section 1 is selected.

ENABLING / MUTING SECTIONS

Turning individual sections on and off is useful for editing. In addition, many Combi patches do not need all four sections enabled.

With the desired section selected (highlighted), press the section function key again (F2 – F5). The Section will turn on or off each time the function button is pressed.

In the display above, Sections 1 and 2 are enabled (Sec1), Sections 3 and 4 are muted (S--4). The "ec" changes to "--" when a section is muted.

SECTION MENU FUNCTIONS

L1   SINGLE PATCH
Selects the Single patch for this section.

L2   SECTION VOLUME
Adjusts the volume for the section.

L3 SECTION PAN

Adjusts the stereo pan for the section.

L4 EFFECT PATH

Routes this section to one of the four inputs of the effects section. For more on the Effects, please see page 79.

Effect Path routes the Section to one of these Effect inputs
R3 TRANSPOSE

Adjusts the transposition of the selected section, in semitone increments. A transposition of +12 is one octave higher.

R4 FINE

Adjusts the tuning of the section.

F8 MORE

Jumps to the Zone screen, below.

SECTION KEY AND VELOCITY ZONES
L1 ZONE LO

Sets the lowest note that will be played. The keyboard graphic visually shows the range. The selected section is highlighted.

L2 ZONE HI

Sets the highest note that will be played.

R1 VELOCITY SWITCH

Sets the velocity range. At Loud, only hard (loud) notes will sound. At Soft, only soft notes will sound. When set to OFF, the velocity switch is turned off and notes play at all velocity levels.

R2 VALUE

Sets the threshold between high and low velocity. This is the MIDI velocity number.

F1 BACK

Press to return to the previous screen.

WRITE

After editing, save your Combi by pressing the WRITE button in the COMMON
section of the front panel. The following screen appears.

```
 C007  Moonrise
> Write
```
L1 WRITE

This saves your patch to the internal memory area.
R1 WRITE LOCATION
Use the Value dial to select a location to save your patch.

F1 / F2 CHARACTER
This names the patch. Use the F1 and F2 keys to select a character in the name
(moves the cursor), and the Value dial to select a letter.

F8 EXECUTE
Stores the patch.

EFFECT SECTION

The Effect section contains the settings for the digital effects generator.

There is one Effect generator for the entire K5000. When in Single mode, the entire effect generator is available for the sound. When in Combi or Compose mode, the effects settings of the Single patch are disregarded, and the Combi or Song effects settings are used instead.

EFFECT PAGE PARAMETERS

The main effects page displays a block diagram of the algorithm selected.

```
┌──────────────────────────────────────────────────┐

```

VALUE DIAL   ALGORITHM SELECT
The algorithm can be selected by turning the Value dial. In Single mode, press
RI to access the Algorithm select.

FI   ALGORITHM PAGE
Returns to the Algorithm Page, *this page,* from other effects pages.
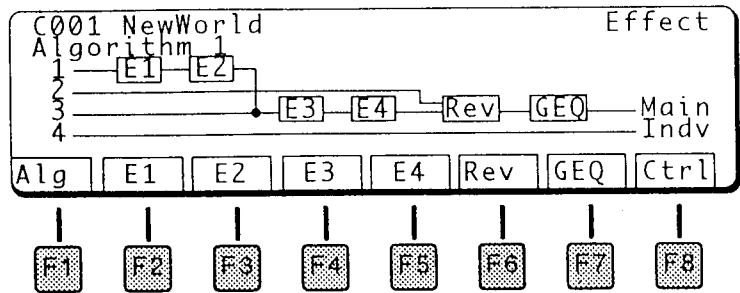

F2   EI (EFFECT I)
Goes to the edit parameters for the Effect 1 block. Any of the effects blocks can
be assigned one of 36 different effects, which include a variety of delays,
chorus, flanging, and distortion. The available controls vary from one effect to
another.

See page 85 for a description of the 36 available effect types.

F3   E2 (EFFECT 2)
Goes to the edit parameters for the Effect 2 block.

F4   E3 (EFFECT 3)
Goes to the edit parameters for the Effect 3 block.

F5   E4 (EFFECT 4)
Goes to the edit parameters for the Effect 4 block.

F6   REVERB
Goes to the edit parameters for the Reverb block. The reverb block can be
assigned one of 11 different reverb types, which include a variety of rooms,
halls and, plates. The available controls vary from one reverb type to another.

See page 110 for a description of the available reverb types.

F7   GRAPHIC EQ
Goes to the edit parameters for the Graphic EQ block.

```
┌──────────────────────────────────────────────────┐
│ A001 ABCDEFGH                      Graphic EQ      │
│                                                    │
│     ╥      ╫     ╥     ╫      ╫      ╫     ╫        │
│  ───╨──────╨─────╨─────╨──────╨──────╫─────╫───    │
│                                                    │
│    +12     0    -12     0    ±2     -2    0dB      │
│ ┌───┐┌────┐┌────┐┌────┐┌────┐┌────┐┌────┐┌────┐    │
│ │ALG││100 ││200 ││450 ││ 1K ││ 2K ││ 4K ││ 8K │    │
│ └───┘└────┘└────┘└────┘└────┘└────┘└────┘└────┘    │
└──────────────────────────────────────────────────┘
   │     │     │     │     │     │     │     │
 [F1]  [F2]  [F3]  [F4]  [F5]  [F6]  [F7]  [F8]
```
Use the F2 through F8 keys to select an EQ band, and the Value dial to change the amount. The slider will change to visually indicate the setting, the number underneath shows the exact amount.

F8 CONTROL
Goes to the Effect Controller page. Two controllers can be used to control effect or reverb depth. An expression pedal could be used to add reverb or aftertouch pressure could be used to add chorusing.
LI SOURCEI
Selects the source for the modulation. The source can be any of those listed below.

L2 DESTINATION I
Selects the destination for the modulation. This can be the level of the reverb, or a modulatable parameter in one of the four effects blocks (Effect1 – Effect4).

L3 DEPTHI
Sets the amount of the modulation. This can be positive or negative.

RI SOURCE2
Selects the source for the modulation. The source can be any of those listed below.

R2 DESTINATION2
Selects the destination for the modulation. This can be the level of the reverb, or a modulatable parameter in one of the four effects blocks (Effect1 – Effect4).

R3 DEPTH2
Sets the amount of the modulation. This can be positive or negative.

MODULATION SOURCES
The sources that can be used to control the effects are:

BENDER
The Pitch Bend wheel.

CH PRESS (CHANNEL PRESSURE)
Aftertouch pressure (per channel).

WHEEL
The Modulation Wheel

EXPRESS (EXPRESSION PEDAL)
The Expression Pedal

MIDI VOLUME
The MIDI Volume commend, MIDI Controller 7

PANPOT
The MIDI Pan commend, MIDI Controller 10

The eight MIDI General Purpose Controllers – Continuous Controllers 16–19 &
80–83.

SOURCE ASSIGNMENT GRID (SINGLE PATCH ONLY)

In Single mode, the Source Assignment Grid on the left side of the screen is used to
connect the (up to) six sources in each patch to the four inputs of the effect algo-
rithm.

Press any of the left hand buttons to access the Source Assignment Grid.

Source Number (Use Value dial to change)

Input Assignment (Use L1 – L4 to change)
Shows source 1 assigned to input 3
VALUE DIAL

Selects which source to assign. Sources 1 through 6 are displayed, but only the
sources actually used in the Single patch can be assigned.

L1   INPUT 1 ASSIGN

L2   INPUT 2 ASSIGN

L3   INPUT 3 ASSIGN

L4   INPUT 4 ASSIGN

After selecting a source with the value dial, press the L1, L2, L3, or L4 buttons
to assign that source to input 1, 2, 3, or 4, respectively. The number 1, 2, 3, or
4 is displayed in the column indicating its assignment.

ALGORITHMS

Anatomy of an Effect Algorithm
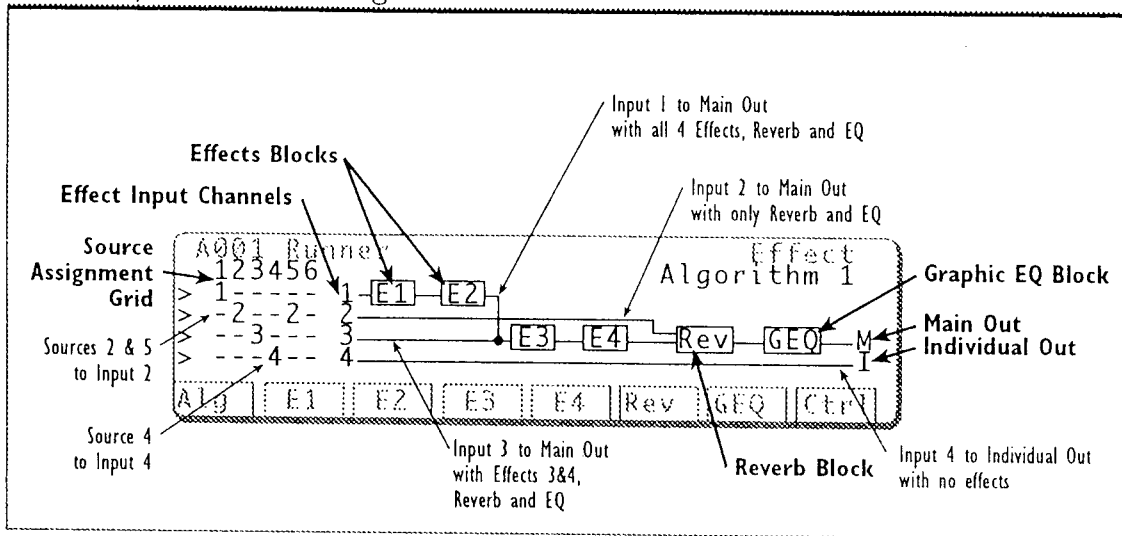

The Value dial (**R1**) selects the effect algorithm to be used. There are four different algorithms available, and the arrangement of the effects blocks varies depending upon the algorithm chosen.

There are four input channels into the effects algorithms. In Single mode, the left of the block diagram shows the Source Assignment Grid, with controls routing of each source to the input channels. In Combi ot Compose mode, the assignment of each single section to the four input channels is controlled by the Effect Path function in the Section menu.

ALGORITHM I
Input 1 passes through all four effects blocks, on its way to the reverb, EQ and main outputs. It merges with input 3 after the second effects block.

Input 2 goes directly to the reverb block, EQ, and main outputs. It has its own wet/dry mix in the reverb block.

Input 3 passes through two of the four effects blocks, on its way to the reverb, EQ and main outputs.

Input 4 goes directly to the Individual outputs without any effect, reverb or EQ. This is useful for sending sounds directly out of the K5000W for external signal processing.

ALGORITHM 2

```
┌────────────────────────────────────────────────┐
│ A001 Runner                          Effect      │
│    123456                         Algorithm 2    │
│ > 1 ----- 1 ┤E1├─┐                               │
│ > -2----- 2 ─────┤E2├┐                           │
│ > --3--- 3 ───────────┤E3├─┐ ┌Rev├─┤GEQ├─M       │
│ > ---4-- 4 ────────────────┤E4├─┘           I    │
│ ┌Alg│ │ E1 │ │ E2 │ │ E3 │ │ E4 │ │Rev │ │GEQ │ │Ctrl││
└────────────────────────────────────────────────┘
```

In this algorithm, each input goes through its own effects block, then the four are paired together for reverb and EQ.

ALGORITHM 3

```
┌────────────────────────────────────────────────┐
│ A001 Runner                          Effect      │
│    123456                         Algorithm 3    │
│ > 1 ----- 1 ┤E1├─┐                               │
│ > -2----- 2 ─────┤E2├┐                           │
│ > --3--- 3 ───────────┤E3├─┐ ┌Rev├─┤GEQ├─M       │
│ > ---4-- 4 ────────────────┤E4├─┘           I    │
│ ┌Alg│ │ E1 │ │ E2 │ │ E3 │ │ E4 │ │Rev │ │GEQ │ │Ctrl││
└────────────────────────────────────────────────┘
```

In this algorithm, each input goes through its own effects block, then 1, 2, and 3 are combined for reverb and EQ.

Input 3 has its own wet/dry mix in the reverb block.

After passing through its effect, Input 4 goes directly to the Individual outputs. This could be useful for a Bass sound running through a phaser, but without reverb.

ALGORITHM 4

```
┌────────────────────────────────────────────────┐
│ A001 Runner                          Effect      │
│    123456                         Algorithm 4    │
│ > 1 ----- 1 ┤E1├─┤E2├┐                           │
│ > -2----- 2 ─────────┤                           │
│ > --3--- 3 ───────────┤E3├─┤E4├─┤Rev├─┤GEQ├─M    │
│ > ---4-- 4 ────────────────────────────────I     │
│ ┌Alg│ │ E1 │ │ E2 │ │ E3 │ │ E4 │ │Rev │ │GEQ │ │Ctrl││
└────────────────────────────────────────────────┘
```
Input 1 passes through the E1 and E2 effects blocks, on its way to the reverb, EQ and main outputs. It merges with input 2 after the second effects block.

Input 2 goes directly to the reverb block, EQ, and main outputs.

Input 3 passes through E3 and E4 of the four effects blocks, on its way to the reverb, EQ and main outputs. It has its own wet/dry mix in the reverb block.

Input 4 goes directly to the Individual outputs without any effect, reverb or EQ.

EFFECT TYPES
The four effects blocks represent individual effects. Any of the effects blocks can be assigned one of 36 different effects, which include a variety of delays, chorus, flanging, and distortion. The available controls vary from one effect to another.

EARLY REFLECTION 1
EARLY REFLECTION 2

LI TYPE
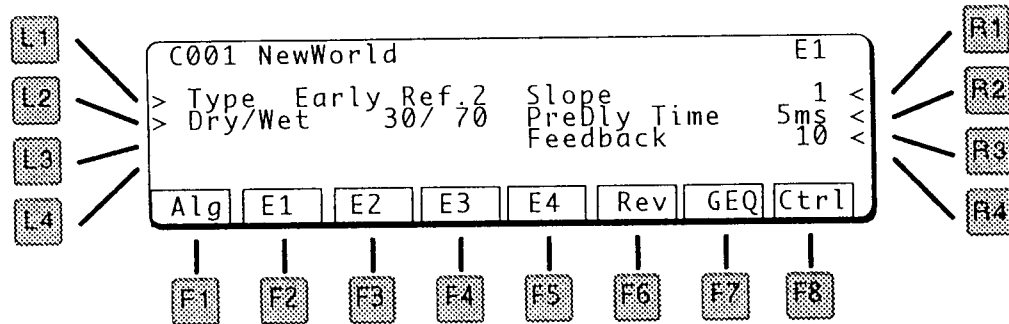

Selects the type of effect. Early Reflection 1 has a shorter reflection time than Early Reflection 2.
L2 DRY/WET

Controls the ratio between the original sound (dry) and the effected sound (wet).

RI SLOPE

This softens the reflection by changing the delay amplitudes. See diagram.

R2   PREDELAY TIME
The amount of delay time before the effect.

R3   FEEDBACK
Amount of delay looped back into the input. This creates a repeating delay.

