

KAWAI FIIB CONTROLS

Front Pickup Tone Character

In the center position the pickup EQ is flat. The up and down positions provide different combinations of EQ “cut” and “boost” to change the tonal character of the pickups. The cut/boost combinations are pre-set and cannot be changed as the tone character pre-amps are sealed in the pickups. While both the front and rear FIIB pickups and tone character pre-amps are the same, they will sound different because of their position under the strings. This is an Active EQ System and requires two 9-volt batteries.