TAP DELAY 1
TAP DELAY 2

```
C001 NewWorld                                    E1
> Type      Tap Dly1       Dly Time 1   150mS  <
> Delay Level 100          Tap Level      90   <
                           Dly Time 2   175mS  <
                           Feedback       50   <
   Alg   E1    E2    E3    E4    Rev   GEQ  Ctrl
```
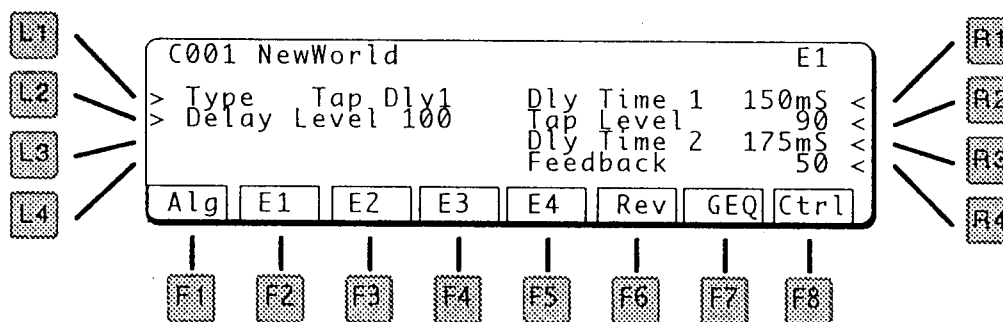

LI   TYPE
Selects the type of effect.

TAP DELAY 1
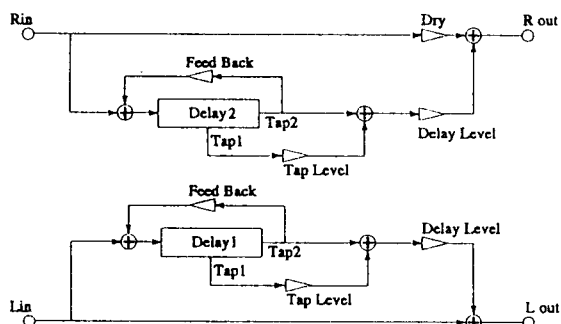

TAP DELAY 2

$T_1 = Tap_1$ Delay Time
$T_2 = Tap_2$ Delay Time
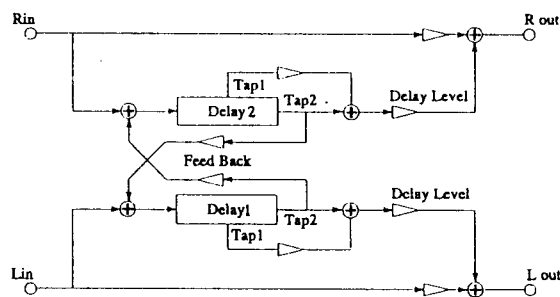

L2   DELAY LEVEL
Master level of this effect block.

RI   DELAY TIME I
The delay time for delay 1.

R2   TAP LEVEL
The level of delay 1.

R3   DELAY TIME 2
The delay time for delay 2.

R4 FEEDBACK
Amount of delay looped back into the input. This creates a repeating delay. The original sound (input) and Delay 1 are repeated together at the delay 2 time.

SINGLE DELAY

This effect has a single delay, with a fine time adjustment for synchronizing to the beat.
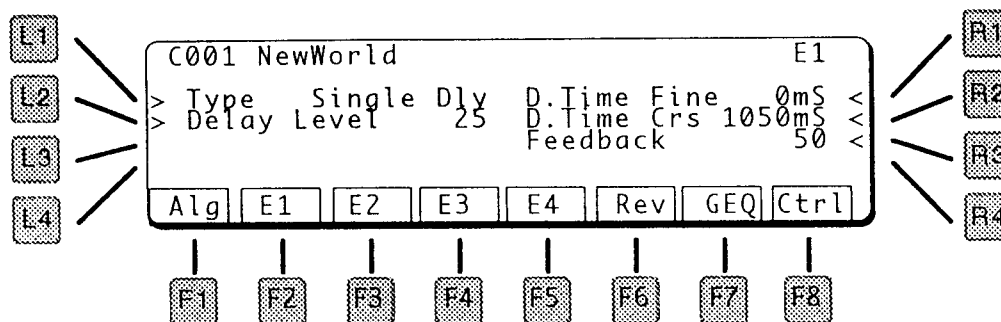

LI TYPE
Selects the type of effect.

Delay Time = Delay Coarse + Delay Fine
L2 DELAY LEVEL
Master level of this effect block.

RI DELAY TIME FINE
Adjusts the delay time in 1 mS increments, from 0 - 9 mS.

R2 DELAY TIME COARSE
Adjusts the delay time in 10mS increments, from 0 - 1270 mS. (1.27 seconds)

R3 FEEDBACK
Amount of delay looped back into the input. This creates a repeating delay.

DUAL DELAY

This effect has two delays, panned hard left and right.
```
C001 NewWorld                                    E1
> Type          Dual Dly    Dly Time L    150mS <
> Delay Level        25     Feedback L       60 <
                           Dly Time R    230mS <
                           Feedback R       50 <
 Alg   E1    E2    E3    E4    Rev   GEQ  Ctrl
```

LI   TYPE
Selects the type of effect.
L2   DELAY LEVEL
Master level of this effect block.

RI   DELAY TIME LEFT
Adjusts the delay time from 0 - 720mS.

R2   FEEDBACK LEFT
Amount of delay looped back into the input. This creates a repeating delay.

R3   DELAY TIME RIGHT
Adjusts the delay time from 0 - 720mS.

R4   FEEDBACK RIGHT
Amount of delay looped back into the input. This creates a repeating delay.

STEREO DELAY

This is a single stereo delay. Repeats maintain the same stereo panning as the original signal.

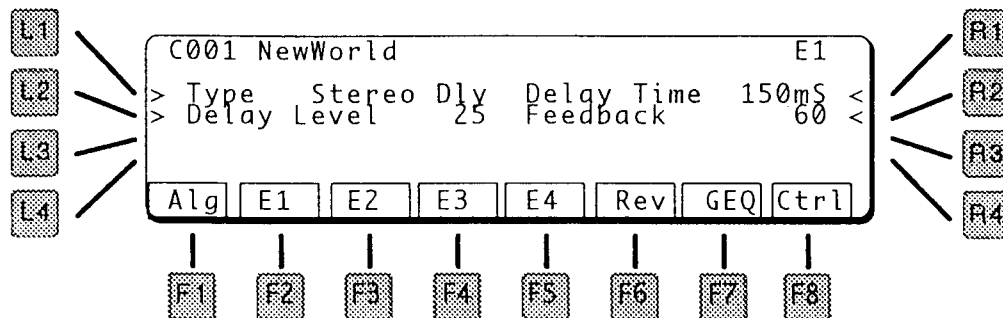

```
C001 NewWorld                              E1
> Type      Stereo Dly   Delay Time    150mS <
> Delay Level       25   Feedback          60 <

 Alg   E1    E2    E3    E4    Rev   GEQ  Ctrl
```

L1   TYPE
Selects the type of effect.

L2   DELAY LEVEL
Master level of this effect block.

R1   DELAY TIME
Adjusts the delay time from 0 - 720 mS.

R2   FEEDBACK
Amount of delay looped back into the input. This creates a repeating delay.

CROSS DELAY

Cross Delay is a single delay, with repeats alternating left and right.

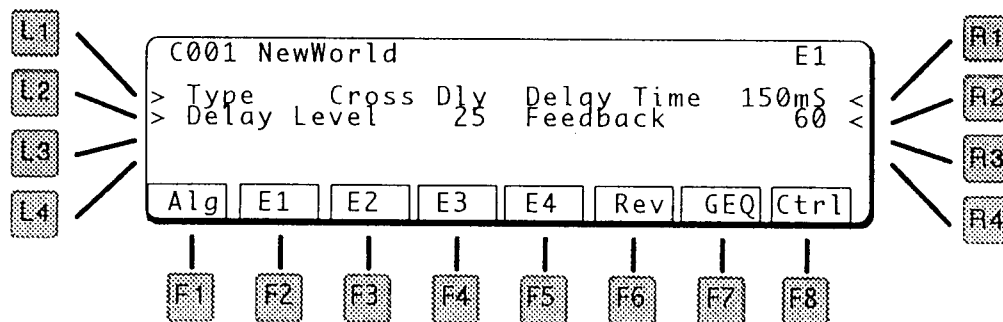

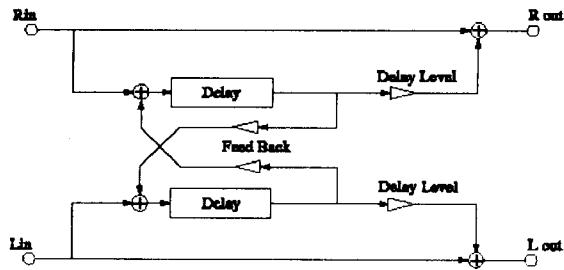

```
C001 NewWorld                              E1
> Type       Cross Dly   Delay Time    150mS <
> Delay Level       25   Feedback          60 <

 Alg   E1    E2    E3    E4    Rev   GEQ  Ctrl
```

L1 TYPE

Selects the type of effect.

L2 DELAY LEVEL

Master level of this effect block.

R1 DELAY TIME

Adjusts the delay time from 0 - 720 mS.

R2 FEEDBACK

Amount of delay looped back into the input. This creates a repeating delay.

AUTOPAN

Auto Pan moves the input source back and forth across the stereo field.
L1 TYPE

Selects the type of effect.
L2 DRY/ WET

Controls the ratio between the original (dry) and the panned sound (wet).

R1 SPEED

Adjusts the panning speed.

R2 DEPTH

Controls how wide the panning is.

R3   PREDELAY TIME
Adds a delay (up to 100mS) before the panned sound starts

R4   WAVE
Selects the LFO waveform used to control the panning. The choices are SINe or TRIangle.

AUTO PAN & DELAY

Auto Pan moves the input source back and forth across the stereo field, with an added delay.
```
C001  NewWorld                        E1
> Type    AutoPan & D   Speed           12  <
> Dry/Wet        22/ 78  Depth          100  <
                         Delay  Time   34mS  <
                         Wave             Sin <
   Alg   E1   E2   E3   E4   Rev  GEQ  Ctrl
```

LI   TYPE
Selects the type of effect.

L2   DRY/WET
Controls the ratio between the original (dry) and the panned sound (wet).

RI   SPEED
Adjusts the panning speed.

R2   DEPTH
Controls how wide the panning is.

R3   DELAY TIME
Delays the panned sound (up to 200mS) The repeating delay does not pan.

R4   WAVE
Selects the LFO waveform used to control the panning. The choices are SINe or TRIangle.

CHORUS I
CHORUS 2

Chorus is a slight detune of the sound, which adds depth and richness to the sound. Great for guitars, electric pianos, organs, strings, choirs.

Chorus 1 is a true stereo in / stereo out chorus – the left and right channels are independent.

Chorus 2 is a mono in / stereo out chorus – the left and right channels are summed together before entering a stereo chorus unit.

```
C001 NewWorld                                    E1
> Type         Chorus1    Speed              12 <
> Dry/Wet        0/100    Depth             100 <
                          PreDly Time       34mS
                          Wave               Sin <

 Alg | E1 | E2 | E3 | E4 | Rev | GEQ | Ctrl
```

LI   TYPE
Selects the type of effect.

CHORUS I   CHORUS 2

L2   DRY/WET
Controls the ratio between the original (dry) and the chorused sound (wet).

RI   SPEED
Adjusts the chorus speed.
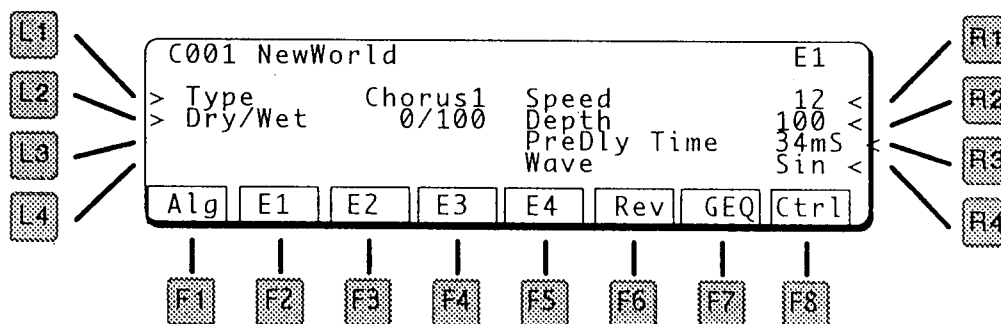

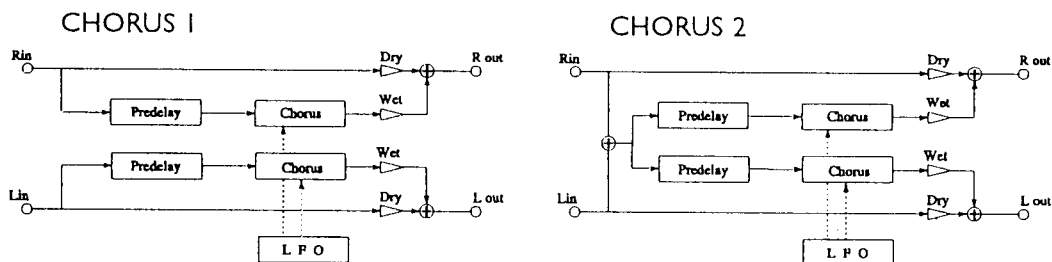

R2   DEPTH
Controls how wide the detune is.

R3   PREDELAY TIME
Adds a delay (up to 100mS) before the chorus sound starts.

R4   WAVE
Selects the LFO waveform used to control the panning. The choices are SINe or TRIangle.

CHORUS 1 & DELAY
CHORUS 2 & DELAY

Chorus 1 is a true stereo in / stereo out chorus – the left and right channels are independent.
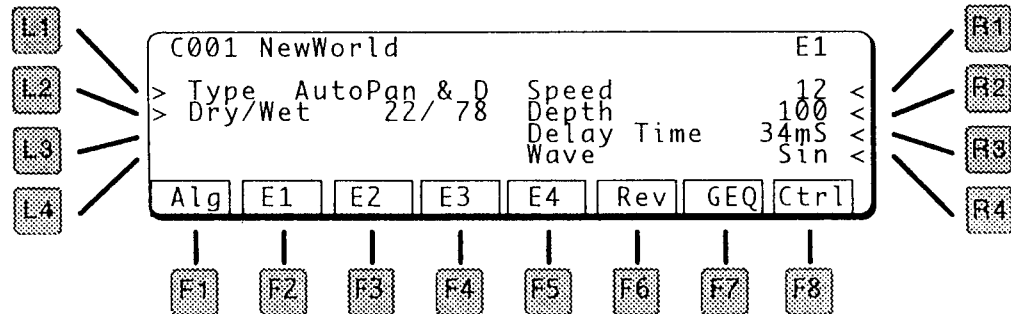

Chorus 2 is a mono in / stereo out chorus – the left and right channels are summed together before entering a stereo chorus unit.

```
C001 NewWorld                                 E1
> Type   Chorus1 & D   Speed              12 <
> Dry/Wet      0/100   Depth             100 <
                       Delay Time       34mS <
                       Wave              Sin <
   Alg   E1   E2   E3   E4   Rev   GEQ  Ctrl
```

L1   TYPE
Selects the type of effect.

CHORUS 1   CHORUS 2
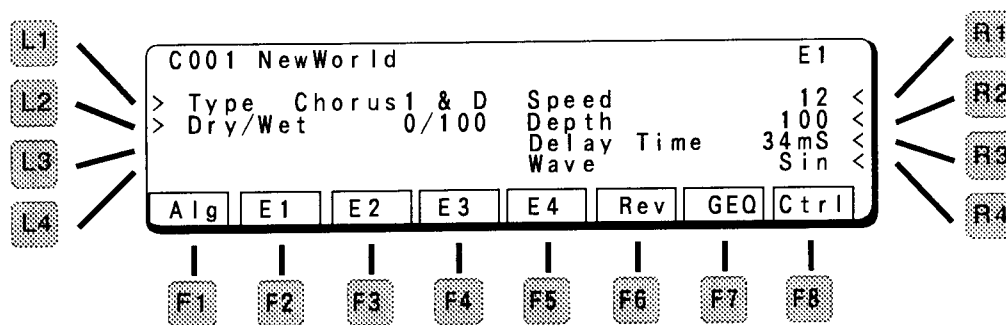

L2   DRY/ WET
Controls the ratio between the original (dry) and the chorused sound (wet).

R1   SPEED
Adjusts the chorus speed.

R2   DEPTH
Controls how wide the detune is.

R3   DELAY TIME
Adds a repeating delay of the chorused sound (up to 200mS)

R4   WAVE
Selects the LFO waveform used to control the panning. The choices are SINe or TRIangle.

FLANGER I
FLANGER 2

Flange is a slight detune of the sound, with an airy phasing, which adds depth to the sound. Great for guitars and electric pianos.

In Flanger 1, the flange control is 180° out of phase between the left and right channels. In Flanger 2, the flange control is *in* phase between the left and right channels.

LI   TYPE
Selects the type of effect.
L2   DRY/WET
Controls the ratio between the original (dry) and the flanged sound (wet).

RI   SPEED
Adjusts the flanger speed.

R2   DEPTH
Controls how wide the detune is.

R3   PREDELAY TIME
Adds a delay (up to 100mS) before the flanger starts.

R4   FEEDBACK
Controls the feedback of the flanging sound.

FLANGER 1 & DELAY
FLANGER 2 & DELAY

In Flanger 1, the flange control is 180° out of phase between the left and right channels. In Flanger 2, the flange control is in phase between the left and right channels.

```

```

LI   TYPE
Selects the type of effect.

L2   DRY/WET
Controls the ratio between the original (dry) and the flanged sound (wet).

RI   SPEED
Adjusts the flanger speed.
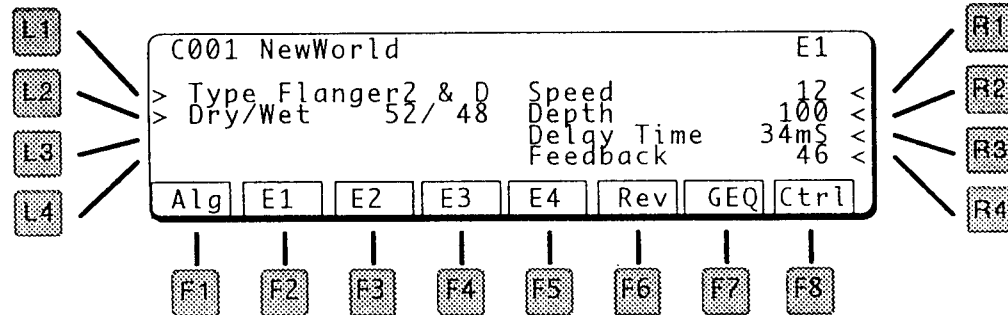

R2   DEPTH
Controls how wide the detune is.

R3   DELAY TIME
Adds a repeating delay of the flanged sound (up to 200mS).

R4   FEEDBACK
Controls the feedback of the flanging sound. Does not affect the delay.

ENSEMBLE

Ensemble is a three phase chorus, with each of the three chorus units at a different phase and frequency. This gives a slightly richer sound than the Celeste effect, below.
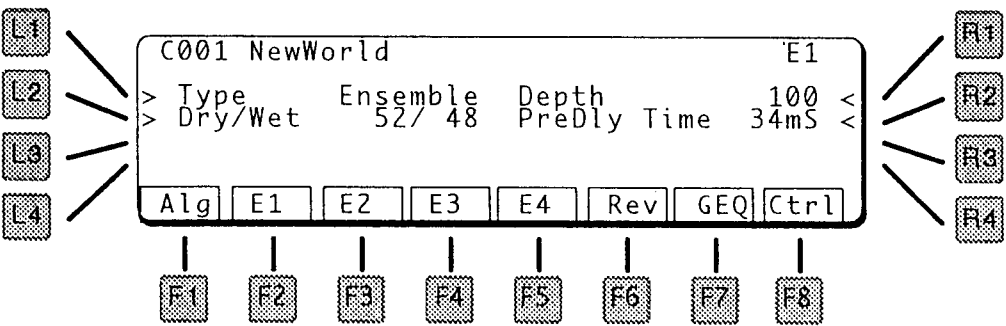

```
C001 NewWorld                              E1
> Type        Ensemble    Depth          100 <
> Dry/Wet      52/ 48     PreDly Time    34mS <

 Alg   E1   E2   E3   E4   Rev   GEQ  Ctrl
```

L1 TYPE
Selects the type of effect.

L2 DRY/WET
Controls the ratio between the original (dry) and the chorused sound (wet).

R1 DEPTH
Adjusts the amount of effect.

R2 PREDELAY TIME
Adds a delay (up to 100mS) before the ensemble starts.

ENSEMBLE & DELAY
```
C001 NewWorld                              E1
> Type  Ensemble & D   Depth          100 <
> Dry/Wet      52/ 48  Delay Time     34mS <

 Alg   E1   E2   E3   E4   Rev   GEQ  Ctrl
```

L1 TYPE
Selects the type of effect.

L2 DRY/ WET
Controls the ratio between the original (dry) and the chorused sound (wet).

R1 DEPTH
Adjusts the ensemble depth.

R2 DELAY TIME
Adds a repeating delay of the Ensemble sound (up to 200mS).

CELESTE

Celeste is a three phase chorus, with each of the three chorus units at a different phase.

```
C001 NewWorld                        E1
> Type          Celeste   Speed           6 <
> Dry/Wet        52/ 48   Depth         100 <
                          PreDly Time  34mS <

 Alg    E1    E2    E3    E4    Rev   GEQ  Ctrl
```

L1 TYPE
Selects the type of effect.
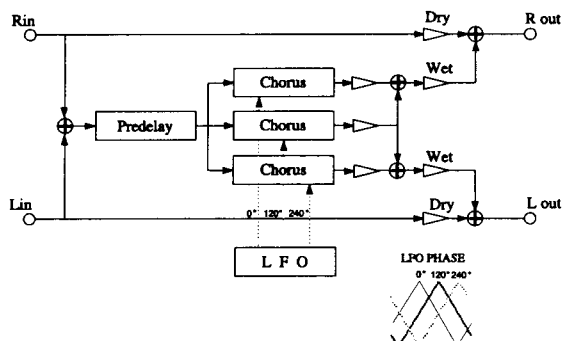

L2 DRY/ WET
Controls the ratio between the original (dry) and the chorused sound (wet).

R1 SPEED
Adjusts the ensemble speed.

R2   DEPTH
Controls how wide the detune is.

R3   PREDELAY TIME
Adds a delay (up to 100mS) before the celeste starts.

CELESTE & DELAY

```
C001  NewWorld                          E1
> Type    Celeste & D    Speed          6  <
> Dry/Wet      52/ 48    Depth         100 <
                         Delay Time    34mS <

 Alg   E1   E2   E3   E4   Rev   GEQ  Ctrl
```

LI   TYPE
Selects the type of effect.

L2   DRY/WET
Controls the ratio between the original (dry) and the chorused sound (wet).

RI   SPEED
Adjusts the ensemble speed.

R2   DEPTH
Controls how wide the detune is.

R3   DELAY TIME
Adds a repeating delay of the Celeste sound (up to 200mS).

TREMOLO

Tremolo changes the volume of the sound, making it louder and softer. Can be used for surf guitar sounds.

```
C001 NewWorld                                  E1
> Type       Tremolo    Speed              6  <
> Dry/Wet      30/ 70   Depth            100  <
                        PreDly Time     34mS  <
                        Wave             Sin  <
  Alg   E1    E2    E3    E4   Rev   GEQ Ctrl
```

LI TYPE
Selects the type of effect.

L2 DRY/WET
Controls the ratio between the original (dry) and the tremolo sound (wet).

RI SPEED
Adjusts the tremolo speed.

R2 DEPTH
Controls how deep the tremolo is.

R3 PREDELAY TIME
Adds a delay (up to 100mS) before the tremolo starts.

R4 WAVE
Selects the LFO waveform used to control the tremolo. The choices are SINe or TRIangle.

TREMOLO & DELAY

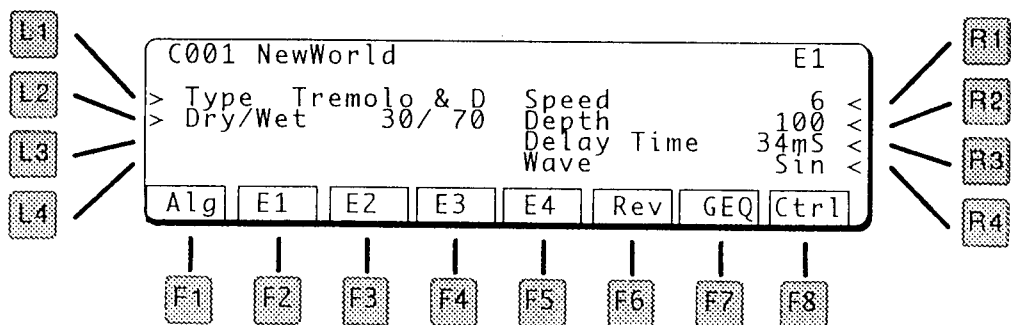

```
C001 NewWorld                                  E1
> Type   Tremolo & D   Speed              6  <
> Dry/Wet      30/ 70  Depth            100  <
                       Delay Time      34mS  <
                       Wave             Sin  <
  Alg   E1    E2    E3    E4   Rev   GEQ Ctrl
```

LI TYPE

Selects the type of effect.

L2 DRY/WET

Controls the ratio between the original (dry) and the tremolo sound (wet).

RI SPEED

Adjusts the tremolo speed.

R2 DEPTH

Controls how deep the tremolo is.

R3 DELAY TIME

Adds a repeating delay of the tremolo sound (up to 200mS).

R4 WAVE

Selects the LFO waveform used to control the tremolo. The choices are SINe or TRIangle.

PHASER I
PHASER 2

The phaser creates a phase change in the sound, adding motion to the sound. Good for any sustain sounds, such as strings and organ, as well as for electric pianos and other vintage guitar sounds.

Phaser 1 is a true stereo in / stereo out phase shifter – the left and right channels are independent.

Phaser 2 is a mono in / stereo out phase shifter – the left and right channels are summed together before go into to a stereo phase shifter.
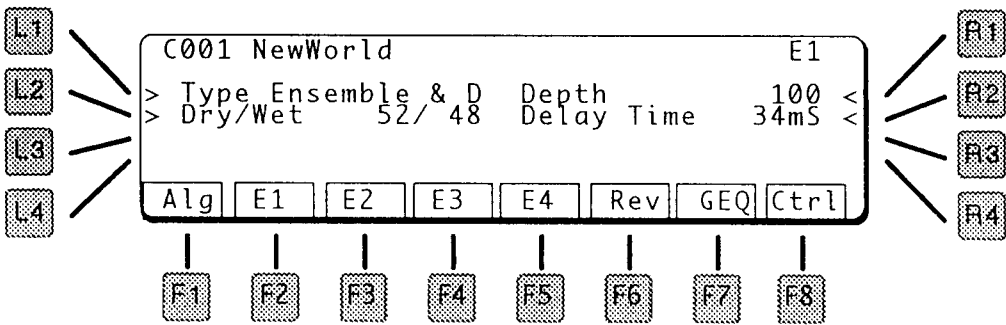

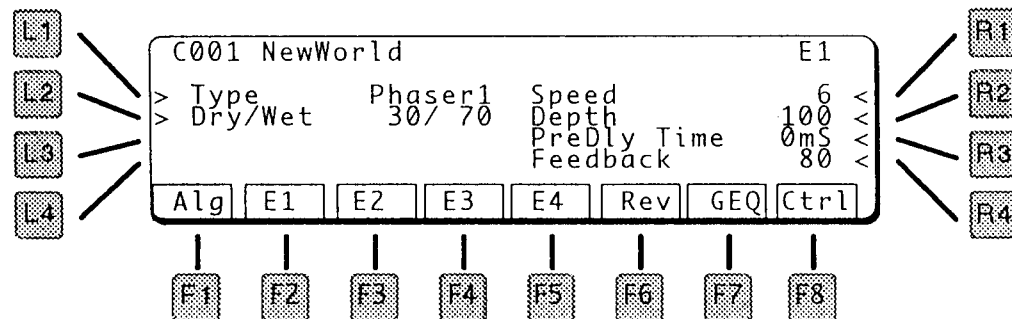

LI TYPE

Selects the type of effect.

L2 DRY/WET

Controls the ratio between the original (dry) and the phaser sound (wet).

RI SPEED

Adjusts the phaser speed.

R2 DEPTH

Controls how wide the phasing is.

R3 PREDELAY TIME

Adds a delay (up to 100mS) before the phasing starts.

R4 FEEDBACK

Feeds the sound back into itself, creating a longer sustained sound.
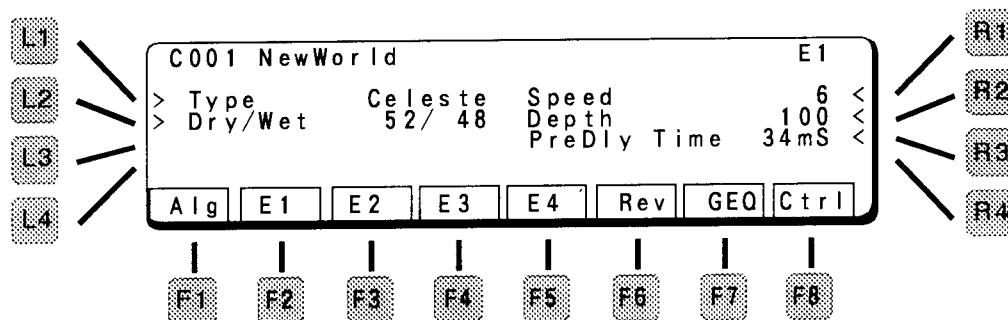

PHASER I & DELAY
PHASER 2 & DELAY

LI TYPE

Selects the type of effect.
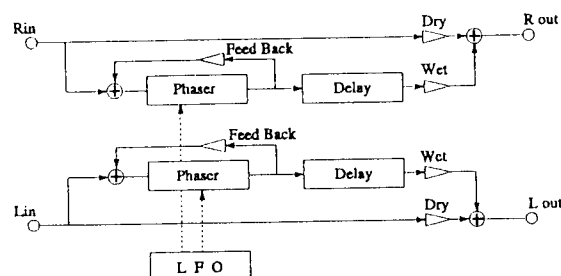

L2 DRY/WET

Controls the ratio between the original (dry) and the phaser sound (wet).

R1   SPEED
Adjusts the phaser speed.

R2   DEPTH
Controls how wide the phasing is.

R3   DELAY TIME
Adds a repeating delay of the phaser sound (up to 200mS).

R4   FEEDBACK
Feeds the sound back into itself, creating a longer sustained sound.

ROTARY

This offers a two speed phasing effect, designed to simulate the slow and fast switching of an organ rotary speaker.

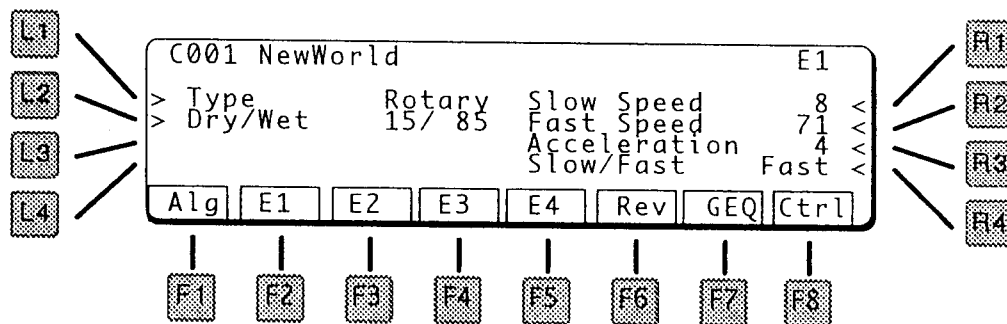

```
C001 NewWorld                              E1
> Type          Rotary    Slow Speed        8  <
> Dry/Wet       15/ 85    Fast Speed       71  <
                          Acceleration      4  <
                          Slow/Fast      Fast  <
  Alg   E1   E2   E3   E4   Rev   GEQ  Ctrl
```

L1   TYPE
Selects the type of effect.

L2   DRY/WET
Controls the ratio between the original (dry) and the rotary sound (wet).

R1   SLOW SPEED
Adjusts the slow rotary speed.
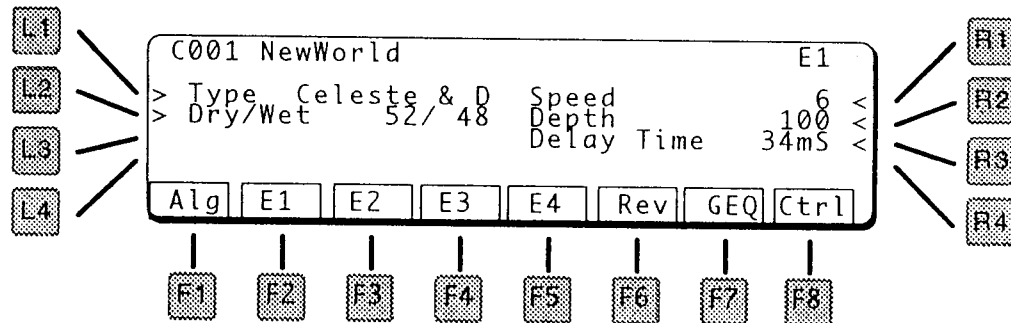

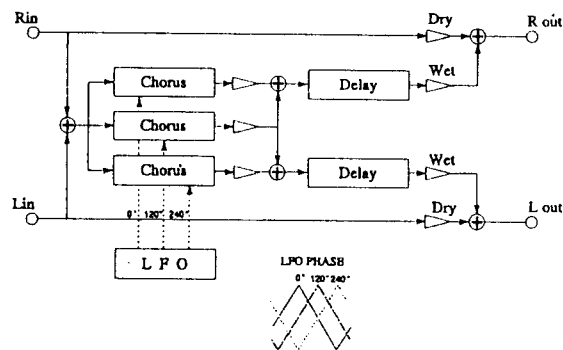

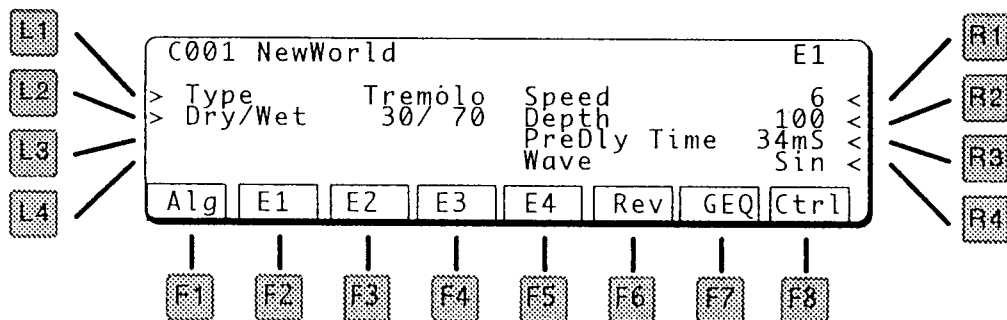

R2   FAST SPEED
Adjusts the fast rotary speed.

R3   ACCELERATION
Controls the time it takes to switch from slow to fast or fast to slow.

R4 SLOW/FAST SWITCH

Changes between slow and fast. When this parameter is changed, the rotary changes to the other speed at a rate determined by the Acceleration parameter. You can control this parameter using the Effect Controller, page 81.

AUTO WAH

The Auto Wah sweeps the filter up and down on note attack, simulating a wah wah pedal.
LI TYPE

Selects the type of effect.
L2 DRY/WET

Controls the ratio between the original (dry) and the wah sound (wet).

RI SENSE

Adjusts the sensitivity of the wah effect to the key velocity. The harder the note is played, the higher the wah will sweep.

R2 FREQUENCY BOTTOM

Sets the starting and ending filter point.

R3 FREQUENCY TOP

Sets the peak point of the filter sweep.

R4 RESONANCE

Adjusts the filter resonance, for more of a pronounced "wah" effect.

BANDPASS

The Bandpass effect filters out sound above and below the filter point. This can be used to create "telephone" sound, for example, or music playing out of a small radio.
```
┌─────────────────────────────────────────────────┐
│ C001 NewWorld                              'E1   │

```

LI   TYPE
Selects the type of effect.
L2   DRY/WET
Controls the ratio between the original (dry) and the filtered sound (wet).

RI   CENTER FREQUENCY
Adjusts the center point for the bandpass filter.

R2   BAND WIDTH
Adjusts how wide the filtering will be on either side of the Center Frequency.

EXCITER

The Exciter emphasizes high frequencies to make a sound more easily discernible in a mix. The exciter uses to distortion to achieve its emphasis.

```
┌──────────────────────────────────────────────────┐
│ C001 NewWorld                              E1     │

└──────────────────────────────────────────────────┘
```

LI   TYPE
Selects the type of effect.
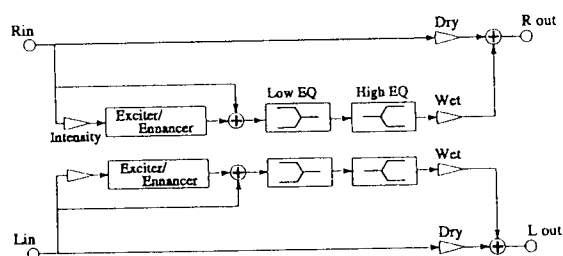

L2   DRY/WET
Controls the ratio between the original (dry) and the excited sound (wet).

RI   EQ LOW
Adjust frequencies below the exciter point.

R2   EQ HIGH
Adjust frequencies above the exciter point.

R3   INTENSITY
Adjusts the amount of exciter effect.

ENHANCER

The Enhancer emphasizes high frequencies to make a sound more easily discernible in a mix. The Enhancer uses to phase shift and filtering to achieve its emphasis.
```
┌──────────────────────────────────────────────────┐
│ C001 NewWorld                              E1     │

## L1 TYPE

Selects the type of effect.
L2 DRY/WET

Controls the ratio between the original (dry) and the enhanced sound (wet).

R1 EQ LOW

Adjust frequencies below the enhanced point.

R2 EQ HIGH

Adjust frequencies above the enhanced point.

R3 INTENSITY

Adjusts the amount of enhancement.

OVERDRIVE

The overdrive effect adds distortion and sustain for electric guitar "fuzz" type sounds. It is a softer type of distortion than the Distortion effect, below.
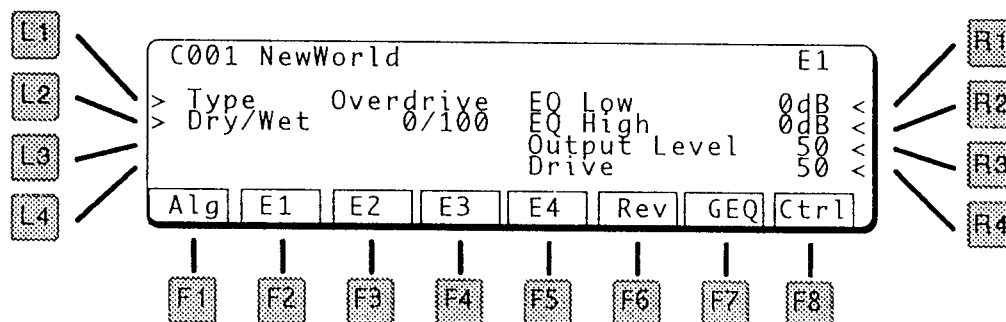

L1 TYPE

Selects the type of effect.
L2 DRY/WET

Controls the ratio between the original (dry) and the distorted sound (wet).

R1 EQ LOW

Adjusts the low frequencies of the overdrive effect.

R2 EQ HIGH

Adjusts the high frequencies of the overdrive effect.

R3 OUTPUT LEVEL

Adjusts the level of the overdrive effect.

R4 DRIVE

Adjusts the amount of distortion.

DISTORTION

The distortion effect adds a harder distortion and sustain for electric guitar "fuzz" type sounds.

LI TYPE

Selects the type of effect.

L2 DRY/WET

Controls the ratio between the original (dry) and the distorted sound (wet).

RI EQ LOW

Adjusts the low frequencies of the distortion effect.

R2 EQ HIGH

Adjusts the high frequencies of the distortion effect.

R3 OUTPUT LEVEL

Adjusts the level of the distortion effect.

R4 DRIVE

Adjusts the amount of distortion.

OVERDRIVE & DELAY

Overdrive & Delay adds a slap echo delay to the overdrive sound. The result is an even longer sustained distortion sound.

```
┌─────────────────────────────────────────────────┐

```

LI TYPE
Selects the type of effect.

L2 DRY/WET
Controls the ratio between the original (dry) and the distorted sound (wet).

RI EQ LOW
Adjusts the low frequencies of the overdrive effect.

R2 EQ HIGH
Adjusts the high frequencies of the overdrive effect.

R3 DELAY TIME
Adjusts the time of the delay (up to 200mS).

R4 DRIVE
Adjusts the amount of distortion.

DISTORTION & DELAY

LI TYPE
Selects the type of effect.

L2 DRY/WET
Controls the ratio between the original (dry) and the distorted sound (wet).

RI EQ LOW
Adjusts the low frequencies of the overdrive effect.

R2 EQ HIGH
Adjusts the high frequencies of the overdrive effect.

R3 DELAY TIME
Adjusts the time of the delay (up to 200mS).

R4 DRIVE
Adjusts the amount of distortion.

REVERB TYPES

=[Rev]=

The Reverb block represents reverberation effects. Any of eleven different reverb types can be assigned, which include a variety of rooms, halls, and plates. The available controls vary from one effect to another.

As can be seen from the block diagram, there are two inputs to the reverb section. Each reverb screen has a pair of Wet/Dry parameters, one for each input. These two *reverb sends* allow you to adjust the reverb balance for each input independently.

HALL 1
Standard Hall

HALL 2
Small Hall

HALL 3
Bright Hall
L2 DRY/WET 1
Controls the ratio between the original sound (dry) and the reverberated sound (wet) for the *top input* in the algorithm.

L3 DRY/WET 2
Controls the ratio between the original sound (dry) and the effected sound (wet) for the *bottom input* in the algorithm.

R1 REVERB TIME
Total reverberation time, in seconds.

R2 PREDELAY TIME
The amount of delay time before the effect.

R3 HIGH FREQUENCY DAMPING
In most natural acoustic spaces, high frequencies are absorbed faster than low frequencies. High Frequency Damping simulates this phenomenon by causing the high frequencies to die out faster. The more damping, the faster they die out – and sounds like there is more carpet or drapes in the room. Concrete room? Set the damping to 1.

ROOM 1
ROOM 2

Bright Room

L2 DRY/WET 1
Controls the ratio between the original sound (dry) and the reverberated sound (wet) for the *top input* in the algorithm.

L3 DRY/WET 2
Controls the ratio between the original sound (dry) and the effected sound (wet) for the *bottom input* in the algorithm.

R I REVERB TIME
Total reverberation time, in seconds.

R2 PREDELAY TIME
The amount of delay time before the effect.

R3 HIGH FREQUENCY DAMPING
In most natural acoustic spaces, high frequencies are absorbed faster than low frequencies. High Frequency Damping simulates this phenomenon by causing the high frequencies to die out faster.

PLATE I
PLATE 2
PLATE 3
L I TYPE
Selects the type of effect.

PLATE I
Large Plate

PLATE 2
Small Plate

PLATE 3
Mellow Plate
L2 DRY/WET I
Controls the ratio between the original sound (dry) and the reverberated sound (wet) for the *top input* in the algorithm.

L3 DRY/WET 2
Controls the ratio between the original sound (dry) and the effected sound (wet) for the *bottom input* in the algorithm.

R1   REVERB TIME
Total reverberation time, in seconds.

R2   PREDELAY TIME
The amount of delay time before the effect.

R3   HIGH FREQUENCY DAMPING
In most natural acoustic spaces, high frequencies are absorbed faster than low frequencies. High Frequency Damping simulates this phenomenon by causing the high frequencies to die out faster.

REVERSE

Instead of decaying as natural reverb does, reverse reverb builds up as shown in the diagram below.
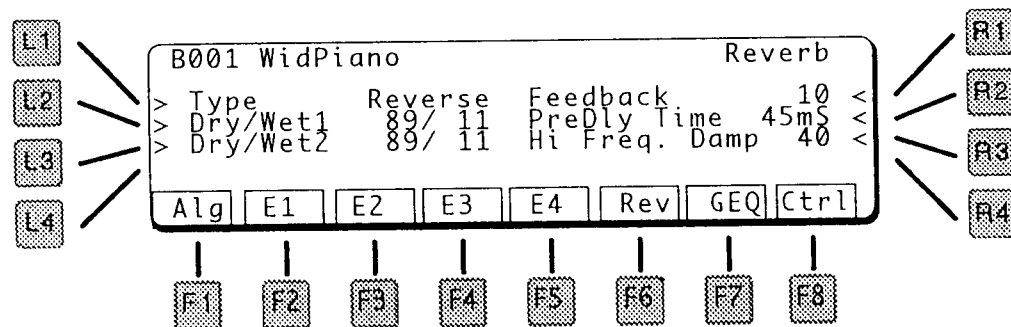

L1   TYPE
Selects the type of effect.
L2   DRY/WET 1
Controls the ratio between the original sound (dry) and the reverberated sound (wet) for the *top input* in the algorithm.

L3   DRY/WET 2
Controls the ratio between the original sound (dry) and the effected sound (wet) for the *bottom input* in the algorithm.

R1   FEEDBACK
Amount of delay looped back into the input. This creates a repeating delay.

R2 PREDELAY TIME

The amount of delay time before the effect.

R3 HIGH FREQUENCY DAMPING

Attenuates high frequencies from each repeat.

LONG DELAY

```
B001 WidPiano                        Reverb
> Type    Long Delay   Feedback           10  <
> Dry/Wet1      89/ 11  Delay Time  1470mS  <
> Dry/Wet2      89/ 11  Hi Freq. Damp    40  <
  Alg  E1   E2   E3   E4   Rev  GEQ  Ctrl
```
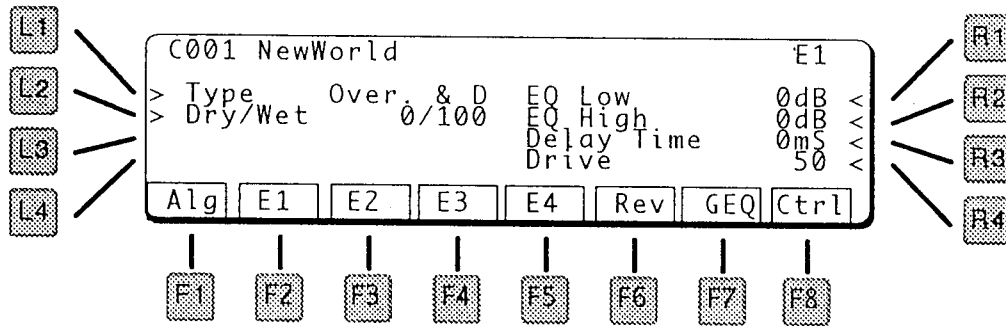

LI TYPE

Selects the type of effect.

L2 DRY/WET I

Controls the ratio between the original sound (dry) and the delayed sound (wet) for the *top input* in the algorithm.

L3 DRY/WET 2

Controls the ratio between the original sound (dry) and the delayed sound (wet) for the *bottom input* in the algorithm.

RI FEEDBACK

Amount of delay looped back into the input. This creates a repeating delay.

R2 DELAY TIME

Adjusts the delay time in 10mS increments, from 200 - 1470 mS. (1.47 seconds)

R3 HIGH FREQUENCY DAMPING

Attenuates high frequencies from each repeat.

COMPOSE MODE

Compose Mode is for creating music using the sonic timbres of the K5000W.

The K5000W Sequencer reads and writes Standard MIDI Files (SMF), so it is compatible with Standard MIDI Files found on diskette in music stores or on The Internet. Since most music sequencers read MIDI files on PC-format diskettes (even Macs!), most other computer music enthusiasts, whether professional or amateur, can play the music composed on your K5000W.

There are two main functions within Compose Mode: Recording and Editing. These functions are discussed in detail on the following pages.

SONG RECORD

The Recording Section is where music is recorded and played back. Each song is made up of 40 independent tracks, which can contain up to 40,000 notes.

The parameters on the screen control the settings for each track, while the Sequencer buttons on the front panel are the sequencer's "transport" and control the *movement* of the tracks: play, stop, record, etc.

SONG	DISK PLAY	APG

Selects the next group of tracks
There are 40 tracks in each song.

▲   ▼

There are two recording methods available in the K5000W: Real Time and Step Time. In Real Time recording, notes are recorded into the sequencer with the timing as they are played on the keyboard. In Step Time recording the timing of the notes played is disregarded, and the timing is assigned according to the settings on the Step Time recording page.

REAL TIME RECORD

Real time recording takes place on the track(s) selected for record. To record a track:

1. Press the REC button. The button lights up.

2. In the display, use the **F I** – **F8** keys to select the desired tracks for recording. Press once to select the track, then again to add the "**R**" next to the track number, indicating the track is enabled for recording. See the diagram at the top of this section.

3. Press PLAY. Both the REC and PLAY buttons will be lit, the metronome will start counting, and recording will start.

4. Press STOP to terminate the recording.

5. To play back the recording, press RESET to rewind to the beginning, then PLAY to playback.

NOTE:
There are 40 tracks in one song. Each track can record on only one channel, but more than one track can record at the same time.
LI   SONG NUMBER
The current Song. There are two songs available for recording in the K5000W, although more songs can be played directly from disk.

L2   CHANNEL
Sets MIDI Channel of the selected track, whether the sound will be played by the K5000W or an external MIDI device, and through which MIDI OUT port the track will play.
NOTE:
ADD patches (A Bank) can *only* play to/from the MIDI A Port. B Bank and General MIDI patches can play to/from either MIDI port.

L3   PROGRAM NUMBER.
Program Number and Name of the selected track.

RI   TEMPO
The initial tempo of the song. This may be changed during the song, if the Tempo Track is ON (see below)

R2   TIME SIGNATURE
The initial time signature of the song.

R3   TEMPO TRACK ON/OFF
The Tempo Track enables a song to change tempo during the song.

R4   SETUP
This brings up the Setup page, with parameters that apply to the Song itself:
LI   COUNT IN

Sets a countdown before recording starts. This can be 1 or 2 bars, or 0 (no count in).

L2   CLICK

Turns the metronome sound ON or OFF during recording.

NOTE:
If the Click is OFF, but the Count In is·on (i.e., 1 or 2 bars), then the Metronome will click during the *Count In only.*

L3   VOLUME

Sets the initial Volume of the selected track.

L4   PAN

Sets the left-right panning of the selected track.

RI   CLOCK

Selects the Clock Source.

INT
The K5000W is the clock source. All tempo settings in the song will be followed and transmitted.

EXT
The MIDI Beat Clock at the MIDI A INPUT is the clock source. All tempo settings in the song are overridden by the external MIDI clock.

R2   LOOP

If this is ON, a section of the song will repeat in playback. The start & end points are set below.

NOTE:
If the K5000W is placed into Record, Loop will be turned OFF.

R3   LOOP FROM

When Loop is ON, the Song will repeat starting at this bar.

NOTE:
If the Loop From point is set to a place *other than the beginning* of the song and the Song is played from the start, the song will play from the beginning to the Loop To point before returning to the Loop From point.

R4   LOOP TO

When Loop is ON, the Song will repeat at the completion of this bar.

FI – F8 TRACK SELECT BUTTONS

Press these buttons to select and change the status of a track. The settings are:

Blank Unrecorded

P Playback Enabled

R Record Enabled

– Recorded but Muted

Eight tracks are visible at one time. Press the Track Up and Down buttons to select additional tracks.

STEP TIME RECORD

As its name implies, step-time recording records one step at a time.

ENTERING STEP MODE

From the main recording screen, press and hold STOP, then press REC. The REC button lights up and the following screen appears:
LI   REC TRACK

This selects which track to record on. There are 40 tracks in each song. Before entering this screen, you should have set a MIDI channel and sound patch for this track in the main recording screen.

L2   BEAT/MEAS

Sets the Time Signature for the step recording about to take place.

STEP RECORDING

Once everything is set, press PLAY. The REC and PLAY buttons will now be lit, and the following screen will appear:
As you play notes on the keyboard this display will update. You can record chords by playing notes at the same time.

L1   NOTE/GATE/VELOCITY

Each key played will advance the sequencer by the Note value. The note will be assigned a duration (Gate) of 80% of the total note value, and a Velocity of 100. You can adjust any of these parameters during step Recording by pressing L1 to select a parameter, and the value dial to change it.

NOTE VALUE = 96
Equals quarter notes:

F1   TIE
While notes are held, pressing Tie makes the notes longer. That is, it ties the notes together.

TIE
Ties notes together: Resulting in:

F2   REST
Pressing the Rest button records a rest of the note value, rather than a note. You can change the value of a rest with the Note value parameter, the same as for notes

F3   BAR REST

Pressing the Bar Rest button fills out the remainder of the measure with rests. If pressed at the beginning of a bar, it inserts an entire bar rest.

REST
Adds a rest of the note value

BAR REST
Fills in rests to the end of the bar

F4   DELETE

Delete removes the last event and steps back to the previous entry – it functions like an *undo* for step recording.

F5   CHORD

To make a chord, press and hold Chord while playing additional notes. They will all be added to the current step.

CHORD
Lets you put more than one note on a step:
SONG EDIT

After recording, the K5000W offers a range of options for editing your MIDI performance.

While in Compose Mode, pressing EDIT brings up the Sequencer Edit menu.

```
┌─────────────────────────────────────────────────┐
│  SEQ                              Menu           │
│                                                  │
│  > Punch In/Out         Track Initial  <         │
│  > Bar Edit             Effect         <         │
│  > Event Edit                                    │
│  > Song Common                                   │
└─────────────────────────────────────────────────┘
```

LI PUNCH IN/OUT

```
┌─────────────────────────────────────────────────┐
│  SEQ                         Punch In/Out        │
│  SNG01 SONGDATA   001-01 04/04 Tempo=120         │
│  > Track             01   Start          001  <  │

│                           Punch Out      004  <  │
└─────────────────────────────────────────────────┘
```
LI   TRACK
Sets the track for Punch In recording. This track is Record Enabled.

L2   LOOP
If this is ON, the K5000W will loop between the Punch In and Out points *in Record*. This means each repetition *adds* to what was recorded, it does not replace the previous recording.

RI   START
Sets the starting bar for playback. This can be the same or earlier than the Punch In point. If earlier, it gives a preroll before recording starts.

R2   PUNCH IN
When Loop is ON, the Song will repeat starting at this bar.

NOTE:
If the Start Point is set earlier then the Punch In Point, the song will Play from the Start Point then start Recording at the Punch In point. If Loop is ON, the recording will loop back to the Punch In point, not the Start.

R3   PUNCH OUT
When Loop is OFF, the track will Punch Out of record at the completion of this bar. When Loop is ON, the track will jump back to the Punch In point and continue recording.

L2 BAR EDIT

This section contains edit functions that modify an entire measure or measures.
There are three pages of functions: Press More (F8) or Back (F1) to change pages.

You can edit the performance tracks as well as the special Tempo and Chord tracks.
The START/STOP keys are also active in Bar Edit functions, so you can check your
edits. If you don't like the results, you can UNDO the edit (F7).

PAGE ONE FUNCTIONS

```
┌─────────────────────────────────────────────┐
│ SEQ                        Bar Edit Menu     │
│ > Clock Move          Insert              <  │
│ > Event Extract       Insert Empty Bar    <  │
│ > Note Split          Erase               <  │
│ > Delete              Track Mix           <  │
│                                    [More]    │
└─────────────────────────────────────────────┘
```
LI CLOCK MOVE

This Function shifts the timing of a track relative to the others. A track can be
moved ahead or behind the beat, or offset for delay effects.

```
┌─────────────────────────────────────────────┐
│ SEQ                         Clock Move       │
│ > Track         TRK01                        │
│ > Clock           000                        │
│                                    [Exec]    │
└─────────────────────────────────────────────┘
```
LI TRACK
Selects the track to be moved.

L2 CLOCK
Sets the number of clocks to be moved. A positive value adds to the event start
times, which makes them *later*. A negative value subtracts from the event start
times, which makes them *earlier*.

L2 EVENT EXTRACT

Event Extract moves notes or other data from one track to another. The data is
removed from the source track. This is useful for removing unwanted control data
without removing the notes themselves.
```
┌─────────────────────────────────────────────┐
│ SEQ                        Event Extract     │
│ > Track         TRK01 --> TRK01              │
│ > Event         Control All                  │
│                                    [Exec]    │
└─────────────────────────────────────────────┘
```

L1   TRACK FROM --> TO
Select the source track, then press the L1 button again to move to the destination track.

L2   E V E N T
Selects which data will be moved.

DATA TYPES
CONTROL ALL
All continuous controllers, such as sustain, modulation wheel, volume, pan, and expression.

PROGRAM CHANGE AND BANK SELECT
Program Changes and messages to change patch banks (i.e., SingleA, SingleB, Combi)

CHANNEL PRESSURE
Standard keyboard aftertouch

POLYPHONIC KEY PRESSURE
Special aftertouch messages for individual keys. The K5000W neither transmits nor responds to these messages.

PITCH BEND
The pitch bend wheel

EXCLUSIVE
System exclusive data, such as patch data or other information unique to a particular instrument.

CONTROL EACH 000 – 127
Individual continuous controller, from 000 to 127. See the MIDI implementation for information about controller numbers.

L3 NOTE SPLIT

```
 SEO                              Note Split
> Track         TRK01  -->  TRK01
> Event         C  -2-G    8
                                        Exec
```
Event Extract moves a range of notes from one track to another. This is useful for spliting a 2-handed keyboard performance into separate tracks of left and right hands.

L1   TRACK FROM --> TO
Select the source track, then press the L1 button again to move to the destination track.

L2   E V E N T   R A N G E
Sets the range of notes to be moved. You can switch between the lower and upper range with the L2 key.

L4 DELETE

Deletes a range of measures in one or *all* tracks. The time is deleted as well.

```
  SEQ                              Delete
> Track           TRK01
> Bar             001-004

                                   [Exec]
```

LI   TRACK
Selects the track for deletion. If ALL is selected, the range will be deleted from all tracks in the song.

L2   BAR

Selects the range of bars to be deleted. Press the **L2** key to change between start and end measures.

In the screen above, everything from the beginning of bar 1 through the end of bar 4 will be deleted. Bar 5 will be moved to bar 1.

RI INSERT

This function takes a range of measures from one track and inserts them into a second track at a specific point. The existing data on the destination track is moved to accommodate the inserted bars, nothing is erased.
```
  SEQ                        Event Insert
> Track        TRK01 -->    TRK01
> Bar          001-004 --> 001

                                   [Exec]
```

LI   TRACK FROM --> TO

Select the source track, then press the L1 button again to move to the destination track.

NOTE:
The Source and Destination track can be the same – this is a good way to have a musical phrase repeat several times.

L2   BAR

Selects the range of bars to be inserted, and the insertion point in the destination track. Press the **L2** key to change between start and end measures.

R2 INSERT EMPTY BAR

This function adds blank space to one or *all* tracks.

```
┌─SEQ───────────────────────Event  Insert─┐
│                                          │
│ > Track        TRK01                     │
│ > Bar            001    Length      001 <│
│ > Beat/Meas     4/ 4                     │
│                                  ┌─────┐ │
│                                  │Exec │ │
└──────────────────────────────────┴─────┴─┘
```
LI   TRACK
Selects the track for the blank space. Tempo or Chord tracks can be added to, or All tracks can be selected.

L2   BAR
Selects the starting point for the empty bars.

L3   BEAT/MEAS
Sets the time signature for the empty bars to be inserted.

R2   LENGTH
Sets the number of bars to be inserted.

R3 ERASE

Erases a range of measures in a track. Unlike Delete (previous page), time is not removed – blank space is left behind.

```
┌─SEQ────────────────────────────Erase─┐
│                                        │
│ > Track       TRK01                    │
│ > Bar         001-002                  │
│                                ┌─────┐ │
│                                │Exec │ │
└─────────────────────────────────┴─────┴─┘
```
LI   TRACK
Selects the track for erasure. Tempo or Chord tracks can be erased as well.

L2   BAR
Selects the range of bars to be erased. Press the **L2** key to change between start and end measures.

In the screen above, everything from the beginning of bar 1 through the end of bar 2 will be erased.

R4 TRACK MIX

This adds the contents of one track to another.

```
┌─────────────────────────────────────────────┐
│  SEQ                              Track Mix   │
│                                               │
│ > Track          TRK01  --> TRK02             │
│                                               │
│                                               │
│                                      ┌──────┐ │
│                                      │ Exec │ │
└──────────────────────────────────────└──────┘─┘
```
LI   TRACK FROM --> TO

Use the L1 key to change between source and destination track. In the screen above, all data on track 1 will be combined with the data on track 2.

PAGE TWO FUNCTIONS

```
┌─────────────────────────────────────────────┐
│  SEQ                       Bar Edit Menu      │
│ > Copy               Transpose            <   │
│ > Quantize           Note Shift           <   │
│ > Velocity Modify    Crescendo            <   │
│ > Gate Time Modify   Compress Data        <   │
│ Back                                  More    │
└─────────────────────────────────────────────┘
```

LI   COPY

This function takes a range of measures from one track and copies them into a second track at a specific point. Unlike Insert (above) the existing data on the destination track is *not* moved, any existing data is replaced by the copy.
```
┌─────────────────────────────────────────────┐
│  SEQ                                   Copy   │
│ > Track        TRK01  --> TRK04               │
│ > Bar          001-002  --> 001               │
│ > From         SNG02                          │
│                                      ┌──────┐ │
│                                      │ Exec │ │
└──────────────────────────────────────└──────┘─┘
```

LI   TRACK FROM --> TO

Select the source track, then press the L1 button again to move to the destination track.

NOTE:
The Source and Destination track can be the same.

L2   BAR

Selects the range of bars to be copied, and the insertion point in the destination track. Press the **L2** key to change between start and end measures.

L3   FROM

Selects the Song to copy from.

L2 QUANTIZE

Quantizing lines up notes to the beats. This compensates for imperfect timing in a performance. Quantizing can also give a track a *robot-like* rhythmically perfect feel.

```
 SEQ                              Quantize
> Track        TRK01
> Bar          001-012
> Note Rng C -2-G  8
> Resolution  J 96   Tolernce  00>< 00 <
                                    [Exec]
```
L1 TRACK
Selects the track to be quantized.

L2 BAR
Selects the range of bars to be quantized. Press the **L2** key to change between start and end measures.

L3 NOTE RANGE
You can limit the quantizing to a particular range of notes, for example quantizing the bass and snare drum, while leaving the hi-hat unchanged.

L4 RESOLUTION
Notes will be quantized to the nearest note of this value. If set to 1/4 notes for example, all notes will be moved to play on the 1, 2, 3, or 4 beats – no notes will play anywhere else.

R4 TOLERANCE
This opens a window around the resolution beat. Any notes outside this window will be quantized – those inside the window will be left alone. This is good for fixing the notes that are way off, without touching the ones that are closeto the beat.

L3 VELOCITY MODIFY

This function makes notes louder or softer by adding or subtracting to the key velocities. The Velocity Modify function is useful for general adjustments – if there are individual notes that need modification, its easier to use Event Edit, page 132.
```
 SEQ                         Velocity Modify
> Track        TRK01
> Bar          001-012
> Velocity         0
                                    [Exec]
```

L1 TRACK
Selects the track to be modified.

L2 BAR
Selects the range of bars to be modified. Press the **L2** key to change between start and end measures.

L3 VELOCITY
Adds or subtracts this amount to the attack velocity of each note in the region.

L4 GATE TIME MODIFY

This function makes notes longer or shorter by adding or subtracting to their gate time, or duration. Gate Time Modify is useful for general adjustments – if there are individual notes that need modification, its easier to use Event Edit, page xxx.
```
 SEQ                          Gate Time Modify
 > Track        TRK01
 > Bar          001-012
 > Gate Time    10%
                                         Exec
```

LI TRACK
Selects the track to be modified.

L2 BAR
Selects the range of bars to be modified. Press the **L2** key to change between start and end measures.

L3 GATE TIME
Adds or subtracts this percentage to the duration of each note in the region.

RI TRANSPOSE

This function transposes notes up or down by adding or subtracting to their note number.
```
 SEQ                               Transpose
 > Track        TRK01
 > Bar          001-012
 > Transpose        0
                                         Exec
```

LI TRACK
Selects the track to be modified.

L2 BAR
Selects the range of bars to be modified. Press the **L2** key to change between start and end measures.

L3 TRANSPOSE
Transposes up or down by this amount. A value or +12 moves the notes up an octave.

R2 NOTE SHIFT

This function transposes individual pitches. This is useful for changing instruments on a drum track, or for shifting between major and minor.
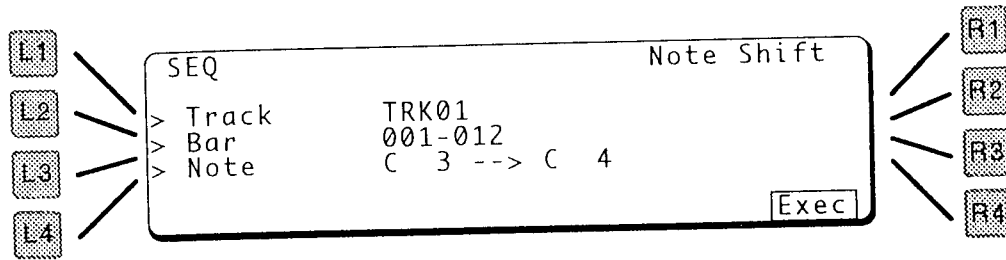

```
          SEQ                              Note Shift
          > Track        TRK01
          > Bar          001-012
          > Note         C  3 --> C  4
                                              [Exec]
```

L1   TRACK
Selects the track to be modified.

L2   BAR
Selects the range of bars to be modified. Press the **L2** key to change between start and end measures.

L3   NOTE FROM --> TO
Selects the note to be modified. Press the **L2** key to change between starting pitch and shifted pitch. You can also specify C** --> C#**, which will traspose *all* Cs to C#s.

R3 CRESCENDO

This function creates a crescendo or decrescendo by *gradually* adding or subtracting to the key velocities. Beginning at the start bar, the Crescendo function gradually modifies the note velocities by the Velocity percentage – at the end bar the notes are modified by the full amount.
```
          SEQ                              Crescendo
          > Track        TRK01
          > Bar          001-012
          > Velocity      10%
                                              [Exec]
```

L1   TRACK
Selects the track to be modified.

L2   BAR
Selects the range of bars to be modified. Press the **L2** key to change between start and end measures.

L3   VELOCITY
Gradually adjusts the note velocities from 100% (no change) to the selected percentage. The range is 10% – 200%.

R4 COMPRESS DATA

This function reduces the amount of data used by controllers by reducing the number of individual changes for the selected controller.

Continuous controllers such as pitch bend, modulation or pressure generate a tremendous number of messages, taking up valuable memory space and MIDI bandwidth. You will often find that you can improve the performance of your sequence without any audible difference by simplifying controller data.
```
SEQ                              Compress Data
> Track        TRK01
> Bar          001-012
> Event        Channel Pressure
                                          Exec
```

LI   TRACK
Selects the track to be modified.

L2   BAR
Selects the range of bars to be modified. Press the **L2** key to change between start and end measures.

L3   EVENT
Selects the controller to modified.

AVAILABLE CONTROLLERS
CHANNEL PRESSURE
Standard keyboard aftertouch

POLYPHONIC KEY PRESSURE
Special aftertouch messages for individual keys.

PITCH BEND
The pitch bend wheel

MODULATION DEPTH
The modulation wheel

VOLUME
MIDI Volume, controller 7

PAN POT
MIDI Pan, controller 10

EXPRESSION
MIDI Expression pedal, controller 11

```

└───────────────────────────────────────┘
```

L1   GROOVE QUANTIZE

Standard quantizing can give a track an undesired, *robot-like* feel. In an attempt to reduce this, Groove Quantize quantizes the track against a preset "groove", rather than an absolutely perfect note value.

```
┌─ SEQ                        Groove Quantize ─┐
│                                              │
│ > Track        TRK01                         │
│ > Bar          001-012                       │
│ > Groove No.       4                         │
│ > Strength        10                         │
│                                   Exec       │
└──────────────────────────────────────────────┘
```

L1   TRACK
Selects the track to be quantized.

L2   BAR
Selects the range of bars to be modified. Press the **L2** key to change between start and end measures.

L3   GROOVE NUMBER
Select the groove to be used.

0	Off	No groove
1–8	$\frac{1}{8}$ triplet	Quantization based in eight-note triplets
9	$\frac{1}{16}$ triplet	Quantization based in sixteenth-note triplets
10	Swing	Swing quantization

L4   STRENGTH
Adjusts much quantizing will be applied. 10 equals full (*and rather random*) quantizing. A small amount (less than 4) gives musical results.

L3 EVENT EDIT

Event Edit enables you to examine your performance note by note to fix or remove mistakes, adjust timings, or other fine tuning.

Current Event
Will be played, deleted, replaced, etc.

```
SEO                              Event Edit
  TRK01                         001-01 04/04
    Bar  Beat  Step  Event            Value
->001  01    09    Note  C   1       125    33
  001  02    00    Beat
  001  02    17    Note  E   1        76    14
  001  02    48    Control            64   127
  <      >    DEL    INS   REPL   TRK
```

F1 F2 F3 F4 F5 F6 F7 F8
LI   BAR BEAT STEP EVENT
Pressing this key, moves the cursor to the third line of display, from where you can use the F1 and F2 keys to navigate.

FI   <
F2   >
These move the cursor across the third line of the display, between Bar, Beat and Event. Turn the Value dial to scroll through the event list. If Event is highlighted, each note will sound as it goes by.

F3   DELETE
This deletes the current event.

F4   INSERT
Switches to the Insert Event screen. Here you can add a note or other event.

```
SEO                       Event Edit Insert
  TRK01                                04/04
>   Bar  Beat  Step  Event           Value
 ->001  01    00    Bar

 >  001  01    09    Note  C#  1       125    33

  <      >                           Exec
```

FI <
F2 >
These move the cursor across the event line of the display, between Bar, Beat Step, and Event. Turn the Value dial to adjust each parameter.

F8 EXECUTE
This inserts the event (you will hear it if it is a note) and returns to the Event Edit screen.

F5   REPLACE
Replace is similar to Insert, except the current event is replaced. See Insert, above.

F6   TRACK
This jumps up to the TRK indication at the top of the screen, where you can select another track to edit.

EVENT TYPES

NOTE
A note event has a pitch, velocity, and duration.

POLYPHONIC KEY PRESSURE
Aftertouch messages for individual notes. A Poly Pressure event has a pitch and a pressure amount.

The K5000W neither transmits nor responds to these messages.

CONTROL
A Continuous Controller such as volume, Pan, Sustain. A control event has a controller number and value

PROGRAM CHANGE
Changes to a different patch. A Program Change event has a program number.

CHANNEL PRESSURE
Standard keyboard aftertouch. A Channel Pressure event has a value.

PITCH BEND
Usually generated by the pitch bend wheel, a Pitch Bend event has a value.

EXCLUSIVE
System exclusive data, such as patch data or other information unique to a particular instrument. A System Exclusive event has 16 Bytes of data, labeled 2nd through 16th (the first is the Exclusive message itself).

TEMPO (ONLY ON THE TEMPO TRACK)
Changes the tempo. A Tempo event has a value from 10 – 300 beats per minute.

L4   SONG COMMON

Enter the name of the Song from this page.
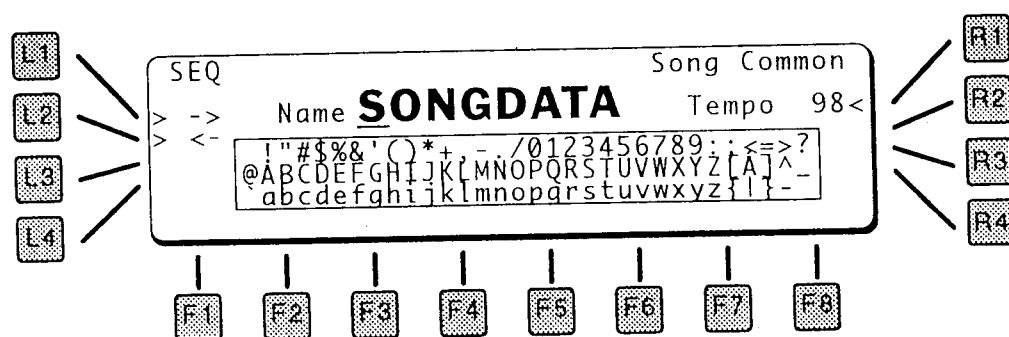

LI and L2 select which character is selected, the Value dial selects the desired letter or number.

RI   TEMPO
This sets the initial tempo for the song.

R1 TRACK INITIAL

These set the initial values for each track in the Song.

```
┌─────────────────────────────────────────────────────────────┐
│ SEQ                                    Track  Initial        │

└─────────────────────────────────────────────────────────────┘
   F1     F2     F3     F4    F5    F6    F7     F8
```
The L1 — L4 keys select one of the four visible tracks, the F1 — F8 keys select a parameter, and the Value dial adjusts it. The TRACK arrows scroll up and down among the 40 tracks.

F1 CH. HIGH
This sets the channel to play Internally on the K5000W or Externally on a connected MIDI device.

F2 CH. LOW
Sets the MIDI Channel for this track. A and B stand for the MIDI A and MIDI B ports on the rear panel.

F3 SINGLE
Selects a Patch number and name for the track. You can also use the Patch Select buttons to choose a patch.

NOTE:
Program changes recorded on the track don't change this initial setting.

F4 VOLUME
Adjusts the initial volume for the track.

F5 PAN
Adjusts the initial left-right pan setting for the track.

F5 COARSE TUNE
Adjusts the initial pitch of the track, in semitones.

F7 FINE TUNE
Adjusts the fine tune of the track.

F8 MORE
Displays more settings...

```
┌─────────────────────────────────────────────────────────────┐
│ SEQ                                    Track Initial         │

   F1     F2     F3     F4    F5    F6    F7     F8
```
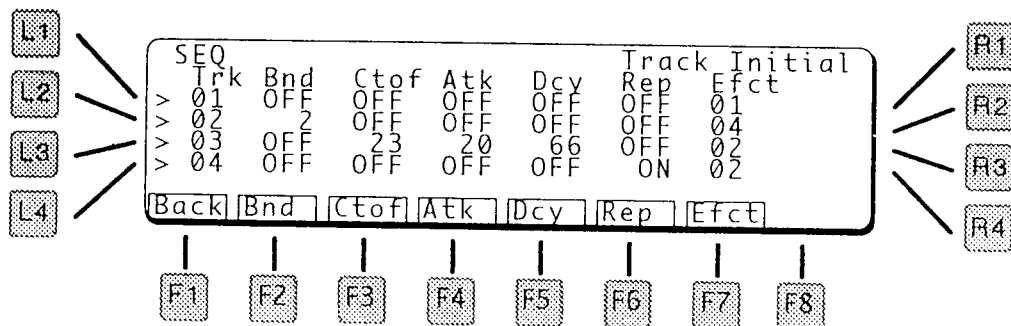

FI   BACK
Goes back to the first page.

F2   BEND
Sets a pitch bend depth for the track. This defines the maximim range of the pitch bender, up to 24 semitones.

F3   CUTOFF
Sets an initial filter cutoff setting for the track. This modifies the patch as used in this track.

F4   ATTACK
Sets an initial envelope attack setting for the track.

F5   DECAY
Sets an initial envelope decay setting for the track.

F6   REPEAT
If on, this track will loop.

F7   EFFECT PATH
Sets the effect routing for the track.

Effect Path routes the Section to one of these Effect inputs
R2   EFFECT

Jumps to the Effect section, see page 79.

NOTE:
The default effect settings for a new song are the same as for General MIDI. A list of these settings can be found on page 155.

DISK PLAY

The Direct Disk Play function lets you play songs play directly from disk, without loading them into the K5000W. You can assemble your favorite MIDI songs on a diskette, then play them one after another.

If your MIDI file contains Karaoke-style lyrics, they will appear on the screen as well.

NOTE:
The Disk Play function reads only single track Standard MIDI Files (.MID, type 0). Most sequencers (including the K5000W) can save files in this format.

TIME SIGNATURE
of current song

TEMPO
of current song

CURRENT SONG

```
Direct Disk Play
> Song  Interface      04/04  Tempo=100
                       REP OFF  CHN OFF

CH01  CH02  CH03  CH04  CH05  CH06  CH07  CH08
 ON    ON    ON    ON    ON    ON    ON    ON
```

CHAIN PLAY
If ON, all the songs on the disk will repeat continuously, one after the other.

SONG REPEAT
If ON, the current song will repeat.

MIDI CHANNEL ENABLES
Turns individual channels ON or OFF.
Press Track Up and Down keys to see other channels.

AUTO PHRASE
GENERATOR (APG)

The Auto Phrase Generator or APG, creates patterns based on a track recorded in the sequencer.

WHAT IT DOES

APG takes *one* of your recorded tracks, strips out the chord changes, and then imposes those chords on a preexisting pattern of rhythm and accompaniment. The result: a lively band playing *your song!*

After calculating the new parts based upon your chords and the designated pattern, the APG copies those parts onto as many as eight tracks of your already existing song. You can then pick, choose and edit the parts just like tracks you recorded yourself.

WHAT IT DOESN'T DO

Well, the APG can't think for you. It can't tell which notes you intended to play and which were mistakes. It can't figure out what chord you're playing if you *don't play the root until halfway through the bar!*

Think of APG as a top-forty band that you just met on stage. You hand them a chord chart and ask them to play in the style of *Hootie and The Blowfish*, while you sing your new song in front. The result? A little loose, a little ragged, but you'll all get to the end of the tune together. *And with a couple of rehearsals...*

STRATEGIES FOR BEST RESULTS

Keep your playing simple. Thin out the passing chords, the trills and little flourishes, the APG adds its own. Make it easy, as if you were teaching the song to someone.

PLANTING THE SEED TRACK

First select the track to be used as the chord source – the Seed Track. You can use the entire track or a section.
L1 START BAR
Sets the starting bar of the Seed Track.

L2 LENGTH
Sets the number of bars of the Seed Track that will be analyzed.

R1 SEED TRACK
Selects which track in the current song will be used as a chord base.

F7 ANALYZE
Extracts the chords from selected seed track. This process takes a minute.

TRACK SELECTION

This screen assigns each part to a track in the Song.
Select the Track with the L and R buttons, then use the Value dial to change the channel. A "−" will appear in the display if the selected channel already contains data − you might want to select another track in this case.

You can turn the track off by pressing the button again. The display will read Off, and a phrase will not be generated for this track.

STYLE SELECTION

This is where the fun begins. This screen contains the style templates. There are 107 templates, including two that loaded from disk. The styles are listed on the next page. In addition, each style has six variations and six fill patterns.
Select a template using the Value dial, then press F8 (Continue) to access the variations and fills, below. You can play the phrase by pressing the START button.

APG TEMPLATE LISTING

Each template pattern has six variations, that are sometimes quite different from each other. Press the F2 – F7 keys to select a variation.
L3 EDIT CHORD CHANGES
You can view or edit the chords created from the seed track analysis, see below.

L4 BEGIN AGAIN
This takes you back to the Seed Track screen, where you can start the process over again.

R3 WITH PROGRAM
When this is ON, patterns will change to their programmed patches. If OFF, the patches will not change.

R4 PASTE
When you are happy with the created patterns, press Paste to copy them into your Song.

F8 VARIATION
Displays the Fill in Page, where you can select various fills to go with your pattern.
EDIT CHORD CHANGES

If the resulting APG pattern is too harmonically *twisted*, this can sometimes be straightened out by adjusting the chords.

Press **L1** and use the Value dial to scroll through the chords. If a chord is off, use the function keys to edit it.
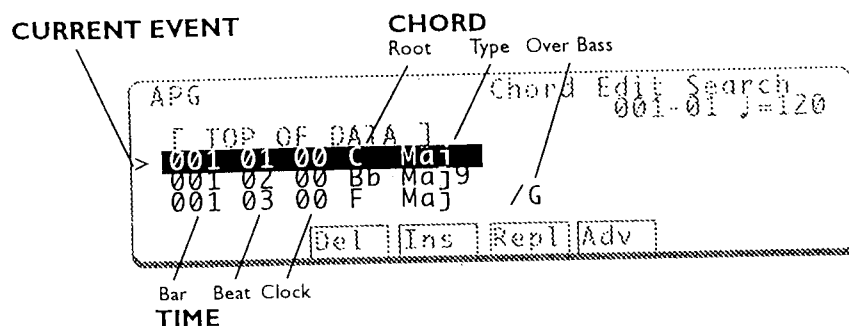

There are two editing modes: Edit and Advice. If Advice is used, the K5000W will make suggestions. **F6** switches between the two modes. See Chord Advice, next page.

F3 CHORD DELETE

Deletes the current chord event.

F4 CHORD INSERT

Inserts a new chord. The following screen appears.
The chord and location inside the box will be inserted. Use the **F1** and **F2** keys to select a parameter and the Value dial to change it.

Press Execute (**F8**) to complete the insert or the EXIT button to cancel.

F5 CHORD REPLACE

Changes the current chord event.

```
APG                    Chord Edit Replace
                          001-01  ♩=120
  015 01 00 C          /Eb
 >016 01 00 C          /F
 > ┌─────────────────────────────┐
   │ 016 01 03 D add9   /E        │
   └─────────────────────────────┘
    [ < ] [ > ]            [Adv]        [Exec]
```
The chord will be replaced by the settings in the box. Use the **F1** and **F2** keys to select a parameter and the Value dial to change it.

NOTE:
You cannot change the time of the chord. If you want to change a chord's time, delete the chord then insert a new one.

Press Execute (F8) to complete the change or the EXIT button to cancel.

F6 CHORD ADVICE

Choosing Chord Advice enables the chord suggestion feature. After setting preferences here, several chords will be suggested when inserting or replacing.

```
APG                    Chord Advice Search
                          001-01  ♩=120
   ┌ TOP OF DATA ┐
 > 001 01 00 C                          Key <
   002 01 00 C          /A               GRP <
   003 01 00 C          /F       (C  :Straight)
            [Del] [Ins] [Repl][Edit]
```
Chords will be suggested based upon the following preferences:

R1   KEY
Set the key of your song here: C through B, and major or minor.

R2   GROUP
Select the type of chords you prefer:

STRAIGHT
These are more simple chords: major, minor, sevenths, etc.

COMPLEX
The chords that will be suggested in this case are more complex jazz chords: ninths, elevenths, flat sevenths, etc.

CHORD ADVICE INSERT

When advice is on, pressing Insert (**F4**) displays the following screen instead:

```
 APG                Chord Advice Insert
   [ TOP OF DATA ]           A  m
  >001 01 00 C               A  m7
                             E  m
 >[002 01 00 A m        ]  (C   :Straight)
  [ < ][ > ]              [Edit]     [Exec]
```

A suggested chord is placed in the edit box. Use the Value dial to scroll through the other choices listed on the right side of the screen.

CHORD ADVICE REPLACE

When advice is on, pressing Replace (**F5**) displays the following screen instead:

```
 APG                Chord Advice Replace
   [ TOP OF DATA ]           A  m
  >001 01 00 C               A  m7
                             E  m
 >[002 01 00 A m        ]  (C   :Straight)
  [ < ][ > ]              [Edit]     [Exec]
```

A suggested chord is placed in the edit box. Use the Value dial to scroll through the other choices listed on the right side of the screen.

The phrase (style) conversion function is a unique feature which enable the K5000W to play the phrase (style) data made not only for Kawai's other instruments, but for many other manufacturers' keyboards as well.. The Style Convert Software was developed for the personal computers by EMC Software company, which has been the recent leader in this type of technology. In collaboration with EMC, Kawai has made it possible to run this software on the K5000W . When the Phrase Convert Software is installed, the K5000W becomes capable of reading many phrase data disks currently available on the market and converting them into Kawai's data format without losing musical quality. The converted phrase data may be edited and stored as the K5000W's own phrase data. With this feature, you can expand your library of phrase data. Please read the instruction sheet that comes with the Phrase Convert Software disk for information on the format that works on the K5000W.

Operation

Loading APG DATA CONVERT Software

1. Insert APG DATA CONVERT Software.

2. Press DISK button.

3. Press **L2 (LOAD)**.

4. Press **R4** (APG DATA CONVERTER).

5. Select which data to be converted with **VALUE DIAL**.

6. Press **F8** (EXEC). The screen shows "SURE?".

7. Press **F8** (YES) again for execution.

8. Take out APG DATA CONVERT disk.

Loading STYLE DISK

1. Insert STYLE disk.

2. Press **F8** (EXEC). The screen shows "SURE?".

3. Press **F8** (YES) again for execution. (Depending on the style disk, you may be able to skip this step.)

4. Select desired style with **VALUE DIAL**.

5. Press **F8** (EXEC).

GENERAL MIDI MODE

When the K5000W receives a General MIDI On message, it jumps into Compose mode and configures itself for General MIDI playback.

WHAT IS GENERAL MIDI

General MIDI is a multi-platform standard for musical instrumentation. The sonic counterpart to Standard MIDI Files for sequencers, it specifies that specific instruments are available at specific program numbers. This way, you can compose music using a Grand Piano, a Muted Guitar, and a Picked Bass; and be sure that the listener will hear a piano where you intended – instead of a flute.

ADVANTAGES OF GENERAL MIDI

Since MIDI sequence files (SMF) are very small (50K is an average size, *one second* of CD-quality audio is several times bigger), they are easily transportable – as many as 30 fit on a single floppy disk – so they can be enclosed in an e-mail message or used as background music on a web site or a CD-ROM.

This is because the MIDI sound module is doing all the "work", creating an audio experience from the recorded performance. Although there are many models of General MIDI sound modules available, they all adhere to the General MIDI standard of compatiblity. Naturally they all sound slightly different – just as different bass players will sound different – but each General MIDI device sounds similar.

DISADVANTAGES

There are two main disadvantages:

1) All General MIDI devices *do* sound slightly different, and one of the biggest differences is in the subtle balances between instruments in a mix.

2) Since the available instruments are fixed, you cannot use original sounds – especially the very original sounds in the K5000W's A Bank.

GENERAL MIDI EFFECTS SETTINGS

These settings are used whenever General MIDI mode is initialized. They can be changed, but will be reset the next time General MIDI mode is initialized.

ALGORITHM

```

The result of these settings gives four useful sets of effects for instruments:

Instrument Type	Effect Path	Chorus	Reverb
Strings	1	Hi	Hi
Piano	2	Lo	Hi
Guitar	3	Hi	Lo
Bass, Drums	4	Lo	Lo

QUICK MIDI

The following MIDI messages can be sent from this page. Messages are sent on the MIDI System Channel, set in the System MIDI page. The MIDI System Channel is shown at the top of the screen.

```
Quick MIDI
         TRNS CH A01
> Volume          127    Program        127 <
> Pan             127    Bank           127 <
> Control No      100    Bank System    Norm <
> Control Value   127
                                  [Send]
```
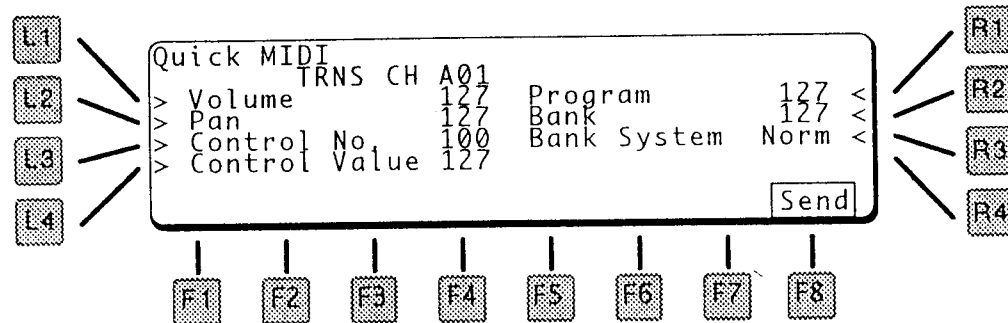

LI VOLUME
Sends a Volume message using Continuous Controller #7.

L2 PAN
Sends a Pan message using Continuous Controller #10.

L3 CONTROL NUMBER
There are 128 Continuous Controller channels in MIDI. Some, like the Volume, Pan, Sustain Pedal, and Bank Select messages are commonly used by all instruments. Other controllers are more specific and are used for everything from synthesizer parameters to automated mixing to controlling stage lights or even a VCR.

This parameter selects one of the Continuous Controller channels for control (0 to 127).

L4 CONTROL VALUE
This sets the *value* of the message sent to the Continuous Controller channel selected above.

RI PROGRAM
Sends a Program Change message, which tells a remote instrument to change to a different sound patch. There are 128 Programs available, numbered from 0 through 127.

R2 BANK
Most recently made instruments contain more than 128 patch programs in memory. MIDI gets around this limitation by dividing the available sound programs into several *banks of programs*. Use the Bank and Bank System messages to specify which bank to switch to. Within an individual bank, the Program Change message can be used to select individual programs.

R3   BANK SYSTEM

The Bank System parameter selects the type of bank select message to send.

NORMAL
Normal – the bank message is sent by itself

1 (MSB)
MSB – the bank message is sent with an MSB indication.

2 (LSB)
LSB – the bank message is sent with an LSB indication.

F8   SEND

This transmits Bank and program change messages.

COMMON

In the Common area of the front panel, to the left of the LCD, contains controls for parameters that concern the entire instrument.

SYSTEM SECTION

The System pages offer preference settings, that control the general behavior of the K5000W.

The five Function keys (F3 – F7) jump between the four sections of the System parameters

F3   RESET
Goes to the reset page.

F4   BACKUP
Goes to the Backup page.

F5   MIDI
Goes to the System MIDI page.

F6   SYSTEM
Goes back to the main System page, below.

F7   DUMP
Goes to the MIDI Data Dump page.

SYSTEM
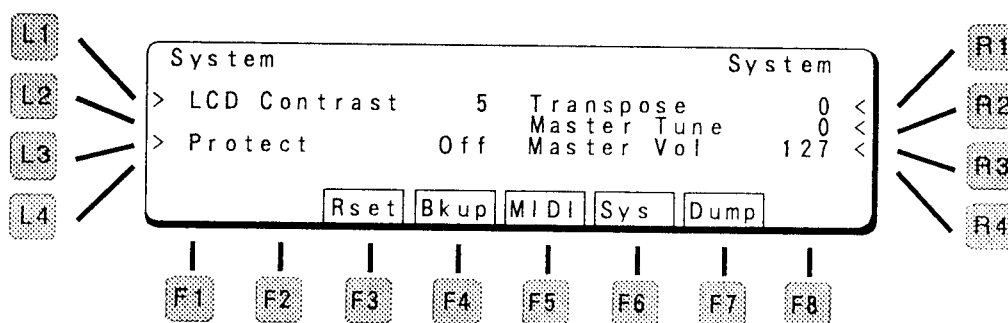

LI   LCD CONTRAST
This adjusts the contrast of the LCD display. Adjust it so the display can be seen clearly.

L3   PROTECT
This turns on the memory protect for the internal program memory. When Protect is on, sound programs can not be saved to internal memory.

RI   TRANSPOSE
Master Transpose for the instrument.

R2   MASTER TUNE
Master Tune for the instrument.

R3   MASTER VOLUME
This sets the MIDI master volume for the instrument, MIDI controller 7.

RESET

This function reloads all patches from the backup Flash memory. This would only be necessary to restore original patches after receiving a MIDI data dump or playing a MIDI sequence with recorded MIDI patch data.

BACKUP

This function saves all patches in memory to the backup Flash memory area. This is only necessary to save a MIDI data dump, since the patch dump data is written to the working RAM memory only.

MIDI

```
          System                          MIDI
        > Local              ON
        > Unit Ch            A 1
        > Kbd Trans Ch     Unit

              Rset  Bkup  MIDI  Sys   Dump  More
```
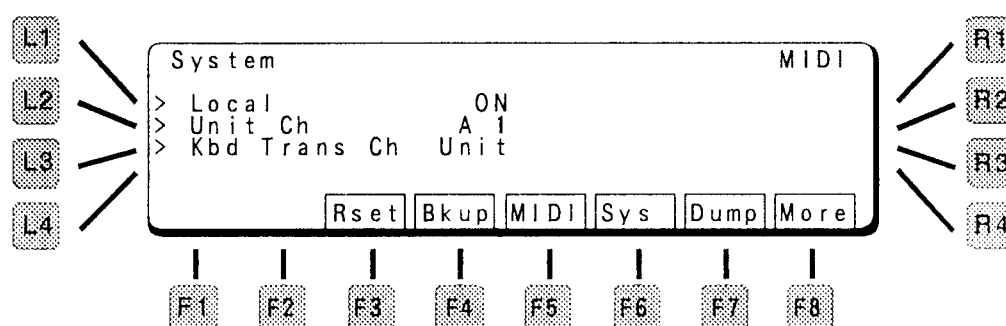

L1   LOCAL
Sets MIDI Local Control. If ON the keyboard and sequencer are attached to the sound generator. If off, the keyboard/sequencer and sound module are separated. Turning off local control is useful when an external MIDI sequencer is used.

L2   UNIT CHANNEL (SYSTEM CHANNEL)
This sets the basic MIDI channel for the unit.

L3   KEYBOARD TRANSMIT CHANNEL
Sets the Keyboard Transmit channel.

TRACK
In Single or Combi mode, the keyboard transmits on the unit channel. In Compse mode, the keyboard transmits on the channel of the selected track.

UNIT
If set to UNIT, the keyboard will *always* transmit on the Unit Channel.

F8   MORE
Goes to the next page of parameters.

```
          System                          MIDI
            Transmit           Receive
        > Program        ON  Program        ON <
        > Pressure       ON  Pressure       ON <
                             Exclusive      ON <

        Back       Rset  Bkup  MIDI  Sys   Dump
```
L1   TRANSMIT PROGRAM
If on, the K5000W will transmit program changes.

L2   TRANSMIT PRESSURE
If on, the K5000W will transmit aftertouch pressure.

R1   RECEIVE PROGRAM
If on, the K5000W will receive program changes.

R2   RECEIVE PRESSURE
If on, the K5000W will receive aftertouch pressure.

R3   RECEIVE EXCLUSIVE
If on, the K5000W will receive system exclusive messages.

DUMP

This page is used to initiate a MIDI System Exclusive file transfer. The program data is transmitted across MIDI.
L1   BLOCK
Selects which sound block to transfer.

BLOCKS
SINGLE A
The ADD sound bank.

SINGLE B
PCM sound Bank. (B070 to B117).

COMBI
Combination sound bank

INST
Drum Instruments (Kits are stored in Single B).

L2   ONE/ALL
Selects whether to select single program or all the programs in the selected block.

L3   PATCH NUMBER
If One is selected above, this parameter selects the individual patch to dump.

F8   EXECUTE
Initiates the data transfer. "Are You Sure?" Press YES (F8) to start, NO (F1) to cancel.

DISK SECTION

The Disk pages enable you to save your work on floppy disks. Whether to backup your patches, save a song for a studio date, load new sounds for another project, or import MIDI music files downloaded from the Internet, you'll find the K5000W's disk is your gateway to the outside world.

The K5000W uses the standard PC-Compatible file format, so files can be exchanged with PCs, Macs, and most other systems. The K5000W Sequencer reads and writes Standard MIDI Files (SMF, with the file extension .MID), so music sequences can easily be moved between the K5000W other computer sequencers.

Pressing DISK on the front panel brings up the Disk Menu screen, below.

```
Disk                              Menu
> Save                        Delete  <
> Load                        Format  <
```
There are four options for saving, loading, and deleting files, as well as for formatting new diskettes.

LI SAVE

This section is for saving the various types of files in the K5000W to disk.

```
Disk Save                         Menu
> Single                       Song  <
> Combi                 APG   Data  <
> Drum Kit
```
LI SAVE SINGLE

You can save individual Single patches or an entire bank to disk.

```
Disk Save                       Single
> All/One      ONE  Single No.    A001  <
  !"#$%&'()*+,-./0123456789:;<=>?
  @ABCDEFGHIJKLMNOPQRSTUVWXYZ[A]^_
  `abcdefghijklmnopqrstuvwxyz{|}-
     <    >      Runner      .KA1   [Exec]
```
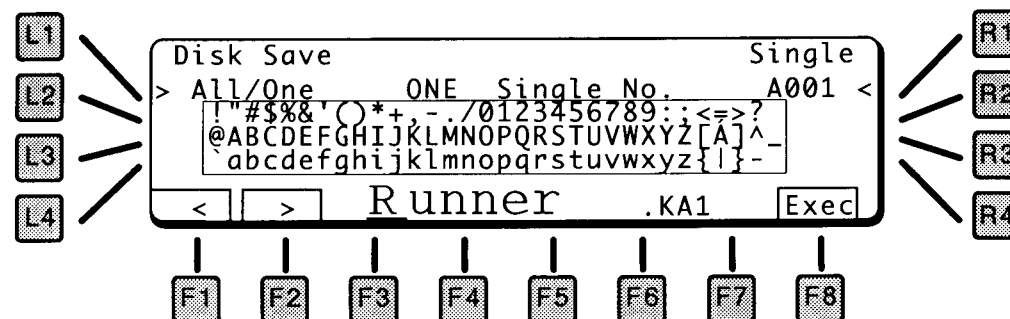

L I   ALL/ONE
Choose ALL the patches in a bank, or just ONE.

NOTE:
The single bank selected before entering the Disk Section will be the only bank available.

R I   SINGLE NO.
If you want to save one patch to disk, select the patch number here.

F I/F2   CHARACTER
This names the file on the disk. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8   EXECUTE
Press Execute to save the file. It will be saved with the file extension shown after the name. See page 160 for a list of K5000W file types.

L2   SAVE COMBI
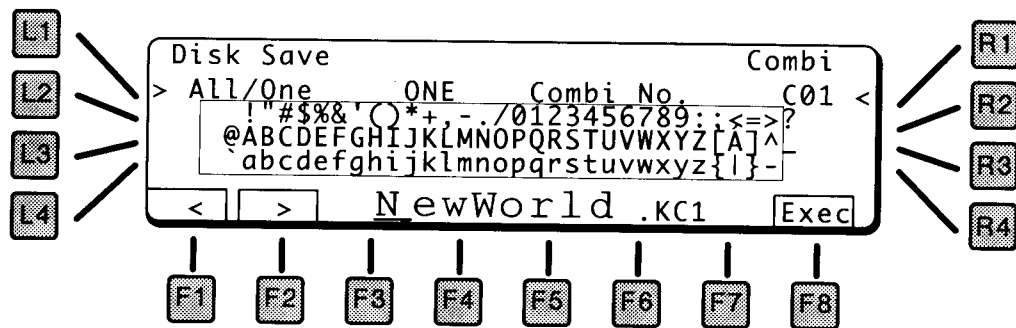

L I   ALL/ONE
Choose the entire COMBI bank, or just ONE Combi patch.

R I   COMBI NO.
If you want to save one patch to disk, select the patch number here.

F I/F2   CHARACTER
This names the file on the disk. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8   EXECUTE
Press Execute to save the file. It will be saved with the file extension shown after the name. See page 160 for a list of K5000W file types.

L3 SAVE DRUM KIT

This saves Drum Kit B117 to disk. This is the only editable kit, the others are preset. The individual instruments are also saved with the Kit.
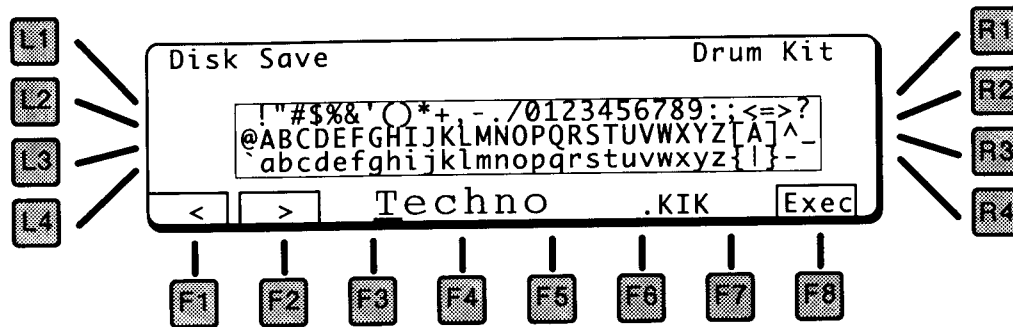

```
Disk Save                          Drum Kit
    !"#$%&'()*+,-./0123456789:;<=>?
    @ABCDEFGHIJKLMNOPQRSTUVWXYZ[A]^_
    `abcdefghijklmnopqrstuvwxyz{|}-
   <      >       Techno      .KIK   Exec
```

F1/F2   CHARACTER
This names the file on the disk. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8   EXECUTE
Press Execute to save the file. It will be saved with the file extension shown after the name. See page 160 for a list of K5000W file types.

R1 SAVE SONG

```
Disk Save                             Song
> Format      SMF      Song No.        1 <
    !"#$%&'()*+,-./0123456789:;<=>?
    @ABCDEFGHIJKLMNOPQRSTUVWXYZ[A]^_
    `abcdefghijklmnopqrstuvwxyz{|}-
   <      >      SONGDATA     .MID   Exec
```
L1   FILE FORMAT
You can save Songs in the K5000W's OWN format (.KSO) or in SMF (Standard MIDI File) format (.MID). Select the format here.

R1   SONG NO.
Select the song number here.

F1/F2   CHARACTER
This names the file on the disk. Use the F1 and F2 keys to select a character in the name (moves the cursor), and the Value dial to select a letter.

F8   EXECUTE
Press Execute to save the file. It will be saved with the file extension shown after the name. See page 160 for a list of K5000W file types.

R2 SAVE APG DATA

```
┌──────────────────────────────────────────────────┐
│ Disk Save                          APG Data       │
│                          APG Data No.       1  <   │
│  !"#$%&'()*+,-./0123456789:;<=>?                   │
│  @ABCDEFGHIJKLMNOPQRSTUVWXYZ[A]^_                  │
│   abcdefghijklmnopqrstuvwxyz{|}-                   │

└─────────────────────────────────────────────────┘
```
This formats a disk to be used by the K5000W. The K5000W uses the same format as IBM compatible PCs If a diskette is already formatted in standard PC format, then it is not necessary to reformat the disk.

L I   FORMAT TYPE
Choose the type of disk you wish to format: 1.4MB for High Density diskettes (2HD), 720KB for older Double Density diskettes (2DD).

F8   EXECUTE
This starts the format process. Are you sure? Press F8 to continue, F1 to cancel.

FILE FORMAT LIST

The following file formats can be read and written by the K5000W:

FUNCTION	DATA	FILE TYPE	FILE NAME	EXAMPLE	READ/WRITE
Save/Load	Single PCM	One	*.KBI	B120	o
		All	*.KBA	B70-B116	o
	Single ADD	One	*.KAI	A32	o
		All	*.KAA	A1-A64	o
	Drum Kit	One	*.KDI	B117	o
	Combi	One	*.KCI	CI	o
		All	*.KCA	CI-C64	o
	User APG		*.KPT		o
	Song	Own	*.KSO		o
		Q80	*.SNG		Read Only
		SMF (Type 0 or 1)	*.MID		Read:Type 0 or 1 Write:Type 0 Only
Direct Disk Play	Song	SMF (Type 0 Only)	*.MID		Read Only
		(You can Load a Type 1 MIDI file, then Save it to create a Type 0 file.)			
Style Convert			*.KCN		o
Operating System	Program		STMATE.SYS		Read Only

NOTE:
Q-80Ex format is not supported. Q-80Ex users will need to resave their files in Standard MIDI File format before they can be used on the K5000W.
